HI DENNIS,
YOU HAVE A GOOD ANT. SET UP!
SO GET ALL OF YOUR TESTING DONE AND GOTO DAVE'S SHOP AND GET THE BEST
AMP'S THAT HE CAN MAKE
4 YOU! DRIVE DOWN TO NC. AND GIVE IT YOUR BEST.....??
YOU KNOW YOU CALLED ME AND HAD ME MAKE YOU A AMP. AND I DID THAT 4 YOU..
THERE IS NO WAY IN HELL THAT I WOULD MAKE YOU THE BEST AMP. 4 YOU AND
SEND IT TO YOU 4 YOU AND DAVE WOULD RIP INTO IT AND SEE
WHAT I DO TO MAKE THEM GO LIKE HELL!!!!!

"I KNOW YOU AND DAVE TOO WELL"
I'M NOT TRYING TO TAKE ANYTHING FROM YOU OR DAVE...
IT'S JUST FUNNY THAT YOU CALLED ME TO DO THAT..
DAVE'S IS A SMART MAN AND I KNOW THAT HE IS ABLE TO MAKE SOME BIG
WATTS..
BUT HIS WAY OF THINKING IS THAT
THE PEOPLE IN THE CB WORLD DON'T
NEED MORE THAN HE NEED'S TO GIVE THEM!!!!!

I'M SORRY THAT YOU AND THE DAVE MADE PEOPLE HAVE'S TO TAKE THAT.
BUT YOU KNOW DAVE!!

HAVE A GOOD ONE MAN & I'LL SEE YOU IN NC.
"123"

>If mathamatical formula are not meant to be taken literally I don't know what
>it is.

So I guess every misspelled word, every grammatical error, every
oversimplified concept has to be taken literally? Can't you figure out
the true meaning of a post even if it is misspelled, or mis written,
or conveyed in an improper way?

May be you can't, so i'll do it for you:

SWR = Pfwd : Pref

10KW from a 3cx3000a7 is more than possible in a mobile. You can get 10KW from that tube as a base set up from 220V with a good power supply.

Hi Everyone;
I just want you all to be aware that I had called roly4955 yesterday and told him I would take the amp. He said OK. I just bought a Wilson 5000 today for that amp. I was going to drive to Miami to pick it up at the end of this week. I see he put it back up for sale again.
It leaves me to 2 conclusions:
1--He doesn't believe me or
2--He doesn't want it to BE SEEN
BUYER BEWARE!

From: John <mrbreezej@netscape.net>
Message-ID: <38CAE61E.96E67550@netscape.net>
Source record: 26738

I have just engineered a modification to the standard swing mod for the RCI 2950/2970. Here it is:

1. Parallel R285 with a 1N4148 fast switching diode, cathode to emiter of Q52
2. Parallel R280 with a 4.7K ohm resistor
3, Parallel C299 with a .1uf capacitor 50WVDC (use two if you have a low frequency voice)

If you want a technical justification for these changes email me and I will send along a technical description.

John

hey slick, as i have said before, you don't have to go to a stupid keydown to know what is going on there. and no i am not going to go and pay money to pull up next to someone and expose my expensive equipment, not to mention myself to some drug dealer's class c emissions, good buddy. and as i have repeatedly told you , i have friends that used to go to these things in the eighties and they told me all about it. and you know what, it doesn't interest me in the least. now , i like amps, and i like rf theory, of which there hasn't been that much lately around here, so spare me the absurd references to we this and we that, because you don't run nothing but your mouth. now you sure have a pretty little truck there, but so what. cb radio is a lot of things to different people and the last time i checked , the title of this ng was cb radio ng, which means citizens' band. and for twenty some odd years , we talked about anything and everything and not one time , did i ever hear anything about keydowns ,until i wondered into this mudhole one day. so excuse me if i get a little bored hearing you talk about this bullshit keydown stuff all the time. it is a waste of time and money and doesn't prove a damn thing and you know it. the only reason, i repeat the only reason you hang around here is for some purpose and that purpose , is probably that you are profiting from this ng somehow. you get these kids all pumped up about this stuff and the next thing you know orders are coming in. now i find it interesting that you consider yourself a member of the red shirted goosy boys, but you say

you make your own amps. well that is funny, because that picture on the internet, of your truck with the amps in it, you know, the amps that look a lot like goosy amps, well that would tell me that you aren't being truthful about what you say. and don't tell me , your picture hasn't been on the net because it has, and friend , you look like you are a brick short of a full load and you couldn't poor piss out of a boot with the instructions on the heel. so thank you , please don't worry about what you consider to be my fans, because i have absolutely no idea what the hell you are talking about. i am my own man and i do as i want and as long as i don't step on your toes , i see no problem in issuing my opinions. now what a boring cb world this would be , if all we had to listen to was some idiot in dallas keying up his goosey amp and talking on his radio. yada, yada, yada. take care mudduck, go play with your silver bullet and leave the thinking to the pros. this is big strappin curious and i am back quiet.....

4128. Re: tunning a tube amp ?

Newsgroup: rec.radio.cb
Date: 2000-03-12 00:00:00 UTC
From: Billy Bob <BigtimeR@dio.org>
Message-ID: <9vDy4.15919$kO5.85228@typhoon.tampabay.rr.com>
Source record: 26747

Start with low input power, tune the plate for maximum output(at that
power input) then tune the load for maximum output. make minor adjustments
to each, one at a time, until max output is achieved with the low input
signal. You can then use the driver(radio) to increase your output from the
amp. Hopefully you know what the max input for the amp is, otherwise you
risk damage no matter what the position of the dials. The basic rule is to
tune the amp to max output and vary the input with the radio.
If you don't know the particulars of the amp, stay conservative, observe
any red lines on the meters, and stay away from them. Start with LOW power!

==========
Yes i wanted to see these big watts you are claiming, you told me your 3 pill did 450 watts at 17 volts when it left your shop it didnt even do that at 21 volts, so again you were out to fuck someone by telling me bogus watts do you do this with everyone??

> >If you didnt give BB his amps for free he would still win with what he
> >already has. Get Real.....
>
> Nobody gets anything free, now do they Dennis. He may be able to win with Dave
> products, he just wins by a wider margin with "MoWatts" ;)
==========
Well the only guy who got anything for free was your education at daves we know you are blowing BB because he has the big antenna system and if he wins you can say it was your amplifier. He would win with a texas star a win is a win. but we shall see If your amps are so bad you would key yourself Ill give BB back the gold boxes and you run your Mowatts and see who comes out on top. You may fool the some of the people but I know your game. I hope all the shit you are talking doesnt backfire on you at the break. remember "Maywood Break"

Are you saying that peekabo, 703,drifter and the rest of the guys arent going to win it is just BB with his big bad antenna system and his foxy boxes + mowatts boxes . So what you are saying it should be an all mowatts final in every class? If these boxes are so bad you should dominate correct. I love a good challenge.

Source record: 26765

FWIW, I have done the swing mod from the RCI Federation page. It retains all stock parts and adds 4700 uF in series with D92 to VR11 at Q48. I put the mod through a DPDT switch on the rear panel so it could be disabled for SSB use. It appears to be designed to change the driver bias range to allow less key and more swing for driving modulators or small amps. All signal reports have been very favorable on mine, and there was no alteration to the PCB other than lifting one leg of the diode and adding the capacitor in series. I used two 2200 uF in parallel which I insulated in 2" shrink tube and tiewrapped to the left side of the chassis using the holes already there.

My description is poor, and I would suggest getting the mod from the RCI Federation Site. The results are worth the small effort, and there is no overmodulation. splatter or overly wide signal introduced as a result of it, as there is with mods that modify or remove the ALC protection circuit. If anyone has ever run a Regency Range Gain Tube rig from years gone by (Double Sideband - Reduced Carrier), the results of this mod will be familiar.

Thanks Andy,

Got it done . . . don't care for the swinger type of mod I am using

1-22 RMS Bird on a 25 slug
52 PEP Bird on a 100 slug

to darn much audio

nice compression

recieve swap it for the ol grant export/142 recive

hot but noisy

maybe somebody will be friendly :¿P

drive the dickens out of anything

pull ALL the caps closer to the board . . .

it will be a competitor in its class

SSB is hot as well

Thanks Again . . .

Although I'm not familiar with the mic you are referring to (the Adonis 508E/ RF limited)..., I had the same problem with my RCI2950, and an Astatic 575m6 mic...in my mobile.
I custom installed the channel change push-buttons on the top...before testing it out.
Some mics don't work well with this radio..I put on a D104M6B, and ...it was like night and day. LOUD, crystal-clear audio...with the mic set on 1 1/2!! try another mic.....(the D104 works well)
If it works, sell the Adonis on EBAY...Those Fred Sanford Packrats will buy anything!!!!

If it sounds "overdriven" when it is turned way down it may be distorting in the mike amp instead of overdriving the radio. Wen I used to work on CB's I had a little box that I could plug most any type of mike into so I could hear what it sounded like or looked like on a scope. I used to let customers come around and plug their mikes in for free. I don't know how common this is but seems to me other CB shops should have something like this. Wouldn't count on it being free though.

No modification of type accepted radio equipment has occurred or was suggested. The problem is that for it to be used on CB it needs that acceptance, not the other way around.

YOU CAN TELL ALL OF THE PEOPLE ON THE NG. THAT YOU CALLED ME AND THAT IS
WHAT YOU DID.............!!

YOU WERE ON THE PHONE WITH BB IN FL. BEGGING HIM 4 MY PHONE NUMBER AND
ASKING HIM IF HE WOULD TALK TO ME TO MAKE YOU SOME AMP'S!!!!!!!!!

SO YOU CAN'T PLAY THIS OFF LIKE YOU ARE THE GOOD GUY HERE..

I'M SORRY DENNIS BUT YOU CAN'T MAKE MY SHIT STINK..
YOU ARE ONLY MAKING YOUR'S STINK..

SO WHY DON'T YOU GO DOWN TO THE WAWA AND GET A BOX OF FUCKING PUFF'S MAN
AND QUITE YOUR CRYING....

AND DON'T FOURGET THE PAPER'S THIS TIME.......HEHEHE..

AND
I'M BACK OUT<><><><><><>

Message-ID: <8afp71$ah7$6@bashir.peak.org>
Source record: 26779

Handy Andy <CodysPC@iserve.net> wrote:
: Greetings!

: Bill, we may be onto two different things...

: When an amp is bypassed, the SWR should be what the radio and antenna
: see as one system.

It would be - if the bypass had a characteristic impedance of 50 ohms.
This is rarely the case.

: When the amp is on, this is the thingy [sic] Im' talking about...

: The amps own mis-match when it's under operational conditions.

: And this effect can be multiplied many times to show what appears to
: be a bad SWR is really due to the impedance mis-match the amp produces
: in the circuit when it's in operation.

: The impedance problem at the amps own front end, can affect the
: output.

It affects the input level to the amp, and thus the output level. It does
NOT affect the SWR on the line between the amp and the antenna.

Your output power should not change enough with a 1.7:1 SWR to matter.

Source record: 26785

I can backup what Larry says below.

I have a couple of home brewed Skywalkers from Lee Martin. My 8-pill is maybe somewhat untidy having four 2-pill boards and with all those link wires. I never was that neat!

Two other guys are now offering copies of the Skywalker so they cannot be that bad.

Mine work well.

This is a great way to learn basic amp theory and at the end to have built an amp understanding how it works.

Phil / UK

What is this I've heard about a bill in congress to allow the local authorities to enforce cb regulations? Supposedly they have reinstated the licence requirement but the FCC is not issuing any for cb. So if that's the case it won't be long and you'll have some local deputy dawg banging on your door and confiscating your equipment for illegal operation!!!!! Anyone interested I found this at Shadow@Bigradios.com Any comments gentlemen?

People in America DON'T know the difference between CB and HAM radios. I have even talked to "hams" who describe their hobby in most confusing ways, even refering to radio equipment and components in terms that EIA (Electronic Industry Association) savvy technicians would not recognize! These folks may ACTUALLY think that they ARE hams! So, in the beginning we have a problem of indentity! So, would an officer who comes out of such an ignorant society know anything about radio?

Yea? Well if you are in the good ole U S of A then I got news for ya!
Yer illegal at 300 foot, if that is where your antenna height is pal.
How do you differentiate between an illegal amp and your illegal height?
Just curious!

Has anybody ever had the sideband go out of a RCI 2950, 2970 Emperor TS-5010 or a President HR-2510? I know they are all in the same family of radios, I was just curious how many people have lost it in their radios. While I'm asking, how about the same question for a 2980, 2990, 2517 or 2527. Heck, if you've lost in ANY of your radios, tell me about it, I'm curious as to what radios are the most prone to ssb loss.
Any help is greatly appreciated.
Matt W.

You are probably correct there Barry. I am following this one real close, as the outcome just may surprise some folks. It isn't the fact that they will come to the aid of some "Italian cbers", but they may collectively gather enough complaints to warrant attention to the little yellow coward. The squeaky wheel gets the grease. High riding profilers like him ALWAYS get popped. It's usually only a matter of time. The fact that he is jamming a frequency that is worldwide utilized and allocated by different services MAY be the ticket for at least a nuisance charge, possibly a willful violation of international malicious interference. As you stated, the operators stateside also thought they had no rights concerning this a$$hole, but lo and behold, many ops who are legal and are just avid LISTENERS were NOT afraid to send signed(and, in a few cases, notarized) complaints to the FCC. Latest happenings: Calls and letters from the AT's(and others) are flooding Maricopa County's zoning office. They are looking to see if the punk boy is in violation of any local zoning ordinances. There are many other avenues waiting to be explored. One step at a time. After all, it IS only a matter of time. One way OR another.....

Hello Bo,

LOL

I was planning to be in Detroit the weekend following Dayton for Sonny's event. However, due to a work commitment I'm having to return home from Cincinnati, OH by the 24th.

I will try to get to Arkansas, but not able to confirm that date just yet.
>Phil. I more than confirmed it get your plane ticket ready, 1 alternator and
>way more than 10kw + awaits you in the USA
Did you design your own unit or what?

I do have a spare Henry RF deck, previously used as a plasma generator on 27.12Mhz. This has a 3CX3000A7 in it as stock. I also have another A7 and a 3CX2500F7.

Anyhow, I look forward to maybe seeing you at the above.

Regards

Phil / UK

Only if you are a 20 WPM Extra. Of the several HF rigs I've owned since the Novice Enhancements, every one of those which came from an Extra had been modified to run CB or other unlawful freqs. In one case, an estate sale, I had to buy replacement crystals to modify the radio BACK to ham (the 10m band had been changed to 11m), and his widow said that that was the only radio he ever used.

I really dont have alot of time to sell the amp and my expirience with selling large amps is that people want them but don't go through and buy it. It is not appreciated that this post is up alerting everyone on possible scenarios with this amp. Til I have the money in my hand I will continue to post her up for sale. Whomever wants to see the amp or test it is more than welcomed. This could also be a tactic of his to keep all others away from purchasing or inquiring about the amplifier. I just ain't going to stop posting it up just because you have told me you are coming to pick it up in the near future. To me the near future can be in 2 months. Point is that money is not in hand and for that simple reason I will CONTINUE to post it up until a buyer has come forward with the cash. Everyone wants a Mercedes but most cannot afford! I think that it is pretty unfair that a post like this has been put up and leaving other potential buyers scared of this amp! I am definitely sure that everyone would agree with me have they been the one selling and they come across this post. You did call me and we did speak but you gave no definite time period nor date on when you would come down to pick it up! All that was said on your behalf is that "i am calling my alternator people tomorrow to order me my 130 amp alternator and i'll let you know when i'll be able to come down". Well nowhere in that sentence does it specify when you were purchasing it. Once again this post is definitelty uncalled for and very childish. If you don't have the dough there is no go! Simple and end of discussion. Have a nice day....Roly

Does anyone know what tubes are used by the Palomar 300a?
I tried one many years ago, but I foolishly did not take the cover off and
check it
out as at the time there was no way I was going to use it. Now, I am going
for
my amatuer, and am moving out of the city and will definitely use it and the
same
rig has become available again--but I have no idea how hard it might be to
get
replacement tubes for it. I would appreciate any input.
Thanks for your time...

Excuse the mess here. New mail system and I am not sure how it is supposed to work.

We install Wilson Floating Ground systems on the Mack's, Sterlings, Ford(NLIP) and that usually fixes the whole problem. Running duals? No problem. Put one on each antenna and there you go. Quite trying to run wires all over the truck.

Its just a CB Radio. Get the Floating ground system and see how it works.

Wilson also has a NO Ground antenna. It is ok for about 20 channels. That has been by findings so far on the three I have tuned. Different trucks running them. Same results. But on the positive side it is easy for the consumer to get pretty close by moving the tuning spring up and down the stick.

Good luck.

Right On Peak!

There ain't no contest!

Besides, I think it is a case of envy! you have without a doubt, one of the best mobile set ups on the planet without going to a semi with a trailer full of generators like I had to power a whole comm center in them! (while I was working for Uncle Sam)

I remember going out and setting up a beam from my truck and having everyone cry
that I was cheating--I told them--hey, you can do it too! You're just mad cause you
did not think of it FIRST! They all had a cow the first time I went out and set up
a Golden Penetrator 500 as my mobile the first time. Of course I was also on
top of Capitol Peak when I did it. Everyone around was at or slightly above sea level and the Peak was at 2660 ft up. Nothing like a little edge!

COBRA 29 OWNERS
Like most radios, you can talk further than u here. Right?
Well not anymore thanks to the Recieve Genie
The Recieve Genie will virtullyDOUBLE the recieve on the Cobra 29 radios

without

all the add on boxes, cables strung out, etc.
With the Recieve Genie you have to make only 2 connections, simple as that, and its tucked away in the radio. Anyone can do it..

The Genie is only about the size of a dime
with 2 wires to connect
This is a very HOT NEW item now.

These are hitting the CB shops now and are selling for $19-$30 installed. We are offering these at introductury price of $10 each...

S&H terms:

1-4 pcs add 3$

5-8 pcs add 4$

9-up.... add 5$

For further info Email us at .... Caraudio66@aol.com

>>How many Freebanders would you guess are in the U S?

You cannot count the number of freebanders because there are more and more every day.
Lets see, would most peopleprefer paying hundreds of dollars on a Ham radio, say your (given not chosen)call sign every ten minutes, then have to spend time studying for a license, then have a set of rules that are so strict if you breath wrong you are in trouble
--OR--
Would you rather pay around 100-300 dollars for a freeband radio, not have to have a certain call sign, but have any handle you want, and talk to a lot of nice people that is interesting for free and not have to have repeaters and all that stuff?

The best all around antenna in my honest opinion is an "Antron 99" but if you have some room for a little bit bigger antenna, try to look for a "Penatrator 500" or a "Sigma 4". The last 2 are far better but are a little bit bigger. Figure about 204 inches wide for the ground planes and anywhere from 18 to 25 feet tall. The "Sigma 4" has no ground planes but looks like it has a tomato basket upside down on it. The "Antron 99" is easy to find and quick to install and can get them pretty cheap. Check here for the Antron 99: http://www.copper.com they were $37.50 each + shipping. $59.?? + for the antenna and ground plane kit.

I know I'm the fly in the ointment, but
amps are illegal to begin with. I have never used an amp, and with my
radio, I can talk all across north america on SSB, and probably 200+km
on AM. It's all in the antenna. I've got two Antron A-99's set up
with Inch and a half hard-line at 300 feet, with a differential
receive setup.
Yes, it cost me like 500 bucks, but it's well worth the price.
Mike

>What is this I've heard about a bill in congress to allow the local
>authorities to enforce cb regulations?

The Bill would allow local law enforcement authorities to investigate
interference to consumer electronics.

There is a lot of controversy surrounding this proposal, as you can imagine.
We cover this in rec.radio.cb from time to time. It's probably time for an
update. I'll kick in some info when I have time. Others may have some status
reports they can contribute.

One caution: there is a lot of mis-information circulating. Good sources are
Popular Communications and QST magazines, along with the FCC and ARRL web
sites.**

QRM
**Although ARRL/QST do not routinely cover CB matters, the Bill you mentioned
is of interest to Amateur Operators because of the potential for uninformed law
enforcement personnel to confuse CB vs Ham operations.

Hey Guys,
This is so stupid it is not even funny. Cops Police the air waves! What next! It was cable theft last now they want us to police some guy on the air running a damn fire fird 500 and a coat hanger POS antenna. What the hell gives! I guess just busting crack heads, Drunks, and keeping the hoods from taking over a hood and stealing eveything in site is not enough for us to do.How about our image! Boy I can hear it now Did you hear the Damn cops took Bubbas Radio!Don't they have something better to do. Some real criminals to chase.Ya I can see it now I go up to Bubbas Trailer to take his CB Right!
Washington can do what ever it is up to us to enforce it. think about it who has more time on there hands the FCC or your local under stafed under paid Police dept. Besides most cops don't know very much at all about Radios trust me on that.

Yes it's true. Congress IS curently trying(again) to pass this bill. The sad part is,that if someone didn't like someone else, all they would have to do is call the cops and claim that they are causing harmful interference. Additionally, if you posess ANY TYPE of FCC license (ham,marine,GMRS,ect.) you are EXEMPT from any station inspection by local authorities. I read it in Pop 'Com and M.T. a fews months back.

Well, the Captain definitely used to lock it down for a few, sometimes 30 minutes or more it seemed. 30 db all the way to NC, from time to time. I loved to hear him get on the guys that had to keep working on their stuff, claiming that the solder was dripping out, and they had to stop to fix it to talk some more. he would talk about them, telling them to get a real tech, some real stuff to talk on, and then they all began to try to key on him. He had a way of getting his competition riled, as I could hear them keying on him, but they couldn't very often take him out. Once in a while I could hear Prime drop that maul on him, though...and sometimes Big Daddy Kane from the killing fields. Those three could all plug ears on the east coast at will.
<<<<<<<<<<<<>>>>>>>>>>>>>>>>

Hello all,
I was just on the bowl and one of the boys on the cost told me that he had a operation and had a heart attack. I am sorry to hear that.
Boss had a maul but he also had personality as well. I will miss hearing him on the Bowl.

I ran an Antron-99 with a ground plane kit on a 36ft. mast on top of my roof. It did well. Now I run an I-MAX 2000 only on a TEN foot mast on top of my roof. The IMAX smokes the Antron. Even though it's 16 ft. lower.

I wish SWR meters were called something else besides SWR meters. They don't measure SWR at all. What they really do is measure input impedance and compare it to 50 ohms in the form of a ratio. However knowing the input impedance at the radio end of the line is a lot more useful than knowing the SWR no matter what you call it. There are only 2 times when they actually read SWR. When the line is matched to the load and SWR is 1:1 and line and load are 50 ohms coax can be any length. The other is when coax is a multiple of .5 wavelength and impedance of load does or doesn't match the line. All other times the SWR reading is wrong.

X-force you say too use
certain length coax for swr,
but the experts here in the
ng say coax length has
nothing too do with swr.
what are your comments.

: the true meaning of a post even if it is misspelled, or mis written,
: or conveyed in an improper way?

: May be you can't, so i'll do it for you:

: SWR = Pfwd : Pref

This is better, as it shows the SWR as being some unspecified rations of the two reference power levels. Still not good - as that ratio is added/subtracted from 1 to produce another ratio - which finaly gives the SWR.

But the original post showed Pf divided by Pr - which is absolutely not the case.

If you want 40 up and 40 down, get the Expo. By doing the PLL Mods,
you will get more channels but not 40 down. The PLL mod gets you like
15 down and about 80 up. You can also get a total of 128 channels if
you mod it the right way by getting all the A channels and covering
from 26.815 to 28.085.

You've convinced me.

Sounds like a neat, compact mobile set-up.

Sure would save a whole bunch of dollars over an engine bay with 6-8
alternators and all the extra hardware and wiring to go with it while
still being able to 'run with the pack'!

Tnx

Phil / UK

Hi,

I am trying to restore a non-working A.R.F. Products, Inc. ARF-2001 Scanning Transceiver. I am looking for a source for service and operation manuals for this rig, or copies, reprints; whatever is available. I will pay purchase price, postage and or copy expense to get any info on the rig, it's operation and /or service info. Any help appreciated.

No and think about this. If you had to deal with the worst of them
would you really care about a CB radio. Most cops do not understand how
there own radios work.

51,
This is such a joke. I could care less about bubba and his fire bird 500.
I care about my beat the people, there safety, property, basic peace. I care about the respect and trust that they give to me. We all know as Law Enforcement Officers laws are enforced on a community only as much as that community will allow. If the FCC or who ever decided to allow us to have that power to take amps so on who would want to take the chance of being sued. The Department? Officers? We have enough problems. I guess if bubba was a asshole and was just ripping up a trailer park and I was getting called out there everyday 7 days a week it would piss me off. I believe there are ways to handle that situation on the books now. I don't think checking stations would be practical. I have a base I run Johnsons.I have 2 rangers and a Valiant. I like restoreing them. I do not talk much on at home I listen more now.I will say Butter Bean has not always been my 28.Some of you my know me for my days in the heath kit country. I got bored with keying up ******watts and slamming the old bird and so on. I like being the under dog, I like talking skip on the bowl in a mobile. I guess by know everone knows what I do. Yes 51 I know there is some 10-8 brothers out there. You can bet on one thing they probable feel the same 51.
Take care,
Bean

Hello Phil: Yes a good web site all right. But its at:

http://web.wt.net/~nm5k/acompari.htm

Mark (NM5K) in his Elnez generated pattern of the vertical antennas shows a little unknown fact about the vertical antennas in general. And that is that the verticals with ground planes, have a very wide useful angle of radiation or take off angle.

I have noticed that the 1/4 wavelength ground radials, 4 of them work so well that when they are increased to 8 ground radials, only a very small insignificant amount of gain is seen. And when the ground radials are lengthen to 3/4 a wavelength, the pattern is not changed! Bill Orr in his "Vertical Antennas" and I think the "VHF Handbook" says that 3/4 wavelength ground radials used with a 5/8 wavelength vertical element will be a much better antenna than a 5/8 vertical with 4 each 1/4 wavelength ground radials. Not true according to the patters generated by Eznec. I have run the 5/8 wavelength CB antennas like the Penetrator 500, Avanti Sigma 5/8, and the MaCo V5/8, without any success of improving the general 5/8 wavelength CB antenna. But I haven't tried 5/8 wavelength ground radials yet, huuuum ought to give this a try, ah!

Thanks for the tip Phil!

Jay in the Mojave

If I had known that the person giving the info knew what they were talking about I could guess it was a typo, an editing goof or just a mind fart. In the 37 years I have been envovlve in this stuff I have never heard SWR expressed as Pfwd/Pref even in the most general terms.Given this, NO, I can not guess at what you mean. If you don't know what you mean or how to say it you shouldn't get upset when you are asked to explain yourself or your statements are negatively critiqued. In other words "It ain't my fault you are wrong".

hi jay, i was speaking to a friend in the UK the other day on the lower part of 26 megs. he was comparing the a-99 without radials to a sirio antenna that had 8 groundplanes(maybe model 817?). i'm not sure about the model but the antennas were both at the same hieght and the sirio blew away the a-99 by about 2 s units on my yaesu. he said the local reports were about the same. have you ever seen or used one of the sirios?

This is directed at the original poster who rejoiced at this fellows mishap.

you amateurs had better be carefull choosing "big Brother" as your hero

There was once a woman, who really thought She was "making a difference." Time and time again, she would report her friends, family and neighbors to social services for child abuse when she seen children get spanked., or even yelled at.

She thought she was doing the right thing, and as a result of her Gestapo type actions, nobody liked her. She caused many innocent people to go through a nightmare with social services. She also secerety reasoned that "now I will be safe" Since she was constantly "throwing them meat"

One morning, Her 6 month old son died of crib death. Social services tried to nail her for murder. The same people that she was always running to telling on people, and She thought they were friends. But now, they were trying to send her to prison for something she had nothing to do with. Now She understood what those people was about.

The reason know this, She is my sister-in law.

the moral of the story

On the surface, "Telling big brother" about CB and other violations sounds "hip", and Good". Taking satisfaction from someone's misery like "Leonard" just goes to show everyone how cold and uncaring you are you are just as bad as they are..

IF you think for one second that if you set yourself up as some sort of "radio police" will insulate you from the double-standard of our corrupt government, you're dead wrong. It's easy to put a moral spin on anything, but I have to question your motives.

Hollingsworth is a communist. it's that simple. read his record, it speaks for it's self. freedom of speech gives me the right to say that.....or would you condone "big brother" taking that away too? If you're not for the solution, you're part of the problem.

Andy

Well there screw boy, you just blew any credibility(not really, you never had any) on this here ng. by attempting a counterfeit post. You didn't even do a good job of it. You are one jealous individual and the only reason you even ATTEMPTED to screw with a post and put my name to it is simple......You no longer get to the east, son. The "Magician' drags you around that freq. by your hair lip and in your own words, "there ain't a damn thing you can do about it". Tell you what BOY, you keep attempting a poor job at counterfeiting and the Magician will keep putting you back out. One word of advice, your bogus(cause you didn't have the nuts to post it) email address was real easy to track. Better wise up. You have no clue who you are playing with son. You want to come on this ng and act like you do on 555, thats fine with me. Im the only one that pays you any attention here anyway. Everyone already knows you are just a speckled flea and not a problem. See junior, you think 2kw(if thats even what you have) is a BIG radio? Everyone is in hysterics over that one. You are at the bottom of the food chain here son. Get a life. The only folks you are pissing off are the ones you can key on. Unfortunately for you, I'm not one of them and you can't stand it. You want to play counterfeit post games? I love a challenge. Lets see what kind of el-cajones you really have. Let the games commence!! You are still yellow!

The Magician sends his regards!

> reading is wrong.

A typical SWR meter measures forward power and reflected power. When using a
50 ohm coax and a meter intended for a 50 ohm system, these measurements can be
translated into an SWR value. In that sense and under these conditions, an
SWR meter does indeed measure SWR.

There is no requirement for the coax to be some multiple of 0.5 wavelengths
in order to obtain an accurate SWR reading. All the impedances found at
every other length of coax still correlate to the same SWR.

In general, knowing the impedance versus the SWR, adds little or no value.
Tuning an antenna system is usually a trial and error process of minimizing
the reflected power (i.e. SWR). Knowing the actual impedances involved
doesn't provide any benefit in this situation. All you need to know is if
you are getting closer to 50 (what the SWR tells you).

Most watts I ever used was 250(?) O had a Black Cat amp about 15 years ago that I got from my dad. Played around with it a little and sold it. Didn't really care for all the TVI I was giving the neighborhood. Although cable TV pretty much solves that, I think the whole amp thing is a power trip. No pun intended. I don't use any more than 20-25 watts when I use power at all.
As far as outbanding, I'll never stop doing that. Especially on 10 meters. Conduct yourself like an asshole and be treated like one I always say.

Hello Tim: Yes I believe your talking about the Sirios Model Spectrum 1600. It has 8 ground radials, 4 short and 4 long. It is made of cheap Mickey-Mouse type Aluminum tubing. Fit for a mop handle, maybe.

A bunch of the Mojave Desert Rats (the locals) bought them, and then replaced them a few months later, due to damage from the high winds. The cheap Aluminum tubing bends or breaks at the base of the antenna, not to soon to completely bend over. I was in the UK for about a year in the early 90's, and the UK has its own nasty winds, I don't know why anybody would sell such a cheap product in a high wind area like England. I have a Italian made 5/8 wavelength, that was supposed to be a Hy-Gain Penetrator 500 look-a-like, its made from the same cheap aluminum tubing. I might put it up to measure the gain and bandwidth, but not for a permanent installation. However this cheap Spectrum 1600 Aluminum antennas can be reinforced to take a lot more wind. A piece of 6061-T6 Aluminum tubing can be placed inside the lower base element of the vertical section, and anywhere else, to improve the antennas bend strength. Hy-Gain and Jo-Gunn does this to strengthen there antennas at the base, to improve the bend strength. It works. The Penetrator 500, has a 1 1/4 inch by 71 inch Aluminum tubing, that is the base vertical element. It has a piece of 1 1/8 inch Aluminum inside of the 1 1/4 inch Aluminum tubing to reinforce the base piece, because that's where most of the mechanical stress is placed during high winds. I have a lot more info on all this, if ya need it. Any Aluminum tubing antenna that uses what is called liner tapering construction, (meaning Aluminum tubing fitting inside of each other, in a consecutive smaller diameter, to make a element) can be made to stand up to the nastiest winds.

The reason the Sirio was a significant 2 S-units stronger, is that it has a much more effective lower angle of radiation, or take off angle, (as do all 5/8 wavelength antennas), than the A99. If you go outside and look at the horizon and up a degree or two, that's the angle the skip comes in, in a long hall like that. The A99 squirts energy at these low angles, but not as much, but also squirts the energy at much lower angles, that's where the interference to neighbors electronics comes in.

One of the locals here in the Mojave, was a blind guy who wanted to clear up his neighbor interference to the other people in his trailer park of mobile homes. My good friend Steve, installed a MaCo V5/8 ground plane antenna, and Bingo no more interference! The blind gentleman said that he could now hear longer skip stations, but was the same signal strength with the locals as with the A99.

Hope this helps.

Jay in the Mojave, just down the road ah ways from the fillin station.

4319. Lafayette HB-400 info?

Newsgroup: rec.radio.cb
Date: 2000-03-13 00:00:00 UTC
From: pmunsel@aol.com
Message-ID: <20000313151251.13713.00000605@ng-cp1.aol.com>
Source record: 26938

I have a Lafayette HB-400 23 channel tube rig here. I would like to get it up and going for the fun of it. I need the wiring info for a microphone. Also, need info on a plug. It is a 4 pin, has 2 which are vertical, and 2 horizontal. Any other info on it would be nice. I also have a Lafayette Telsat 1023 solid state rig which is up and running. The problem is that the squelch pops when it opens. Any ideas on a mod/repair for that? By the way, I have a 3 month recovery period from an accident at work, so I am spending the time doing some of this.
Thanks and 73,
Paul Munsel
Hearne, Tx.

(2) for sale- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @ http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference for size in the pic. These transformers are very big and have alot of duty cycle. They are removed from 5KW HF Jammers used by the military. They have multiple taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred volts to suit your needs. It also has a center tap. $250 each. They weigh 175lbs each so pick up near Philly is required. I will be at he Trenton/DVRA Hamfest and the Baltimore/Timonium Hamfest so I can meet someone there with them also.
Thanks for looking,
Jim

4324. A99 vs. Imax 2000

Newsgroup: rec.radio.cb
Date: 2000-03-13 00:00:00 UTC
From: SDP <d104@monmouth.com>
Message-ID: <38CD7F02.C47BFE19@monmouth.com>
Source record: 26943

hello newsgroup,
I know tests between these antennas have been done.
I haven't heard much on the A99 with the "fire-up99" that firestick
makes for it. I've heard that the modified A99 with the fire-up99 is
better than the abs 1600 by shakespeare.Firebreather did a test,the A99
with the groundplane kit installed against the Imax2000. The 2000 beat
the A99 on transmit and recieve.I understand that the 2000 is a 5/8ths
wave antenna.The antron is listed as a 1/2 wave over a 1/4 wave. Most
people agree that it is a 1/2 wave. I haven't hacked my A99 apart,but i
tend to go along with the 1/2 wave theory.I purchased the fire-up99 and
installed it.I took some before and after checks.Recieve showed an
increase of 1 s unit and transmit was close to the same.One thing that i
did notice is the backround hiss dropped dramatically.The fire up99 is
supposed to turn the top section into a 5/8ths wave radiator.I now read
that coils aren't very good signal radiators,but Im also told that the
signal never sees or encounters the load in the top of the fire up?Since
I was young, my radio mentor explained to me that bigger is better and
the 5/8ths was the way to go,right?Well enough of the rambling on.My
question is,Is the 2000 worth switching to. I'm not upset with the
performance.I guess i'm always looking for something better.Any
comments,views or knowledge on this will be appreciated.

thanks to all at
the group!!!
p.s. The only stupid question
is the one that didn't get asked!!

A really attractive woman goes up to the cash register in a restaurant.
She gestures alluringly to a man behind the counter, who,
after viewing her assets, comes over immediately. When he arrives,
she seductively signals that he should bring his face closer to hers.
When he does so, she begins to gently caress his cheek, which slowly turns
red.
"Are you the owner?" she asks, now softly stroking his face with both hands.
"Actually, no," he replies. I'm the manager."
"Can you get the owner for me?
I need to speak to him," she says, running her hands up beyond his ears and
through his hair.
"I'm afraid I can't," breathes the manager.
"He is not in today. Is there anything I can do for you?"
Yes, there is. I need you to give him a message,"
she continues huskily,
popping a couple of fingers into his mouth and allowing him to suck them
gently.
"Tell him," she says, "that there is no toiletpaper or hand soap in the
ladies room."

The 148 is so easy to do that the kits are a waste.Any mode will work
with the new freqs but it is illegal to transmit on them anyway,oh ya,I
guess it's illegal to even put them in!

>

What was the total height above ground for the antennas(to the bottom)?
The antennas may be the same and the different heights are fooling you.

4340. Cobra 148GTL Clarifier problem

Newsgroup: rec.radio.cb
Date: 2000-03-13 00:00:00 UTC
From: oneqck76ta@aol.com
Message-ID: <20000313182642.02600.00001803@ng-fs1.aol.com>
Source record: 26959

Hello everyone. I have a non-SoundTracker Cobra 148GTL that I tried to open up the clairifier on and now my sideband sound like crap and can't seem to tune anything in on sideband and on AM I have to have the clarifier knob turned all the way counter clockwise. and when I go all the way clockwise my audio(Recieve audio) Seems to go out but if i turn it just a hair it comes back and It sounds like the recieve is cutting in and out(Crackling soung) when I move the knob. The way I did thhe mod is as follows:

1.Cut one side of R44 and D52. Remove R174 and solder a jumper in it's place. Follow the GREEN wire from the clarifier control to where it connects to the PC board and cut it loose. Solder the green wire to a circut board ground.

2.Follow the ORANGE wire from the clarifier control to where it connects to the PC board and unsolder it. Resolder this ORANGE wire to pin 3 of the MB3756 regulator.

This mod was obtained from:
http://members.xoom.com/148GTL/

Any help would be great. My Grant XL works like a charm! I can slide all over with that but this 148 is not right. Something is wrong. Please help.

Thanks in advance and 73's

I didn't see in your mod instructions any reference to adjusting the frequency of LSB mode , USB, and the AM mode.

Not only do you have to adjust these modes separately but within each mode you have to adjust the TX and RX so that they are on the same frequency.

Spend the couple extra dollars and get the Eimac or Svetlana (doesn't matter .. Although Svetlana claims that theirs last longer) 4CX350, rather than the 250 and get the R designator..

It is a "ruggedized" tube.

My Prides all have the original tubes in them, and they are getting up their in age... However, I also run them with the 4CX350s, and see a bit more suds out.

Sorry, I don't buy it....

If you have to hit a pair of 2879s with 25 watts, then to maintain linearity
, you would have to hit a pair with 50, not 35.

Efficiency doesn't go up with the addition of transistors... It usually goe
s down due to the losses in the splitters / combiners (up to 10 percent per.
..).

So, I suggest that you don't count feedthrough power or dirtiness as output.

It is also a VERY dirty design.

In a "transformered" amplifier, the odd order harmonics are cancelled out (o
r at least, minimized) by the push - pull circuitry. The dirt you are left
with is from the crossover distortion of app 1.2 volts.

With the "tuned circuit" design, you get none of that "free filtering", and
people tend to design them with the least amount of "Q" to see the most watt
s out of the box, as well as get the broadest bandwith.

Just two cents worth from a CB flunky technician.

It has a couple capacitors underneath the PC board adding a little capacitan
ce to the in and output..

This increases the coupling on the output, giving more watts, as well as the
drive available to the transistors.

Real inventive shit.

I consistently kick ass with a Texas Star.

Don't believe me, ask any of the boys in the Great Lakes.

Or KRS

Or Brass

Or any of the others on this group that have heard my small station in the g
reat big old long Suburban.

The amplifier is the smallest link in the food chain.

If your radio puts out shit, you are just amplifying shit.

If your coax is crappy, you are doing nothing but heating it up.

If your antenna sux, you are just spinning your wheels in the mud.

Maybe this will make a newbie stop and think.

I have seen 8 pills run the 8 pill, 12 pill and go 6 rounds in the 16 pill c
lass before.

Hell, I have a 2 pill FET amp that will take out 8 pills!

So, the amp has little to do with it.

The rest of the station is the deciding factor.

And the wattmeter is the most INACCURATE method of looking at your system.

Toll-fucking-Free

Actually, Peek, most of the builders have echoed his sentiments.

I think it is bullshit to put a Rod Of God on a system at a shootout.

Look at the flyer.. What does it say....

MOBILE KEYDOWN CONTEST....

That implies that your station would actually be a mobile.

Hell, BB has to have someone walk in front of him and hold that great big ol
d long Dildo (haha) up...

How the fuck do you think he does that going 75 down the road?

Sky class is anything goes... But, for a regular shootout, it needs to be p
ut in perspective.

This is regarding the new laws being proposed by nine states concerning cellphone usage. Arizona, Colorado, Kentucky, Maryland, Missouri, New Hampshire, New Jersey, New York, Pennsylvania. Some of those states have revisions that could be read to include CB in this ban. Only New York has it written to exclude CB from the law. This is from QST March 2000 pg 15 under DC Currents.

Their is a lot more than Ohms law to electronics.

Also, most of the people who where worth a shit left this newsgroup in the l
ast year.

You used to have a good thing here, with most of the major techs from all ca
mps on here, and a lot of people learned a lot.

About the only "techs" left are me, Concrete Man (when Dan pisses him off en
ough to get him to post, or BoZack stuff his foot up his mouth and Dennis ha
s to come bail him out) and Peekaboo...

The RF DoGooders ran everyone else off.

Sad, but true.

And, I come and go.

Just ain't worth the hassle.

Incidentally, you never emailed me about no AC box. I think everyone on her
e would admit that I try to answer every email sent.. Might take me a day o
r two, but they get answered.

4360. new install

Newsgroup: rec.radio.cb
Date: 2000-03-13 00:00:00 UTC
From: mesief <mesief@nep.net>
Message-ID: <scr9abn9a5n147@corp.supernews.com>
Source record: 26979

I just installed a four foot Francis on my pick up. I would like to know if this will work. I used a mirror bracket and drilled and mounted it to my plastic bed liner in the right rear corner. Then ran a piece of 18ga. solid wire from the base of the bracket to a bolt on the tail gate latch of the box. Also when checking the match with the radio swr cal I get a reading of 2. Is that good or is there a way to tune this antenna. Any help or suggestions would be great. I am new to this fine tuning.

4361. Re: Local enforcement, but different line....

Well, I guess most of ya'll don't see the big picture. If this passes there will be more jobs created and another reason to increase local taxes, more attorneys and their assistants to defend us, etc. But.....then again, if we are not doing anythang wrong, shucks, we ain't got nottin to worry about, ain't that right Bubba? Shi_, heck, I'd pay a few extra dollers to pay the men in demdar blue and white to help get dem dangburn rednecks runnin power, comin across the phone line so I can talk with Billybob in the middle of da afternoon on the other side of town! What the hell's wrong wit dat?

You fellows are killing me. I got my CB license just before they gave up on it back in the 70s . At that time there were 30 million licensed and they figured there were at least twice that many unlicensed . then came the truckers strike and every truck on the road today runs 200 to1000 watts on everything from import CBs to ham radios tricked down into 11meter. Trust me as the fellow says until uncle charlie gets a hell of a lot more help than you or I will ever see there aint going to be anything happening on the highways. Here a while back some people made some calls and wrote some letters to uncle charlie about whole city blocks being knocked out of cordless phone use. they were told to contact the local police because the fcc no longer inforced that type of traffic. If you keep believing what you read in that QST they will keep printing what they think you want to read. KBOM1522..they call me the ZIPPER...I'll see you all in the funny papers!

I agree, I think it like this. If people want to run "gaudy" antenna systems, they need to mention it enough at the breaks to the people running things and maybe they can have a class where you fight with the biggest antenna system you can build, I think this would be interesting, and a hell of a challenge too.

Probably because if you are going to attempt to work on a radio you
should have at least enough knowledge to be able to make sense
of what you are being told to do. If you had that minimal knowledge
then you would automatically know that you would have to re-align the
radio. If you didn't know that then you just exposed yourself as
nothing but a paint by number technician. Sorry, but paint by number
technicians shouldn't be working on radios in the first place.

Hello Tim: No I have seen the 827. But its got to be real close to the Spectrum 1600. The 827 is 266.73 inches long, so its a real 5/8 wavelength antenna, and should work pretty well. I will half to run the antenna on Eznec to see what the differences are with the stock ground radials, as compared to 4 ea 1/4 wavelength ground radials.

I have to make a correction here. The Spectrum 1600 has 20 ground Radials, 10ea 31 1/2 inches long, and 10ea 52 1/2 inches long. How effective all these less that a 1/4 wavelength ground radials are, I don't know! But it sure looks impressive.

Again the bad thing with these type of foreign made antennas, is the cheap aluminum tubing used. The Spectrum 1600, and Junk-Oh 5/8 that I have all use a soft type of aluminum tubing, that is only .050 inches thick. Most all American CB Antennas are made from 6063-T8 (a much stronger aluminum tubing) or better, with a wall thickness of .058 inches. The Locals here in the Mojave Desert, say the Spectrum 1600 antenna bends then breaks at about 1 foot high, from the transparent plastic insulator, that houses the impedance matching coil.

Interesting thought here, (I don't a lot of em) You could reinforce or even replace the cheap shit aluminum tubing with the good stuff, but will cost a arm and a leg.

Jay in the Mojave, just down the road ah ways from the fillin station.

I have a Jag, the supecharged V8 model but there's little room for such hardware.
> Do they
>have suburbans in the UK?
Only a few personal imports.

After nearly a year chasing a copy of the title I've just heard that a 84 diesel Suburban I bought in MO is arriving in Southampton on the 4th April this year.

So I finally get my engine bay with stacks of room plus a truck with a nice big chassis (read that as groundplane).
> I bet gas is out of this world over there.
5 bucks an imperial gallon.

Welcome to the UK.

Hi;
I have a PAL VFO that may work on that
rig. If it has crystals, if I remember correctly they have to be in the 23 Mhz
area, it'll work and give you upper and lowers. It also has a slug so you can
go as far as you want. I'll take $75 for it shipped to you.

Yes it is. A good choice for a first sidebander base station. Easily
modifiable if you choose to do it.

First of all, I take it you have set it back on frequency after the
mod. You might need to put a 47pf ceramic capacitor in series with the
11.3258 crystal. This should clear up your problem. It did on mine.
Then you will have to retune AM/USB/LSB again.

On 13 Mar 2000 23:26:42 GMT, oneqck76ta@aol.com (Hippie Freak) wrote:

new material,please. Icecold left us this last week!
<<<<<<<<<<<<<<<>>>>>>>>>>>>>>>
A really attractive woman goes up to the cash register in a restaurant.
She gestures alluringly to a man behind the counter, who,
after viewing her assets, comes over immediately. When he arrives,
she seductively signals that he should bring his face closer to hers.
When he does so, she begins to gently caress his cheek, which slowly turns
red.
"Are you the owner?" she asks, now softly stroking his face with both hands.
"Actually, no," he replies. I'm the manager."
"Can you get the owner for me?
I need to speak to him," she says, running her hands up beyond his ears and
through his hair.
"I'm afraid I can't," breathes the manager.
"He is not in today. Is there anything I can do for you?"
Yes, there is. I need you to give him a message,"
she continues huskily,
popping a couple of fingers into his mouth and allowing him to suck them
gently.
"Tell him," she says, "that there is no toiletpaper or hand soap in the
ladies room."

From ground to bottom of the Antron was about 52 ft. From ground to bottom of the I-MAX is about 26 ft. Granted the Antron was 18 ft. long, and the I-MAX is 24 ft. So there is a total heighth difference of approx. 20 ft. Anyhoo...my I-Max gets out better than my Antron did!

AMEND brass!
I thought that WJ was on bosses radio today. That deep sound it makes.
Jack in Strong Beach.With the air planes, fire trucks passing in his
back ground but still pure audio damn. Once again I will miss Boss.
Peace,love and happiness to all of bosses family and to all who morn
his passing. He was a super bowl super star. And a friend of many.
Bean

I have one I use when I go camping. I take it apart and put it inside of a piece of PVC pipe mounted on the roof rack. I use a couple of sections of chain link fence top rail for a mast.

----> Equipment For Sale <------

Yaesu FTDx560 HF Tube Transceiver 10-80 meters,
plastic still on faceplate, excellent condition-
with copy of manual $250.00 SOLD

Alinco DR110, 2 meter mobile, 45 Watts Good Condition $110.00

Siltronics Mdl 90 -6 VFO $70.00

Siltronics Mdl 90 -3 VFO $70.00

Turner Plus Three amplified Desk Mic, Grey Model $35.00

Shure 777S Slim Crystal Broadcast Microphone, Original box and accesories, With
Radio Shack Base and Goose Neck $90.00 Obo

Kenwood PB-18 HT Battery 7.2V 1100mAh, Like New in box hardly used $35.00

Kenwood PB-17 HT Battery, 12V 700mAh, Like New in Box hardly used $45.00

Kenwood PB-13 HT Battery, 7.2V 700 mAh, Untested $10.00

Kenwood PB-32 HT Battery, 6V 600mAh, Untested $10.00

Palomar 300 Chrome Dome, base 10 meter tube amplifier, Uses 4 8950's
in good condition, Very clean and works great $230.00

Cobra CAM88 Tube CB Base, 23 Channel Working, No Mic but I have the Mic Plug
with it and copy of the SAMs. $65.00

Realistic Navaho TRC-30 Base, 23 channel, Works good $30.00

RT-524 30-76 Mhz Military FM transceiver, Good condition an 8 on a 1-10 scale,
No nomenclature tag (desirable for collectors) Replaced with Serial Tag.
Manuals and original mic. $500.00 See Fair Radio Catalog for more info. Their
Price $625.00-$675.00

Swan 1200W 10-80 Meter Amplifier, Very Clean Condition, Uses 4 6LQ6 Tubes
With Manual. $250.00 Obo Pic will be on the WebSite Soon! Will trade for a
Kenwood TS520. SOLD

Yaesu XF-32A SSB filter for FT101 series, $40.00

Tram D201 Parts, Wood End Caps, Meters, Crystal/selecter Board, Transformers,
Face Plate, Knobs, crystal filter, Etc... Inquire with your needs,.

Misc. 24V Switching power Supplies, Cosel, Power One Etc... Most new in the box

Crown IC-150 Stereo preamplifier, Metal cabinet
model with copy of manual $150.00 Obo

Midland 79-290, removeable face 10/11 meter AM/SSB/WX
Mobile,dual final design, 5 bands, WX, good condition with
stock mic. $110.00 Reduced! SOLD

Commercial VHF Handhelds:
Motorola Radius P50 (Weak Battery)
reasonable offer SOLD

Kenwood TK240 Commercial VHF Handheld with drop in charger, great battery,
great condition.
Reasonable offer SOLD

Homebrew 3 tube 10 meter amplifier, uses 3 military
versions of the 6146, Seperate open chassis PA and
power supply deck. RF sensing, Plate Load, meter, SSB
and AM. 150-200 watts with low drive $130.00 Reduced to $100.00

Misc. Vacuum tubes (No Sweeps right now) See WebSite

Kenwood TS430, with AM filter and FM board, Manuals, Clean and working Great
$400.00 SOLD

Browning Mark III receiver, excellent condition $140.00

Browning Mark III Transmitters, Make one good one from the two units $110.00

The above Brownings can be seen on the website

Icom IC-230 with manual, mic and mobile bracket. not working correctly, VCO
unlocks but in great cosmetic condition,, $30.00 Shipped

Cobra 148GTL ST. Clean Condition with Stock Mic $110.00

Cobra 148F GTL Clean with Dial a Watt and Freqs, Stock Mic $140.00

Browning Mark III Receiver, Browning Mark III AM Transmitter, Very Clean! and
D104 Mic $250.00 Pic will be on the Website Soon !

Tram D201s, Both have unlocked VFO's, One has lower freqs
with good AM and weak SSB the other has upper freqs with good
AM and SSB. Both in good condition $250.00 Each

Penetrator HB-150 10/15/20/40 meter Mobile amplifier, 150 watts class AB1
Low drive input required, super clean! $150.00

Yamaha FG-460S-12S, 12 String Guitar, Beautiful guitar, near flawless, Gold
hardware, Pearl inlay, Seymore Duncan Acoustic Pick-up, Hard Case $350.00

Hooker 10 meter Amplifier, 1 pill design, PEP and RMS mode, CW/AM/SSB,
Preamplifer, Clean, still has factory seals $75.00

Pacifc Scientific / Superior Electric 2 Axis Servo System $250.00

Tram Diamond 60 AM/SSB Mobile, SIltronics Model 90 VFO -3 and Paradynamics Meter, All in good working condition $175.00

VHF Trielectric Amplifier 13.8 VDC As Is $40.00

Motorola UHF 13.8 VDC 450-470 Mhz Solid State Amplifier, clean!, Surplus, As Is $40.00

Alan K1313 10 meter Single Tube Modulator, 110 VAC, With Spare 6KG6 tube, New Russian tube installed, Spare is 90% or better, Clean and works Great! $150.00

Johnson Messenger 250 Base, With Original Box and Manual $75.00

Astatic 10DA Mic Head, Works and looks good, Missing the locking Ring but plugs right into a D104 Stand $30.00

Fentone 500C Studio dual crystal Mic Head On a TUG8 D104 Stand, Wired to a Demco Tube Modulator. Smooth Clear Audio! $200.00 Obo

Pentax K1000 35mm Camera, Wide and normal lens, 2x teleconverter. Cokin filter holder with flare guard. Several special effect Cokin Filters, polorizers and acessories, carrying case etc... $250.00 Obo

SBE Trinidad , 23 channel base CB, near perfect condition, original manual $70.00

Fluke 8050A Digital Desktop Multimeter, AC/Batt, needs new batt. but works great on AC $50.00

NF Circuit Design Block Model CR-116 Low Distortion Signal Generator, $125.00 Obo

Misc, Yaesu FT101 Components and parts, Misc untested boards, Email If you need something.

Electrovoice Mic.... See Website!

Misc 19" Racks..... Email for Details

Any of these can be used......6LF6 6LB6 6KD6 6LR6. 6LB6
tubes are the cheapest and produce a little more output than the
original 6LF6 tubes. Or you can mix any of these with decent
results as well but I personally don't like to mix different
types. If you have to..... use one type in the driver section
(the 2 off by themselves) and another type in the final section
(the other group of 4) .

I know a radio needs realignment after a clarifier mod.
It would be nice if the folks that post info would post the
caveat emptor for the work. I've been in this too long not
to know these things. Newbies on the other hand learn the
hard way. All of them do not ask the right questions.

tnom@mucks.net wrote:

4403. DTI Project?

Newsgroup: rec.radio.cb
Date: 2000-03-14 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8aklm6$tn0$1@nntp9.atl.mindspring.net>
Source record: 27022

Does anyone have any info on the DTI CB radio PLL control program and interface that was offered from the following website?

www.indirect.com/www/sxi/dti4home.html . It hasn't been updated for a while, and all the email addresses listed on the page and it's links for the project have bounced my requests for info. I would like to take a shot at interfacing a PLL to the computer, and this project seemed to already be where I want to go.

Thanks,

David

http://rob.acol.com/~cb/chchart.html

Look between 3/4 7/8 11/12 15/16 19/20. They are 50 KHz apart.
Set your split to 00500 on your 2950. Go to 3A and split +.
Have your friend go to 7A and split -. You can't tell you're
on different frequencies! Have fun and don't get caught.

: should show that kind of difference.I would look for something wrong
: with the test procedure.

With current S meters, it is closer to 6 dB. But I still agree, there
cannot be that much difference between the two. That would be the same
difference as between a dipole and a 3 element beam. Just ain't gonna
happen when comparing a 1/4 wave vertical to a 5/8 wave vertical

Yep. He believes in "firing a warning shot across the bow". Some people
clean
up their act when they hear from him. Others decide to see how far they can
push it. That's their right, I suppose. If you can't take the heat, stay
out
of the kitchen.

Somehow this sounds incredibly inefficient. If he has to call everyone that
is in violation there's no wonder thing are the way they are.

I'll bet he does. If he's late, it's referred to the US Attorney's Office.
If
he ignores them, it's jail time (plus he STILL owes the fine). Maybe he
will
luck out like the lady CBer who pleaded with the judge that she didn't have
$5,000 for her fine. She agreed to sell all her radios and likewise agreed
to
never purchase any more transmitting equipment, for life.

Well, we all know the fine can be reduced if not waived. And as far as the
"Lady CBer" It looks like she got away with not paying the fine but do you
really think a CBer will just go 10-7? Just go? I bet you really believe
that.

I would agree that 2 REAL "S" units is a bit much. But remember this is
CB. CB meters are notorious for being inaccurate, and/or non-linear,
especially at the low and high end. I've already taken a bench rig, on a
signal generator, set for an S1 reading, increased the signal level by
10 db and the meter jumped to S7. It's quite possible that given those
conditions, the difference between antennas could be 2 "CB S units". The
real increase may be more on the order of 2 or 3 db.

>

Reminds me of an antenna made by a local on the east coast back in the early 70's called a "Super Starburst". 5/8 wave long, with 10 radials that were maybe on the 50 in range. Back then, that antenna would blow away just about anything else on the market (at least according to anyone lucky enough to own one). I never saw any REAL gain figures but one local actually put out a better signal with his starburst, than with his 3 element beam (to be fair, the beam was a bit lower in elevation, but not much).

In any case, the guy who was making these antennas either died, or something, and stopped making them. Shame. They would sure be a great performer today, compared to those fiberglass junk sticks that seem to predominate the rooftops.....

> frequencies of the added channels? Thanks.

The "A" channels originally refered to the frequencies that are skipped
over every 3rd channel in the original 23 channel bandplan. Those
frequencies were reserved for class "C" radio control.

The significance of the 10 KC switch is that it not only fills in those
"RC" channels, but also the freeband channels that you would also skip
over while using the same channel selector. In essense it gives you 5
extra channels per band.

Hello Tim: Yeah you got that right! Replaced the light weight impedance matching hoop or ring, from hollow real light weight aluminum tubing to solid 3/8 inch rod. Got quit a few locals here who wanted a more bullet proof hoop. The birds come and land on the hoop and bend it out of shape.

As I was setting the MaCo V5/8 antennas length, for 240 inches for 27 MHz, I noticed the assembly sheet said to measure from the bottom of the antenna, not where the vertical element comes out of the base insulated assembly????? Yep thats what they mean!

Will this makes the MaCo V 5/8 a lot closer to a 1/2 wavelength than a 5/8 wavelength antenna. The tuning adjustment on the hoop should be set as the assembly sheet says, but then you need to adjust the antennas length for min SWR, and then go back and fine tune the hoop adjustment. I wore out my ladder tuning that thing. I'll have pictures and more info on the MaCo V5/8 in a few weeks. Got a old A99, might try the matching circuit to match up the MaCo V5/8?

1 more day i predict that the telephone interference and TVI calls
will tripple in the next 30 days at the fcc office all these new
generals with dipoles and 1500 watts Bleedover will reach a new
high Wait till all these Tempo ones with no ground get out there
with 133 foot dipoles stretched out almost to there next door
neighbors tv antenna then they fir down that kenwood 922a or
there dentron 2500 . or that amertron with the 811 sweep tubes
the worst part is theyll will be legal all the parish meetings
will be adopting new rules on how to handel the new interference .
they already get with the power company and pull your power meter if
you cause tvi in my town ....if anyone plans on getting a hf
rig buy it now the price of used equipment will go up . they will be
trading in there 25s and 29s for yaseu 757 and kenwood 140s

Well Steve it is obvious that you have never had the luxury of buying something at a good price! Your post was totally uncalled for. Once again I repeat myself. I gave you my fucking address, number, name and invited you to bring your fat ass down to purchase it and field test it. But you wanted me to sit on the amp until "your alternator guys brought you your alternator". Quote on quote! I explained to you in perfect 100% english that I needed to sell the amplifier. I guess you didn't listen or maybe not serious about the whole deal all together. Now would I be selling a amplifier that is no good and tell you to come down to see it and test it? No! Cause have you had brought yourself down and hooked her up and she didn't work I would look like an asshole whom was trying to scam you! Now why would I go through such lengths including giving you my address(to a person whom which i have never met nor know) if the amp was no good? It's obvious that you are nothing but a child whom did not have all the money and wanted me to wait til you had it. I even offered you the extra pills which are in perfect condition and as well as 15ft of 1 odd welding power cable (which is not cheap) and $95 worth of welding cable quick disconnects which are brand spanking new. Now for the price I was asking I think it was a hell of a deal. You sir are nothing but an IDIOT.! Now stop posting up this nonsense on the group and get on with your life. And remember, if you want to get out you have to reach deep in the pocket to buy a large amp. These do not come cheap. So ask Santa to bring you one cause you cannot afford it! Have a nice day! Roly

Well Roly, I won't use the foul language you use or call you BABY names.
They can see who the child is! I wouldn't have contacted you and got all the
info on your amp and directions to your house if I weren't going to buy it.
Especially saying to you on Fri that "I'll take it" and told you I'd call when
I got the alt on Tue. That Sat. I puchased a Wilso 5000 for the job.
As for your interest in my "ass" I'm not interested in you in that way or
your amp!
As for someone being an idiot, when someones say I'll take it I think you
should be able to figure it out, duh! Also as for selling an amp that you says
works you sure put it back up for sale when I said I'd come get it and check
it! I live 300mi from you and would've come get it and take it after it was
tested. I don't send $350 to someone without checking to see if the product
works!
As for being a " asshole", someone who had there item sold and now is unsold
because he couldn't wait a few days put you in that category as a strong 2nd or
3rd to #1.
Again you call me an "idiot" for not seeing a good deal. Well I did say
I'LL BUY IT" so it would've been a good deal but you never gave me a chance to
find out if it really worked did you!
As for getting the money there was no problem and you sir will not get it.
As for stop posting here I will as soon as you stop posting deflamatory tirads
directed at me.
I hope YOU will stop doing so and YOU sir should get on with your own life
and sell your equipment! I suggest you post your equipment for sale again and
stop posting you're crap about me. I won't post anything on to your new post
because our dealings are concluded as far as I'm concerned! If you continue
posting to me, I will continue to post back. I HOPE you understand!
Tired of you
BYE!

Can't get any more accurate than that. I read these dumb ass posts in this group about this guy getting caught and that guy getting caught. Maybe they are isolated incidents, but I don't think the FCC gives a damn about CB unless someone is making a lot of noise. There just isn't the manpower. And I'm s'posed to STOP freebanding?? I never called it "freebanding" anyway. That's probably some word a couple of "hero" ham operators or "good buddy" cb'ers came up with. You know the type, the kind that still say "Roger dee ten four" or "Roge O" Hahaha! These guys crack me up. The seventies ended how long ago?? Heheh!

Read shit rejection! I like the radio anyway, but the rejection is lousy. But then you just back down on the RF gain and it goes away, unless you wanna talk skip. Then you have to put up with it.

Base or Mobile?
Legal?
A Cobra 148GTL for Mobile use
or
Uniden Washington for Base

The 148GTL's are not really made anymore but can be found new in some places. Now they make the crappy 148GTL-ST. Usually you can get one for under $300 anywhere sometimes less than $200. Shop around. Same goes for the Washington. Or search for a Cobra 2000GTL Base.

But why these? There legal in the states to use. You can find other neat stuff like a Galaxy Saturn for under $500 new or a Galaxy 88HL for under $400 new. All these have the extra features like channels, echo, roger beep and so on.....

All 11 meter radios do start out legal. By saying "legal ssb cb" I was hoping to avoid anyone suggesting a superstar 3900g, galaxy 99, etc... which are illegal to modify for use on 11 meter.

I have heard good things about the cobra 148 gtl (which busdriver suggested), midland 79-290, uniden grant, and galaxy dx 959.

I don't need a bunch of bells and whistles (even though I don't mind them). I just want the cb that will produce the best transmisions and receiving.

Try Grant XL, pretty much a 148 in pre-soundtracker form, Washingtons are good rigs, Should be able to find EITHER under 200 bucks.

Look into some of the exports, eventually you will want to go out of band, it'sjust a fact of life, and the enforcement of Part 95 is less than severe, primarily geared towards those interfering with legit communications, and big power stations that have dirty emissions and spurs all over the spectrum. The old "gentlemans' agreement" about AM and SSB channels (16-7 and 36-40 were at one time pretty much SSB slots) has pretty much dissolved on the 40ch band, you will find some pretty nice people to talk to above and below on SSB.

Keep a clean signal, don't be an asshole,and for the most part you will get a lot of enjoyment out of radio as a hobby.

DX99s are around for the mid-300 dollar range, nice rig with a lot of useless toys but pretty reliable, 2950RCI's under 300, lots of others well within what you want to spend.

Hell, for 500 you can get into a pretty decent general coverage HF ham rig on the used market that will do and go everywhere and will be there if you decide to go into amatuer radio, not to mention doubling as a great shortwave receiver.

Just my 2 bits worth

4461. mobile antenna design performance

Newsgroup: rec.radio.cb
Date: 2000-03-14 00:00:00 UTC
From: DBB <dbb0003@attglobal.net>
Message-ID: <lb3tcsgm2gn6a888r9bqh2acfkjc6dqu5c@4ax.com>
Source record: 27080

In researching this subject I've read that all other things being equal, a top-loaded mobile antenna will out-perform a center-loaded mobile antenna. What I haven't been able to find out though, is how significant the improvement will be. I imagine it would be significant if the mount point is below the roofline, as the top-loaded design gets the coil above the roof. However, if the mount point is on the roof, does a top-loaded design materially improve reception and/or transmission? Will a top-loaded 4-foot antenna perform as well as a center-loaded 6-foot antenna mounted on the roof?

4462. Speech Processor Model # RFL1 , RFL Labs

Newsgroup: rec.radio.cb

Finally they are available. Using the Texas unit of measure ....
" Sh__t Loads! " of Commercial grade Processing available to you the
CB Radio using public. Check out my Web Page "rfllabsinc.com" for all
the vital statistics. Some people have suggested that I offer the
RFL1 Speech Processor circuit board for sale by itself. Right now you
can only get the RFL1 as a complete assembly. I'll think about it. The
current version RFL1 as a complete assembly is a more bullet proof
product for any technical skill level. Keep your eyes peeled on
E-Bay for a comemorative RFL Labs issued D-104/RFL1 processor combo
complete with engraved name plate. Could become wildly collectable.

Source record: 27082

<< Well, I guess most of ya'll don't see the big picture. If this passes there will be more jobs created and ....>>

Etc. etc. etc. blah blah blah. There is no "big picture". There is no conspiracy to take away your rights. There is no conspiracy to create more law enforcement jobs. There is no fascist stormtrooper hoarde waiting to kick in your doors and steal your CB's.

These are fables created by the ignorant for the consumption of the foolish.

The plain and simple truth is that the more export radios and linears sold and put on the air, the more interference created, and the more complaints generated by citizens being interfered with, and by amateurs who's 10M territory is being poached on.

Since the FCC is unable to locally enforce CB (it would take a staff of thousands) the logical choice is (like it or not) the local law enforcement organizations.

Now Bubba and JimBob feel that they can run their souped-up, mod-clipped "radidios" and "mauls" on "them funny channels" any time they want because it's their "God-Given Right, yesirree". Fine and dandy. Because the more Bubba and JimBobs who do this, the more interference complaints are likely to be filed BY REAL CITIZENS WHO ARE NOT AFRAID TO GIVE REAL NAMES AND REAL ADDRESSES TO THE GOVERNMENT.

Who's the "gubbamint" going to listen to? Taxpayers and Constituents (who are being interfered with)....or anonymous yahoos who hide behind names like "Shadow" and "Pinhead" and "Jay In The Mojave"?

Three guesses and the first two don't count.

You all collectively created your own mess --- by refusing to accept any responsibility whatsoever. And by allowing the 11 meter band to deteriorate into a cesspool where out-of-band and high power operation is encouraged.

Please don't whine when your irresponsible antics attract attention. Please don't act so surprised that people want an end to interference. Please don't try and pin the blame on fascism or predjudice or "communism".

If you want to freeband on illegal frequencies belonging to other services and run illegal high power -- and you don't want to be bothered by the government.....and you don't want to take any responsibility for interference you create -- then get the laws changed.

The New Texas Rangers (TR-296)are pretty nice $130 from Copper. It has the same main board as Cobra 148GTL(non sountracker) that Ranger made for cobra from 1992-1997. The Galaxy DX-949/959 and the newest Ranger CB's(legaL)696/696F(Freq meter)/699wx all share the same main board. These are almost identical in performance to Grant/148 but with greatly enhanced expandibility if wanted. I personally now use a Galaxy 949 and love it. Personally, I d recommend a TR-696 and use the money you save over a 148 GTL and get a really good antenna which will make more difference anyway.
R.T.
P.S. Ranger and Galaxy both have a two year warranty on their radios.

Hi Jay,

And, are they any good?

Hey, just wondering, what is your take on the Maco 5/8?
I ordered one for $56+ and was curious as to your
opinion. I originally bought an M400, but due to restrictions
by the landlord, I find I must go with an antenna that has
flat, or 90 degree radials.

Regards,
Clyde Parsons

>that.
>

Yes sir, I DO belive that. It is a plea bargin which has happened in other cases, also. It's like being on probation. Screw up and you owe the fine.

An exception was made for one fellow whose job involved using a two-way radio. He was allowed to talk on that radio, but not on others.

Situations like this are similar to the restriction placed on convicted felons about not owing or possessing firearms. Ever. End of story.

Everyone who has been through this kind of legal proceeding says they've had enough. Never want to go through that again! If you sit down and count the financial and emotional toll, you probably can see why that would be so.

It's been said before: This is only a hobby.

>point is on the roof, does a top-loaded design materially improve
>reception and/or transmission? Will a top-loaded 4-foot antenna
>perform as well as a center-loaded 6-foot antenna mounted on the roof?

All things being equal:

1.Top loaded antennas perform marginally better than base loaded

2.Taller antennas (less loading coil) perform better than shorter

3. Thicker antennas perform marginally better than thinner.

4. More conductive antenna stock makes a marginal difference
over less conductive antenna stock.

5. A higher antenna mount works better than a lower mount.

6. A free and clear antenna mount works better than an obstructed one.

7. A more substantial RF ground works better than a minimal ground.

8. A vertical antenna performs better than a diagonal (windblown).

Number 5, 6, & 8 are the most important factors in the performance of
an antenna.

Now if any one could come up with a formula that includes all of
these factors then we would be able to answer your question. There
is no formula. However we can say this.
The best mobile antenna is a thick stiff nine foot whip that is
silver coated and mounted on top of the roof with multiple radial
grounding points.
No one is going to use the antenna above in the real word, so one
might draw the conclusion that in the real world we might substitute a
102" stainless whip for the best real world performance. WRONG.
The 102" is made of stainless. Stainless has only 3% the
conductivity of copper. This alone will stop the 102" stainless from
being the top performer. Subtract also the fact that the 102"
stainless bends over in the wind and is also a relatively thin
antenna.

So what is the best choice? It appears that for a realistic antenna, it is a mildly loaded top or center loaded antenna made of thick conductive materials. There are a few of these ugly looking antennas around. They do work marginally better than the 102" stainless and have the benefit of being shorter. These antennas can get as short as five foot and still equal or outperform the 102" stainless.

Percent conductivity of materials, based on copper being the standard of 100%

Aluminum 65%
Brass 28%
Chrome 74%
Gold 71%
Iron 17%
Silver 106%
Steel 10%
Stainless 3%

4490. Tribute to Captain Boss...

Newsgroup: rec.radio.cb
Date: 2000-03-14 00:00:00 UTC
From: Toll Free <tollfree@bigradios.com>
Message-ID: <phAz4.5679$QF6.250323@news5.giganews.com>
Source record: 27109

This story was told to Dr. Crow and I by Captain Boss at the Hot Springs br
eak this Fourth of July weekend. (This is a little old... From Hot Springs
2 years ago, but I thought it was fitting for now... Since his passing.) W
e where sitting there talking, and all of a sudden, Captain Boss runs up and
starts telling us this fantastic story! I thought that someone else may get
a laugh out of it, too!

Dr. Crow Antennas

As told by Captain Boss, Long Beach, Ca.

I was driving around, using my two-watt antenna and got a Dr. Crow Double C
oil. I put the Dr. Crow on my mobile was happy. It was kicking ass! Bett
er than the two watt, as it was smaller, but it performed!

One day I forgot to put the Crow on (I always take the antennas of my mobile
, so they don't get stolen) and went to work. On the way home, I filled up
the Suburban with gas, and was I surprised! I had 20 miles to the gallon.

The next day, I put the Crow back on, and on the way home, filled up the gas
again... Bummer... Down to 16 miles to the gallon. Next day, same thing.

On the fourth day, I put the Two Watt back on, and on the way home, I got ga
s. 19.5 miles to the gallon..... Is this wierd or what!

So when I got home, I took that Dr. Crow and sat down and looked at it...
Real close. I started to shake it, and when I did, it rattled: Kind of lik
e an Antron when you shake the bottom piece.

Well, I took that Crow, and banged the bottom of it against the cement. The
n, I took it and turned it upside down and shook it. THERE WAS MY PROBLEM!!
! All the time I shook it, the ass was fallin' out!!! That Dr. Crow was f
ull of all that ass that it had been kickin on my mobile! Once I cleaned al
l the ass out of those two coils, I put it back on the mobile.

Then, I took that Crow and put it back on the mobile and drove around. I dr
ove all around Great Shakey and when the tank was about empty, I filled it u
p. I was right back at 19.5 miles to the gallon.

The moral of this story is that all you people out there running Dr. Crows
will have to clean all that ass out of them. They will hold about a ton of
ass, then they have to be cleaned. Dr. Crow antennas Kick Ass!!

This story was told to Dr. Crow and I by Captain Boss at the Hot Springs br
eak this Fourth of July weekend. We where sitting there talking, and all of
a sudden, Captain Boss runs up and starts telling us this fantastic story!
I thought that someone else may get a laugh out of it, too!

The other thing that should be mentioned is that the short tubes are what is needed so you don't have to modify the amp, and they are no longer available from anyone.

But, the 300A is about the cleanest and best sweep tube amp ever made.

Toll,
I remember listening to Capt.Boss on day last year on the
bowl and he was laying the smack down that the brothers in
Hot Springs didnt know how to dress.
He ranted that every year he went that the same old niggers
(No Offense Gang) were wearing those same old Double Knit
Outfits.He commented further that if he got there and they
were indeed wearing those same ole Double Knit Pants that
he was gonna bust a cap in there ass so he wouldnt have look at
the same thing that he has seen from year to year. Any way
Capt.Boss was surely a Super Star, Really a class act I worked
him MANY times from S.C. even though I have moved from CB
Radio to Ham Radio I still keep up with the "Good Time Gang"
I am too saddened that my long time CB friend has went SK.
May God keep his family safe,humble and ever in his presence
in this time of sorrow. 73 N4JZH Donnie AKA(Mr.539)

I've run one for several years.

I drive a truck and slipseat (change trucks) constantly. This one has been banged around a bunch and yet never a service problem. You can hear me all over the Chicago area just fine.

If you're looking to hit the other coast, its not really the one to buy. But if you want a good bang for the buck amp, this is it.

QRM comments:

John's web site is THE authorative source for product comparisons! Also, folks in alt.radio.family are not shy about expressing their opinions about various brands. Moreover, we stalk the best deals on radios and batteries and share what we learn.

As strange as it may seem, there is almost no difference in performance between 100MW, 300MW and 500MW units. So pick your radios according to the "bells and whistles" you want. Tone Coded Squelch is a "must have". Scanning is nice. The rest of it boils down to battery life (soft on-switch vs hard on-switch), transponders, accessories for your ski/bike/canoe trip, etc.

Bring your questions to the NG. You'll find dozens of helpful folks who will give you a hand.....

I find for a roof mount applacation the wilson 1000 permanent mount is the best antenna money can buy ......considering how a 102 would look on the roof of a truck or car ....for a base load antenna its preformance is outstanding ....does anyone else think the 5000 is silly and less preforming then the 1000 i do . Harder to set swr's , and the trucker version is to heavy and i wouldint run 5000 watts through a coil that close together ....BusDriver

Thanks for the info. I won't be doing the mods, I have no business inside a radio or amp. The more I know about a product, the better I feel when I communicate to the tech at the shop. I know of a used one for sale for 300 bucks, I want to know what to ask when I check it out at the shop.

thanks
dave

No, it is not worth switching. Get the ground plane kit for the
Antron if you don't have it already. It too will result in a noticeable
improvement. The FS-99 do work well. I have sold many, and have gotten
may positive comments about them back. The only problem is that by the
time you pay for all three you've paid more than you would have for a
MaCo 5/8 which is just as good of performer as a tricked out Antron.

You are correct, there is no current at the far end of most antennas.
No current, no radiation. The addition of the coil at the end will move
the current up the mast from the base. Which is what is responsible for
the performance improvement. But, it never reaches the coil.

Tim

: antennas.......BusDriver

Yes, silver is slightly more conductive than copper. But not enough to make a meaningful difference in antenna systems.

As an example of how little it means, even at DC - your battery clamps in your vehicle have only 8% of the conductivity of copper. Does not seem to bother getting a lot of current to the starter - does it?

The Radio Amateur's Handbook has a table of relative resistivities of metals. You can find even more complete tables in a CRC Handbook of Chemistry and Physics.

>seem to bother getting a lot of current to the starter - does it?

It makes no difference in this case because the clamps only
extend about a half inch before the copper wire takes over as the
conductor.
The different conductivities of metals although small in their
effect on an antenna can be measured none the less.

A stainless whip is 102 inches and its conductivity is 3% then , If my whip was made of pure GOLD (71%) How long would it be? ill give you the Freq 27.500 Mhz Normal atmospheric pressure . If the antenna would be considerably shorter could you achieve a 1/2 or 5/8 wave length and if so what would be the gain over a 1/4 wave ? And at current Gold price How much would it cost? Hehehehehe I know you guys can do this. Ill bet its easy for yall

I do not recall ever asking for an assholes opinion! Maybe you should
try masturbating for a while and relax there buddy. Go back to the
bathroom and take care of business. I'll continue to post up WHATEVER
and WHENEVER I feel fit. Have a great day!

As for you Jffherring or Jerry Springer whatever your fucking name is
go fuck yourself with the largest dildo on the market. Maybe I can
refer you to Mr. Shark. I hear he has the largest selection of pre-
owned dildo's around. Why don't you get that same transformer that you
want me to play with and shove it up your dead grandmothers ass!

Tghis post is exclusively for my dear friends Jeffherrings and The Landshark. The worlds two toughest guys whom which hide behind their keyboards and say big things that come from such small men! The amplifier has been sold. Thanks for your response once again and keep them coming. It's quite obvious that you two need to purchase yourselves some lives. K-mart has a sale on them on isle six. If I wanted to hear from an asshole (such as yourselves) I would fart. Keep your comments to yourselves ladies! They are not appreciated on this group. I hear that the woman have a great news group on Deja. Maybe you two should subscribe to it. Have a great day and remember to use KY jelly on the landshark cause he has a swollen ass.

Source record: 27170

PS I am sorry for taking out my anger on you.
I sent you an email explaining how this unit works here is a copy of it:

It will be a new unit. It's number of digits depends on the size slug you
are
using.
You have to program the unit with what size slug you use for forward power
and what size you will use for reflected power.
Example:
500 watts into a 10KW slug will read .5 with the kW light on.
9,999 watts into the same 10kw slug will read 9.999 with the Kw light on.

Example 2:
80 watts into a 100 watt slug will read 80 with the watt light on.

This piece of equipment is very fast and accurate. So when you are talking
you will see the meter displaying different numbers that is because you are
using amplitude modulation. If you say ahhhhhhhh it will show a constant
wattage hope all
this help see ya

Yesterday I posted a long reply to your childish post preceding this one.
It was a good one too. I'm not going to do it over again because frankly
you're NOT worth it.
You seem to have a fetish with my ass!
Please understand I do not feel the same as you do, so think of someone else's
ass.
I see you sold your amp and that's good for you.
You're the one who posted all the foul language here on this group, not I.
Your the one that owes ALL these people an apology for your stupid tiraids and
cursing! I'm sure the parents of some kids who read this group really
appreiciate your intelligent descriptions of my anatomy!
So, who is the child here? I only posted back to your idiotic rantings. I
will not read your e-mail or postings to me concerning this matter any more!

I couldn't care less
Steve

4555. Listing an auction item on the newsgroup

Newsgroup: rec.radio.cb
Date: 2000-03-15 00:00:00 UTC
From: wrd520@aol.com
Message-ID: <20000315080907.03550.00002041@ng-cm1.aol.com>
Source record: 27174

PLEASE, when you post a link for an item you are selling at auction on eBay or Yahoo, or wherever, don't put "FS" in the subject, use the term "FA" (for auction), which is the generally accepted form for this type of listing.

There are many who don't use the auctions, and it is really frustrating to open what you think is an item that you might want to buy only to find an auction link. For those that like the auctions, the link can be followed on interesting items.

Not a flame, just a bit of NG ettiquette that helps avoid wasted time and effort.
WRD

I can remember my old Lafayette in the 60's had 22A, and also 22B,,which were a lot of fun for us LaffinYet users as a "secret channel".he guys with the old tunable receive rigs could listen but not talk to us.
At least it was fun right up until we got warning letters from the Canandaigua Field office monitoring station telling our Dad's, who were the station license holders, that we were being bad kids!

Back then Uncle Charley was a real and present authority. Thank heavens for overcrowded bands and budget cuts!

Many ham rigs also suffer from "S" meter non-linearities. I am not doubting what you saw in the least. All I am saying is that while it looked like a sizable jump on your meter, in reality it was probably not THAT big of a difference. But hey, any improvement is a good improvement. Good luck with your setup.

No problem, of course you need a radio capable of reaching the illegal (in the U.S.) frequency located fifteen "channels" above Ch 40. The BetaBossaNova group is worldwide, as is single sideband right now on 11 meters. Get on frequency, talk to Bob, and he will set you straight as to how to become a member of the elite BetaBossaNova sideband society. 27.555 USB is the official call frequency of the group and we own the airwaves worldwide!
Please ignore the rude idiot who is posting counterfeit messages to this group under my name.

Just curious Do any you ever listen to those clowns on 4898 Mhz , i have been listenings to them for 7 years one guy i think is the air to the johnson and johnson empire another is a pawn shop owner , these guys change HF rigs like every month . There are about 8 of them that are regs ,,there in 8 different states they all come in s9 to s60 3 of them have separate 200 amp mains just for there HF amp , they curse ,swear ,lie ,cheat and dare the FCC to do something about it , they have there own fan club booth at the dayton ham fest where they sign autographs. these guys are funny funny funny i have spent many nights laughing my ass off at these guys , warning they are very rude to newbies . every night a guy tries to say hello and they bash on him .thell make fun of your race greed sex and anything else they can , that's just what they do ...they always seem to be fighting some citation in court ,for extreme power or language . any way just curious if any one else has ever heard them. oh yea boy there are some good fights too with the other hams on 4895 bleed over you know! later BusDriver

Source record: 27188

In my previous post- GM-Mark of Criminals, I brought forth the NEWS that GM is attempting to put out of business family owned shops that repair their CAR STEREOS, in favor of a COMMUNIST SYSTEM of just having 2-3 places nationally that fix these radios, instead of 1 or 2 places in every BIG city that fixes them. I talked to someone close to the situation as to why this 50 year business went out, and he said that it was NOT ONLY GM that caused them to go out of business, but FORD & Chrysler too !

The SINS of all these companies will catch up with them SOON !!!! They are UN-American! What is GOOD for GM is BAD for the LITTLE MAN !!!!!
Dave!!!!!!

Is this channel 48 or 98? What does this have to do with CB? I guess it is
a CB intrusion into the Hambo freqs.!!!! Dave!!!!

Understandable Kal! The posts by the one who goes by eatin'--ass-a-nova is a troll. His posts are meaningless, including the counterfeit posts he places here under my nic. He is a jammer on 27.555 usb from Phoenix, who calls himself Bob(not his real name, as cowards always have aliases and fake email addys) 27.555 is an international call frequency where you can make a contact and move to another channel and have your conversation. For many years this has been a great contact channel(albeit illegal in the U.S.) but from what I've heard lately, the freq. has become a cesspoole. This flea speck has chosen this forum for another vehicle to vent his lack of vernacular and inadequecies, just as on the radio. He chose me to attack(huge grin) because he thought he was some kind of self appointed huge operator until I started dropping the maul on him and it's driving him to the point where he has his little red panties in a wad. He can no longer agitate like he would like to, so he took to this forum. Lower and upper 36, 37, 38 , 39 and 40 offer great dx. You should have no problem making contacts from there in Alabama. 3s and happy dxing.

Sincerely Yours,

Master of Bob!

Ok! It is obvious the lil girl is having loads of fun attempting to counterfeit my nic to posts. The folks on this ng know I don't resort to cursing. That is the first tip off. Secondly, ole' red panties Bob hasn't figured out how to remove the " <" and ">" symbols from my addy. That indicates a bogus post, as well as another error, as those who are familiar with my post can tell. He's EXTREMELY upset with me 'cause everyone in the east tells him he's backout with a little help from a magician. I truly feel I don't deserve all the attention and energy he devotes to me, but it's a great feeling knowing you're getting WAY up, isn't it?

I guess I should feel privileged to be insulted by you????????
Not in anyway do I though. I couldn't give a flying fuck what
you think of me. I've been on this newsgroup longer than
you've been out of diapers, so don't try to preach "They
are not appreciated on this newsgroup" crap to me little man.
I had no desire for your piece of shit amp, and it looks
as though some poor slob bought it just to get you to stop
posting that boat anchor up for sale every God Damm Day
(IMHO) I owned one about 4 to 5 years ago and It had
to be without a doubt, one of the most unstable, low
powered, hunk of junk amps I ever owned. I sold it
within 2 weeks of buying it for about $300.00 (WAS GLAD
TO GET THAT AMOUNT)
So in a parting shot, go ahead and say what you
want, people out here only know you for trying to
sell a Leece Neville Alt & !@ pack amp and acting
like an idiot by posting it 9 times from 3/2 to 3/11 and
whining like a baby when somebody just post a
be careful about you warning. They sure as shit don't
know you by talking to them on the air on a regular
basis, or your technical expertise.

123 is it true that the teammate drifter has an actual x force box that was just painted black and labled as a mowatt box??? come on 123 get real.

i know you can figure out the problem with the stability of your new mowatt design...no need to just paint and paste.

get back to work and stop playin on the computer.

bye bye bye bye bye

Iam afraid this is there number 1 downfall They don't have proper business structure. It is very hard to talk to dave , If they were organized there company if they had a real company would be on the stock market.....They have a great sout after product But as always they cant handle the demand. untill he sets up a distribution system nothing will change . If every one is allowed to deal direct with dave all the people that buy quanity from him will get mad ,that's why people are reluctant to give anyone his number . i kept his number in my safe a few years back ,i had to keep his no. from every one in order to sell his product .....and still a few got it and promised him big orders but all they wanted was a deal on one box. the same people who called me a jerk for not giving them his no. wouldn't give it to anyone else ,they played middleman on there friends.and mad money selling 10 pills and 12pills there are about 25 dave made boxes in a 5 mile radius from me i only sold half of them. i mean above 5 pills this is dave made city anybody who is anybody runs several dave mades . i am south of new orleans in new orleans there are hundreds of dave mades . one final thing getting his no. is half the battle reaching HIM is the other. BUT HE IS WORTH THE WAIT DAVE MADE IS THE KING.....BusDriver p.s. i am not bragging but i can reach him fairly quick if i have to . so if you need something i be glad to help.....k

First of all I really don't care of your opinion on the amp or
alternator. Secondly i'll post up whatever I choose to as many times as
I wish. Don't really care what deja says as well. All this could of
been avoided had it that you people(those whom were trying to be funny)
stop trying to be comedians. I came on here only to sell these two
items believe me. I don't wish to hang around with cb'ers. Third, i
will continue to post the alternator and the amp if the M.O does not
arrive within the time frame the buyer has told me. if you are annoyed
by the posts write your local congressman. Maybe, just maybe he'll wipe
his ass with it. So have a great day along with your pal and grow up.
End of discussion!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!roly

Tsk tsk tsk! Your grammar is slipping there junior. Fixated on Merrick, eh? Figures. Well, since you aren't employed and spend most of your time attempting to agitate (you are a newbie and have much to learn), I have some time to kill so I guess I will go back to doing what I do best......Putting you on hold. If you are really on a beam, point it my way 'cause I can only hear you in the AM. The only way I even know you are out there in the afternoon is when my landline rings and someone is looking for magic. Then I turn on the radio and hand it over to the magician and he drags your hairlip from the continental divide eastward. By the way, who is that in Prescott? He's hot on your trail.

Rattails could be covered with eggs of intestinal parasites. Some of those would be shaken off onto the snacks.
Better establish a possible suit now, just in case the kid gets worms.
Hans

I tell you what... I have been away from this group for a while and I will tell
you one thing. I happen to know dave personally but, I haven't seen him in
quite a while. I think that it would be very very difficult to actually talk to
or see dave. You will probably do better dealing with 10-7 or Mr Gunn in
Carolina. You will get in touch with them before you actually get dave.
Good Luck!

The delay keeps the t/r relay from falling out between sylables. This is one of the inherent problems of of an amplfier that uses a carrier operated relay. It is far better to have key line coming from ther radio that keys the amplifier.

You cant deadkey on SSB like AM. So your modulation keys your amp on SSB and unkeys when you stop talking....If you did'nt have a delay in your transmit, your relays would clatter like crazy. so the delay slows down the unkey time on SSB where it can run a smooth transmit...73s

BusDriver,

No offense, but, the business structure in which he has for such a "company" selling illegal products is better than some. True professionalism and business ethics apply with any other large or even mid-sized business, in which Dave is attempting to simulate. Can you call Bill Gates directly with a question? Probably not, and if so, please keep me in mind. <G> What Dave is running is illegal, no reason to give it some code name.

BusDriver wrote in message <38cfaffe.15674887@news.freewwweb.com>...
|Iam afraid this is there number 1 downfall They don't have proper
|business structure. It is very hard to talk to dave , If they were
|organized there company if they had a real company would be on the
|stock market.................They have a great sout after product But
|as always they cant handle the demand. untill he sets up a
|distribution system nothing will change . If every one is allowed
|to deal direct with dave all the people that buy quanity from him
|will get mad ,that's why people are reluctant to give anyone his
|number . i kept his number in my safe a few years back ,i had to keep
|his no. from every one in order to sell his product ....and still
|a few got it and promised him big orders but all they wanted was a
|deal on one box. the same people who called me a jerk for not giving
|them his no. wouldn't give it to anyone else ,they played middleman on
|there friends.and mad money selling 10 pills and 12pills there are
|about 25 dave made boxes in a 5 mile radius from me i only sold half
|of them. i mean above 5 pills this is dave made city anybody who is
|anybody runs several dave mades . i am south of new orleans in new
|orleans there are hundreds of dave mades . one final thing getting
|his no. is half the battle reaching HIM is the other. BUT HE IS
|WORTH THE WAIT DAVE MADE IS THE
|KING.........................BusDriver p.s. i am not bragging but
|i can reach him fairly quick if i have to . so if you need something i
|be glad to help........k

At 27 Mhz the current travels more on the surface of the
conductor. The higher the frequency the closer to the
surface of the conductor it travels.

For example CATV Trunk Line cable that is not fiber optics
has about a 5/32" to 3/16" aluminum center conductor coated
with a thin layer of copper This is in 1"+ hard shield cable
and done to reduce weight.
Cheers,
John

Prozac,
I guess I should call you AL Gore. You ither side stepped the question or did not get my point. Who cares if you can talk to dave on speed dial. What is your point? I am saying you have a web site with his stuff on it. I emailed you you and ither you did not know the awnser to my questions or you just don't care. Look I don't know you prozac I just feel you run a shotty web page. If I want some info why don't you reply.
I can tell you probably mean well and get tired of the BS from people emailing you about daves stuff. I guess your web page was somthing to show Dave and somthing for you to show your buddies and brag to the ducks about. I feel you should have thought about all this stuff before building this site and flameing people, not awnsering your mail so on. I really do not care about your relationship with dave. This was business nothing personal. If your going to have a site run the damn thing stop crying about the money so on. Charge more make a little money.
If your so tight with dave when you get a order and the money call him or drive to his shop get the item ups and go on. What is so hard about that? The bullshiters won't send you the money so you do not need to worry with them.

Taking legal action on something like this is almost impossible. You would have to prove that you didn't put the rat tail in the bag. I would call the 800 # on the bag and tell them. Maybe you will get a free case of Doritos out of it.

What do you need? Most of the stuff can be replaced from off-the-shelf parts.I have a moonraker 4 that I have maintained since the early '70's. Don't think any part on it is origional now and just about all of it came from local harware stores.

The nice thing about a full-size antenna is that mounting it low on a
bumper,etc. doesn't effect the SWR or pattern enough to be concerned.

First tnx for reading this.
Antec Communications Ltd. have been manufacturing amateur antennas for many years now and have decided to move into the cb antenna market.
We have developed what we think is probably the most robust antenna for 11mtr on the market at the moment.
It is designed to be used base or portable.
Please take a look and pass on your comments.
This is also a new site and is under test so please any problems with access let us know thanks.

Even on an SUV (as I have), where you have lots of metal near the
first 3 to 4 feet of the antenna? (And I'd rather not mount it on the
front bumper!)

Looking at getting a Tuner. Though most tuners I've seen so far Only handle 200w. I have a couple questions...

Is there a tuner for sale (for a reasonable price) that can handle over 200w. if not...

Do I put in line between the radio & the amp or the amp & antenna.?

If I put it between the amp & antenna will I "blow" the tuner or just make it ineffective if I run 50w or so over the rating.?

If I run with the amp on with the tuner between the radio & amp will the amp still be effective?

thanks,
sw

I agree the meter should be between the amp and ant.
But where do you get the true swr reading from? I've seen
swr readings go up with the meter between the amp and ant.
But if you move the meter between the radio and the amp the
swr reading would be the same as if nothing but the radio
and meter are in line.So could'nt you adjust the swr at
either place?

YES,even on your SUV,think about it,full-size antennas are inherantly
broad banded so the SWR at resonance doesn't need to be as low as on a
narrow banded antenna and without a load a larger % of your antenna is
above the vehicle.
Most SUVs slope in back anyway and you might be suprised how far away
much of the antenna is.

>CB-80 3.5 - 4.0 Belching & Farting permitted on 3.950
>CB-40 7.0 - 7.3 Splatter mode, 7.2 echo-mic calling freq.
>CB-20 14.0 - 13.35 Jamming modes permitted on 14.313
>CB-15 21.0 - 21.45 Noise Toys & Roger beeps ok below 21.250
>CB-11 27.185 Restructured amateur calling frequency.
>CB-10 28.0 - 29.7 Tweak your CB a bit more and you're there!

I thought theses frequencies were already "CB type accepted".
At least they sound like that when I listen to them. Do you mean
that they are now going to make it official?

Hey , Thats pretty funny, But you know what the real funny thing is ??
Nothing is going to happen after april 15.... You could put ham radio
license on the back of morning Cereal boxes .... Just sign here, your an
extra ham and you would have NO takers. About the only thing thats going to
happen on april 15 is the already licensed hams are going to capitalize on
an easy upgrade...................

John ....

This is great, I really appreciate all these responses, I'm learning a great deal here! I just might try a full-size to see what happens. One last, hypothetical question: Let's say I install one and the lowest SWR reading on the channels is around 2:1. With a 4 watt radio (which I have), will the performance still be materially better than a roof-mounted center-loaded 6-foot antenna with an SWR no higher than 1.2:1 on any channel?

No, you would then be reading the input match of the amplifier, To measure the reflective power of the antenna the SWR meter needs to be placed where the first three people said to install it.

I don't think so, dude. The clamps that hold those rods aren't even stainless. Unless you live in Antarctica, I would find it hard to believe you can't find better than stock stainless pieces (clamps, bolts washers).

As I have said before, the amps are good, predictable, and worth the wait. I am sure that it is hectic to thumb through the e mail, I know back in the day I talked to Dave on the phone a few times, sometimes for a while and even back then he said he was getting burnt out on the amp stuff. I would imagine that he tries to stay invisible and anonymous as much as possible, the Dave amps do fine without him being there all the time.

Borrow or buy an MFJ 249b SWR analyser, and then you'll know for sure.
It simply connects to the coax (feedline) and tells you if the antenna
is resonant at a particular frequency or not. I highly recommend it.

Well I better get my stuff signed now, it will be worth something someday.
I would not even worry about that dude, I mean who wants an old TNT anyway.

Source record: 27297

I had one 23 years ago. If I remember right 9 db directional. 3 - 120 degree segments apart by using the electronic rotor (non moving) 2 segments are used to radiate a beam effect. Great overall no motor to spin, instant switch patterns. Only bad thing is low db gain for directional use, and can't tx on the flat side. An one antenna solution for local use.

I need the guy system to hold boom level which is a rod or cable made from fiberglass attached to the boom and each radial on all 4 sides for a total straight shot and SWR that is constant ..... These are not hardware items , in fact I would not buy anything for a antenna at a hardware store , most do not sell grade type fasteners or USA quality , this is why so many beams fall out of the sky in a year or two from small amount of wind , or have to bandaid them and babysit . I have had a used Moonraker 4 up and has never changed in 15 years , had a buddy "throw one up " with local cheap clamps and fasteners from XXE Hardware and it was junk in 3 years(hubs spinning , elements in the yard , etc... . You need quality fasteners for the stress a Moonraker 6 will endure (30 plus feet) , this is big daddy of the beams . Any parts for the guy system will help , I have the complete antenna now in mint shape but the persons family threw away the guy part .

Like always,
Thanks and 73's

I realy find it priceless to blame the ARRL for restructing.
They did everything possible to stop from showing up at all, and when
it FCC decided to go ahaead anyway (which was something of suprise to
me) the ARRL put forth the best that it hoped it could get on Morse
Code, yes they failed to get it (thank the gods), but they did their
best for the code bigots

10-4 good buddy.

I have my 20kw diesel generator and my 5kw CB linear all tuned up and ready to go. It'll do 5 kw with a bag of sugar laying on the D-104 key all day long, while I play Eddie Arnold records. (gag)

I can't wait to burp, pass gas, work the action and fire my guns, and tell glorious stories of killing and dismembering cats to the retarded masses that will have one of these shining new licences like me! Heck I might even get out my comode 64 and have it swear in CW at 20wpm for all those code loving dirtbags in those elite areas of the band.

See you all there. Haw Haw Haw

I guess it depends on what hardware store you use. I lived in a rural area
where you could get stainless steel clamps and hardened bolts. They didn't even
carry the poor grades like you find in some of the Super Stores. They wouldn't
stay in business long selling the cheap stuff to farmers. It was typical for
these places to have a small machine shop in the back. Anything they didn't
have they could fabricate. About the only thing they might not carry would be
fiberglass rod and the coax connector. Sources for both of these are readily
available on the internet. Then again the fiberglass rods used for electric
fences should make an excelent replacement for the fiberglass in a moonraker.

The only thing i like to say is I dont believe that davemade relys on the internet to make a living, if people out here think they have a full time scretary answering emails please get into another hobby since you must be seriously disillusioned. The people who are serious get what they want just because you send an e mail and dont get an immediate reply doesnt mean you are being ignored or put aside, do you not think they get several hundreds of e-mail weekly and have to sort thru the bullshit ones to get to the serious one. Be patient if you want some good technology be patient if you want fast Food call the other guys.

If my 148 is setting on a plastic mount on the center hump do I need to ground it? I ask this because it states in the manual that if the radio is installed on a non-metal base it should be grounded to the auto in some manner to improve performance. True?

No you cannot put it in either place for antenna swr If you are looking for antenna swr it goes between the amp and antenna, any other place will not give you antena swr.in between amp input and radio output u would be checking the input swr of the amplifier.

4703. Grounding a mobile rig?

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: jerev@my-deja.com
Message-ID: <8apiuv$o3t$1@nnrp1.deja.com>
Source record: 27322

If my 148 is hump mounted using a plastic mount should I ground it to the truck somewhere? I ask because the manual says is a non-metal mount is used the radio should be grounded to the body of the auto with an extra wire to improve performance. True?

Source record: 27323

What is so special about the Browning Golden Eagles? I found a stack of them in a shop a few days ago gathering dust. The price was over $200 for the worst looking one. The owner said they all worked. Just collectables or were they one of the best put out back in their time?

Just ground the radio with its own Black wire to a bolt some where
close it will be fine.
keep it neat use a loop conector. Just make sure it is a good ground.

4717. Antenna question fiberglass

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: myway625@aol.com
Message-ID: <20000315225639.28023.00000516@ng-cu1.aol.com>
Source record: 27336

I am currently using a 5ft copper 10k nightstick. I get a better swr then the more expensive wilson 5ft fiberglass. I believe it is because the antenna is mostly loaded at the top. were the wilson isn't. Question is I need a new antenna and I was wondering if ther were any comparible to the mostly top loaded nightstick design. That might give me a better bandwith. I don't really want to go over 5'
thanks

Just wondered.... ever listened to the pirates on 6.955 AM/SSB?
I used to send in pirate reports to Monitoring times several years
ago, but rarely hear anyone there now. (admittedly my radio-time
has also dwindled).

4726. Re: Grounding mobile radio?

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: "A.E. 352" <americaneagle352@iwon.com>
Message-ID: <mm_z4.5487$511.1524180@tw11.nn.bcandid.com>
Source record: 27345

No. Just run the power wires (red & black) directly to the battery. If you need quick removal of the radio, just add a wire connector/plug in-line wherever you'd like.You don't need a seperate ground wire from the radio chasis to ground. Fuse BOTH positive and negative near the battery.

GET ONE

4729. MONKEY BUTT!!!!!

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: tj1072@aol.com
Message-ID: <20000316005904.21918.00001997@ng-cd1.aol.com>
Source record: 27348

A guy walks into a bar with his pet monkey. He orders a drink and while he's drinking, the monkey starts jumping all over the place. The monkey grabs some olives off the bar and eats them, then grabs some sliced limes and eats them, then jumps up on the pool table, grabs the cue ball, sticks it in his mouth and swallows it whole.

The bartender screams at the guy, "Did you see what your monkey just did?"

The guy says, "No, what?"

"He just ate the cue ball off my pool table - whole!" says the bartender.

"Yeah, that doesn't surprise me," replies the patron. "He eats everything in sight, the little twerp. I'll pay for the cue ball and stuff."

He finishes his drink, pays his bill, and leaves.

Two weeks later he's in the bar again, and he has his monkey with him. He orders a drink and the monkey starts running around the bar again.

While the man is drinking, the monkey finds a maraschino cherry on the bar.

He grabs it, sticks it up his butt, pulls it out, and eats it.

The bartender is disgusted. "Did you see what your monkey did now?"

"Now what?" asks the patron.

"Well, he stuck a maraschino cherry up his butt, then pulled it out and ate it!" says the barkeeper.

"Yeah, that doesn't surprise me," replies the patron. "He still eats everything in sight, but ever since he ate that damn cue ball he measures everything first!"

i'd go with the ft-840. its the newer and better version of this radio and you can have it at your door for 650 brand new with a warranty from AES in about 4 days and its mod is easier than the 2950.

>chasis to ground. Fuse BOTH positive and negative near the battery.

....And if those wires to the battery are about 8' in length and the only
path
to ground, they'll make a pretty good 1/4 wave antenna/path for RF to get
into the power coming into your rig. ALWAYS ground the rig to the near-
est body/chassis metal you can get to easily.. use a quick-disconnect type
spade connector if removal is necessary. One easy way is to NOT use
the negative lead, but rather a small length of braid from the metal chassis
of the radio to the car's chassis.

...Regardless of what some manufacturers tell you.... NEVER fuse the
negative lead in a 12 volt system with a negative chassis ground.

The only thing those radios were good for was that annoying "SCREAM!"
they did when you keyed them. which was caused by people changing the
Cap in the T/R switching circuit, which in effect slowed down the
relay in the T/R unit, thus making feedback come through the speaker.
where the "pinger" craze of the 1970's got it's start.

I just purchased a 4pill gooserider, what I want to know is how do these things hold up. It appears to be built well, and I have heard some good things about them, How many watts driven (50 swingin about 150)should I get out of this box at 14 volts? What is the most that I can drive into this box. Are these Gooseriders compareable to Dave's boxes? What does his 4pills do? Can you drive them.Should I have Bought a Davemade? What about these Mowatts, and X-force? Just lookin for a little info on this. All help is appreciated.

John, you're trying to sell soap to Proctor and Gamble. The US is a party to the Geneva Treaties that run international radio and for the moment at least the treaty defines an amateur as being able to send and receive by ear at 5wpm. No one sold out to old farts. In the ongoing meetings, official ones and in the bars of Geneva, the code requirement is virtually certain to disappear; just don't stand on one foot waiting for it to happen. Fat Cousin Charlie did all in their power to meet your needs.

The International Telecommunications Union while it is a part of the UN dates from 1869 when Kaiser Wilhelm I found he could not send a cable to Berlin from Paris. He was in France casing the joint and invaded it the following year. Like any bureaucracy it moves a bit slowly.

So your choices are to wait - with appropriate kvetching at regular intervals like the above - or learn the code. I will take your word that you 'can't' but I question whether it might not be related to two things:

A. Mental attitude; sounds like you have a lot of personal baggage invested in CW.

B. Doing it wrong - and you have a lot of methods that will lead you wrong available to you. I have taught a lot of people over the years including one who went from nada to passing the 13 wpm in 32 days. A lot of the people who have problems are the technically competent souls who haven't learned that way and have to build a new club for the bag, and mechanically competent people - particularly those whose jobs require the same operation

to be done both right and left-handed - who can easily develop a kind of 'CW dyslexia' that can be a major nightmare to overcome. But it can be overcome. The bad news is that it is often easier to learn code at 15 wpm than 5; forces you to do it right.

Bigotry is, of course, a two-way street. There are those in my side of the hobby who believe failure at code is failure at most anything else and indicates a major character flaw; there are not as many as you think but enough to be a pain in the buns. There are a lot of 27 meg types who are quite willing to shoot off their bazoos about things they know zip about. Enough skunk shit is available to smear both sides pretty well.

Your choice! My e-mail address is open to all who have the problem. If you would like to discuss it off-group, feel free. I don't respond to flames and when it gets a little warm I just use the del key so if it is a personal problem, the chaplain is down the hall.

4760. RCI 2950 Problem... Help needed

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: BamBam <kl0an@my-deja.com>
Message-ID: <8arggm$4tj$1@nnrp1.deja.com>
Source record: 27379

Hey guys and gals.. I've got an RCI 2950 that keeps resetting whenever I turn the power off.. Now that wouldn't really be a problem if it did it the same way everytime.. Some times it'll just come up with 2600000 on the dial and you can tune from there but, then there's times when some totally weird frequency or something like 26 680 come up WITH the space in between the numbers as shown and nothing will work except to turn it off and then back on..

I know this rig has been modified for the CB stuff, I'm just wondering if there was a mod that might have caused this problem.. Anyone else have a problem like this?? Could it be an internal battery backup that's dead or what??

Any help is appreciated except for leaving the radio on 24/7.. That's not an option.. :)

I somewhat see your point. Like anyone else, if you really want
to do something, you find the time. As far as what I accomplished,
well, I accomplished what I set out to do. That is not always an
easy thing to do.

Having over a year of advanced notice isn't exactly "rushing"
into it. I definitly had to think about whether I just wanted
to sit tight and wait it out, or just get it done. I know you
didn't ask, but, had I waited for the change to happen, I would
have upgraded the easy way. But, after all these years, it just
wouldn't seem the same.

It really didn't take that much time. I only studied the
code for about 15 minutes a day. It turned out a whole lot easier
than I thought it was going to be. And, no, I am not saying that
"anyone can do it", or that "If I did it, you can to". Because
some people just can't do it. For a while, I thought I was one
of them. And, it helps me accept all the other million things that
I can't do that someone else can.

Oh well, I think I generated enough noise on these news groups.
It's been nice talking with you.

Martin

You've never heard of learning for the sake of learning? Most amateurs
don't upgrade to prove something to others--most do it to prove
something to themselves.

Quarter wave dipole? If you mean quarter wave ground plane then
they did posses a slight gain ob=ver it. About one db.

4774. Re: Best place to mount 102" steel whip on compact pickup truck

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: ssparky <ssparky2@thegrid.net>
Message-ID: <6ccA4.11990$84.1268821@alfalfa.thegrid.net>
Source record: 27393

Yes, for the best possible signal the middle of the roof is the best place, but there are legal height restrictions to be aware of. Second best is as high on the side of the cab as you can while staying inside legal height limits (14 ft here). I like putting it on the right side of the cab so it's out of my way while getting in the truck. Use a tennis ball or plastic tubing to keep from losing paint on your truck, and to keep the antenna from touching any metal while transmitting. You can fry your radio if the antenna grounds out. Happy transmitting!

Absolutely true. If you have two power wires hook the black one to the body, or better yet, run it to the battery's negative terminal. If you only have one red power wire then you need to run a wire from the case of the radio to the body (or battery). If you run the radio without this kind of ground the radio is forced to find ground through the ground on the antenna wire. This is NOT a good way to ground a radio. The best possible way to run power to any radio is to run two fat wires directly from the battery to the radio, and avoid getting the wires close to spark plug leads. Run them outside the engine compartment if possible. This will help eliminate spark plug and alternator noise. After that add noise filters as close to the battery as you can get them. Good luck!

xxxx
They were hand wired and had an excellent receiver which had excellent
adjacent channel rejection.
I have a Sonar FS-23 which is in the same class of receiver and I found
it difficult to find a new radio that worked as good as my Sonar which
is
still working just as good as new after 30 years. I settled on a
Galaxy DX99V because it was tighter than other radios I tried and
sounded
great.It's just about equal to the Sonar but not better receiving.

I saw plans for a dummy load somewhere on the 'net. It said to put
twenty 1000 ohm 1/2 watt carbon resistors in parallel. Place these
in a mayo jar filled with oil with a SO-239 in the top.

I got a one gallon paint can from the hardware store and installed my
SO-239 in the top. Should I get twenty 1000 ohm 1 watt, or forty
2000 ohm 1 watt resistors? What grade of oil should I use? 5W30?
10W40? HD30? 4 quarts of mineral oil? Help!

Thanks guys. (and girls)

Hey, yeah! And start a rat-tail file!
Did you hear about the Frankenfat coming from the same company?

Also, of course, you'd have to prove you did not willfully ingest parasites?
God. All this talk is making me hungry enough to buy a bag of Frito-Lay Rattails!

It was a 1/4 wave and I "think" it had a gain of 3 Db over a
dipole.
Cheers,
John

You are absolutely right! OBTW, why the hell should I have to learn to use an arcane mode of communications such as CW so that I can use phone on 10M & 12M, which is all I really want to be able to do? Hell, even the US Navy dropped CW from their technical requirements for Communications Technicians! I am a technician perfectly capable of doing my own repairs and adjustments to radios. I have passed all of the trial tests for Technician and General. I was once licensed as a Broadcast Engineer back in the late '60s with an FCC Radio Telephone license. But I have tried and failed to learn code. So, I am probably more qualified than those idiots out there that passed the CW test but don't know Ohms Law! IT STILL SUCKS!

Hell, even the US Navy dropped CW from their technical requirements for Communications Technicians! I am a technician perfectly capable of doing my own repairs and adjustments to radios. I have passed all of the trial tests for Technician and General. I was once licensed as a Broadcast Engineer back in the late '60s with an FCC Radio Telephone license (1st Class). But I have tried and failed to learn code. So, I am probably more qualified than those idiots out there that passed the CW test but don't know Ohms Law! IT STILL SUCKS! The FCC didn't go far enough! The caved to the old farts that hold on to their presious CW.

IF YOU WANT TO KEEP THE SHIT OUT OF THE HAM BANDS, MAKE THE TECHNICIAL PORTION OF THE TESTS HARDER. DROP THE CW REQUIREMENT FOR AMATEUR TICKET CLASSES AND LET THE CW LOVERS SELF-POLICE THE CW RESTRICTED SUB-BANDS.

4806. Re: Pwr Mike for Cobra 29??

Newsgroup: rec.radio.cb

Contrary to the flames which people usually get when asking questions about
echo on this Ng.....
The best echo mike available is the RF Limited EC2018 Turbo and EC2018 Extreme.
If you have a deeper voice, get the Extreme, and higher get the Turbo.
These mikes have very sensitive adjustments for the echo, but have an excellent
sound quality. Set the internal power/volume 1/4 turn from fully counter
clockwise, and you'll probably run your dynamike between 12:00 and 3:00
position.
If you like just a little echo, a particular sound you're looking for, I
suggest taking the adjustment knobs OFF the mike, then use a pair of needle
nose pliers to set exactly where you want it. This allows you to keep that
setting without accidentally bumping the knobs which will move easily.

4807. Re: super scanner antenna

Newsgroup: rec.radio.cb

Source record: 27426

Decent antenna, instead of very narrow pattern of a beam they radiated in 3 distinct "Lobes" using the othe two elements as a reflector., worked well if you were talking to a few people in the same general direction while trying to quiet down interference from behind. Also was nice because you didn't have to wait for the rotor to swing for direction changes. Later versions also had a switch position that allowed the antenna to function as an omni vertical. All in all a nice versatile antenna that was also very strong, mine survived a lot of Buffalo area winters and ice storms, Keep your power down arond 100W max or the relay box will cook, and never mess around with the lenght of the wiring harness from the box to the radiators, if you have to replace connections try not to trim much as this harness is critical to the operation and phasing of the antenna.Doen't have the gain of a 'Raker, but if you want to keep it in a nice small space and still have a directional antenna, tough to beat. I wish I still had mine, and if I could ever find another NOS one I'd buy it.

Source record: 27427

Actually a bit high, GXII's have been holding around 500 unless they have filters or a lot of extras, like an MD-1. Still a good point, for what people pay for a Turbo or 2990, which no matter what the ads say are NOT a valid HF rig, one can buy a damned nice 100W radio with real receive, notch filters, General coverage, yadda yadda yadda.

TS440's w/the tuner, Icom 735's, 720a,745, etc etc etc, all fall well within the $4-500 range.

Shop around,even if you don't plan on going HF now,you might at some point, might as well have a well built rig rather that a $500 echo box.

Ham radio will be better off when attitudes like this cease.
Honestly, whether you like it or not, get over it! April 15 will
come and go, you might find some new people to talk to on HF
but otherwise you probably won't notice much difference.

From what I read on these newsgroups, all the really badly behaved
ops are extras already!

Some young people might get interested and actually progress the hobby
forward in some way. Wouldn't that be amazing? Less people talking on
HF about their currentl illnesses, I'll look forward to that.

I could'nt agree more, than to say, The Tram D201, Tram D201-A, The Browning Eagle Mark IV A, and the Browning Eagle mark III, were then and even now, the very best (C.B.) rig's any-one could buy, (for any amount of money) PERIOD !!! My suggestion to you is if your interested in buying a "vintage" radio, and want to be able to say you operate the "BEST" Buy any one of the rig's I listed....You can't go wrong. Take Care.....Frank in CT.

>CLASSES AND LET THE CW LOVERS SELF-POLICE THE CW RESTRICTED SUB-BANDS.

You make some good points, but you've missed one important fact
about the code. It's an International Telecommunications Union
(ITU) requirement. If, at some time, the ITU member nations agree
that there's no longer a desire to have a code requirement, you
can bet that the FCC will drop it. It's paperwork to them, and
they're trying to simplify their job. Until then, however, the
code will have to stay. 5 WPM is the international minimum, by
the way.

In reality, 5 WPM code is SO slow that it's hard to learn. It
has no rythm, no flow. I've taught people the code at higher
speeds and they universally agree on this point. The ARRL's
Farnsworth method of teaching the code, which is sending the
characters at 15 to 20 WPM but spacing them far enough apart
to be 5 WPM, makes it MUCH easier to learn. It also makes it
much easier to upgrade. The characters sound the same, just
closer together. Well-sent code at speeds of 15 to 25 WPM
has a definite rythm to it, almost a musical quality. Slower
than that, it's harder to pick out characters. Faster than
that, it all runs together. As for me, I can copy the code
in my head at 35 WPM (no, I can't write that fast!). I don't
consider myself "special", just fortunate that the code comes
easy to me. And I don't have the attitude that if I can do
it, so can you. You'd be surprised at how many hams holding
higher class licenses don't. We're not all "CW bigots".

4816. Re: star duster antenna ?

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <346A4.5903$Nn6.180593@newsread2.prod.itd.earthlink.net>
Source record: 27435

The Star Duster was a BIG rip off in my opinion. OK, it was actually
a decent antenna for a dipole. Relatively rugged, but JUST a dipole.
Any gain figures were a fantasy. It had 0 (Yep ZERO!) db gain over
a quarter wave dipole, because that's all it was.

And I seem to remember they were $50+ back in the 70's?? Come
on!

All they were is a dipole with a flared element. This actually RAISED
the angle of radiation slightly, which was good if you wanted to work
skip. They had a little assembly in the middle of the top element
that added some capacitance and widened the bandwidth, which was
also good.

You could get MUCH better performing antennas for less money.

If you were REALLY hot on the 'technology' of the StarDuster, you
could make your own quite easily for less money.

Funnier yet is what's happening right now. And it started over a
year ago, when the anouncement was made about the license structure
changes.

If you attend a VE session right now you will find that they are
pouring in to take the 13 and 20 WPM tests, because after April 15
they won't be able to any more. For many hams it's simply a personal
issue and they could care less that the need for these tests might
not exist a week after taking them.

When I heard about the license restructuring, in Dec 1998, I
decided that this was my last chance to prove to myself that I
could do it. It took 6 months of effort but I did pass the 20 WPM
test (with solid copy) and finally made Extra. Now, I don't care
if they change everything. I did it only for myself. I have been
loving Ham Radio for over 35 years and I don't intend to stop
loving it.

Well, so much for patting myself on the back.

The only part of the change that surprised me was dropping the
13 WPM requirement. I knew the 20 WPM test was going to go away
and I thought they might lower the 13 WPM test to 10 WPM, but
it seems I was mistaken. Go figure.

> You could put ham radio license on the back of morning Cereal
> boxes .... Just sign here, your an extra ham and you would have
> NO takers.

Will that be the box of Wheaties with the picture of
the Old Man himself, Hiram Percy Maxim, on the front.
I'll by a box even if I don't need to cut out the coupon.

> About the only thing thats going to happen on
> april 15 is the already licensed hams are going to capitalize on
> an easy upgrade.....................
>

If they are willing to venture into the CW portions of the band,
I'll be glad to talk to them. No matter how bad their CW might

be in the beginning. As long as they don't mind how bad mine is.

But, no matter, it's their right to choose what license they
want to obtain and where they want to operate.

No flame intended to anyone. Just another opinion.

Martin

Correct me if I am wrong, but I believe that there is NO minimum mandated by international treaty. It simply states " a demonstrated proficiency at sending and receiving code". The AMOUNT is actually left to each country. The U.S. could have made it "one word per day" and STILL have been in accordance with the treaty.

During the Great Depression, there was this man who walked into a bar one day.
He walked up to the bartender and said, "Bartender, I'd like to buy the house a
round of drinks". The bartender said, "That's fine, but we're in the middle of
the Depression, so I'll need to see some money first". The guy pulls out a huge
wad of bills and sets them on the bar. Well, the bartender can't beleive what
he's seeing. "Where did you get all that money?", asked the bartender. "I'm a professional
gambler", replied the man. The bartender said, "There's no such thing! I mean, your
odds are 50-50 at best, right?". "Well, I only bet on sure things" said the guy.
"Like what?" asked the bartender.

"Well, for example, I'll bet you $50 that I can bite my right eye." The bartender
thought about it. "OK". So, the guy pulls out his false right eye and bites it.
"Aw, you screwed me", said the bartender, and paid the guy his $50. "I'll give
you another chance. I'll bet you another $50 that I can bite my LEFT eye" said
the stranger. The bartender thought again and said, "Well, I know you're not blind,
I mean I watched you walk in here. I'll take that bet". So, the guy pulls out his
false teeth and bites his left eye. "Aw, you screwed me again". "That's how I win
so much money, bartender. I'll just take a bottle of your best scotch in leiu of
the $50", said the man.

With that, the guy went to the back room and spent the better part of the night
playing cards with some of the locals. After many hours of drinking and card playing,
he stumbled up to the bar. The guy, drunk as a skunk, said, "Bartender, I'll give
you one last chance. I'll bet you $500 that I can stand on this bar here on one foot
and pee into that whiskey bottle on that shelf behind you without

spilling a drop".
The bartender once again pondered the bet. The guy couldn't even stand up straight
on two feet, much less one. "OK, you're on". The guy climbed up on the bar, stood
on one leg, and began peeing all over the place. He hit the bar, the bartender,
himself, but not a drop made it into the whiskey bottle.

The bartender was ecstatic. Laughing, the bartender said, "Hey pal, you owe me $500!".
The guy climbed down off the bar and said, "That's OK. I just bet each of the guys
in the card room $1000 each that I could pee all over you AND the bar and still make
you laugh!"

Subject: Sticky Situation

It seems that a young couple had just gotten married and spent their
wedding night with the young man's parents.
In the morning the mother got up and prepared a lovely breakfast,
went to the bottom of the stairs and called for them to come down for
breakfast.
After a long wait the family ate without the newlyweds. The mother
said, "I wonder why they never came down to eat?"
The grooms young brother said, "Mommy, I think -- "
"Oh shut up, I don't want to hear what you think!" said the mother,
not wanting to hear any inappropriate comments from the younger brother.
At lunch time the mother again prepared a wonderful meal and again
called the young couple to eat. After another long wait the family
proceeded to eat, and after the meal was completed the mother once
again said, "I wonder why they never came down to eat?" Once again
the younger brother started to speak, but was interrupted by the mother.
At dinner time once again the mother cooked a very elaborate meal,
had the table set perfect and called the newlyweds to join the family
for dinner. After another long wait the mother once again questioned why
they had not come downstairs all day.
The young lad once again said, "Mommy I think -- "
"Well what is it that you think?" asked the mother rather irritated.
"I think that when my big brother came down to get the Vaseline last night,
he got my model plane super-glue instead."

Anytime, kal. It gives me a way to let everyone know what a fucking waste of sperm that fucking asshole faggot Bob is in Phoenix. 27.555 used to be a really fuckin' great place to hang out and listen to dx from Boston to Bumfuck. But since fuckin' Bob has started jammin' with all his might, a whole slew of ignorant guttersluts from the US mostly, have been fuckin' up the airwaves with every-fucking-thing from music to fucking duck sounds. I'm not pissed, though. I won't let the bloody fucking queer-boy get my dander up.

No way to say as the short antennas vary from model to model.Never did
ask what freqs you wanted to cover so I figured just CB.

If you knew the meaning of the word "proficient" you would see that
the old 20WPM wasn't enough.

4844. Which radio for traveling in the Australian outback?

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: martinpi@my-deja.com
Message-ID: <vbh2dsk9mmgaoecudjpfjah08jo549okc4@4ax.com>

We plan to go up Cape York via OTR this August with two vehicles.
To stay in touch with each other and to get help in case of an emergency,
we want to buy radio sets.

Which system shall we get?

There is the old CB (27MHz), LPD with 443MHz and PMR with 446MHz.
Here (Austria) we can use all these systems without any kind of permit or licence.
Is it the same in Australia?

I am tired of these old farts bitching about the new rules on code. If you don't like it sell your stuff and go off the air. As far as all you all mighty hams talking about us so called cbers and how we conduct ourselfs what about you so called hams on 3.898 or 3.875 you could not get a group of in breds togather like these guys on 27mgz if you tried. It was like that for years and years. Your just pissed now becouse your no different than a novice. So now all you old farts with nothing else in your life but that shack can't act like your shit don't stink becouse you have a general or Advanced class. Now HF is going to hell now OH my god! Ya you know what I bet it gets better becouse the new group of guys and the FCC will run you old in bred F**ks off the air. It might become a nice place again. Oh Ya one more thing I am a damn Cber and you know what I have a Advanced Class no what else I THINK IT WAS ABOUT TIME THE FCC CHANGED THE RULES ON CODE.

From: sarhorse@my-deja.com
Message-ID: <8arot5bjs1@nnrp1.deja.com>
Source record: 27467

If i took a cb to a nice high location and set it up to operate with one
of those simplex
repeaters (a la radio shack), would this be legal? it could sure
increase my line-of-sight
range.
ok, so maybe i would need to install PL in the radios involved so that
everyone else wouldn't
accidentally (or otherwise) end up repeating on the thing.
would this be:
1> technically feasible? used to install PL devices in ham gear before
they started coming
that way
2> legal? 4 watts all around.

Ain't nobody shying up here! You obviously have been in the radio field
for a very little amount of time. It's called a ghostrider special.
Along with 5 alternators. 4 on AC and one on DC. Each alt. will produce
enogh to support 5500 watts on the Byrd. U do the math and you find out
what the box contains. And it ain't no transistorized pile of shit! I
use an eight piller for a driver! So run along now with your little
four-piller before I use you as a dummy load! I'll give u a $1000 if
you even buzz in the background. And i'll even key down with a stock
mic. I wont even go for the astatic 575m6 wrapped with ferrite! have
anice day from the real bigboys in Florida........

All day today I have been listening on the 38 sideband to people working DX. What are the three numbers they use with the state? example: 301 Michigan, 911 Arizona, etc.?

Is there an "idiot's guide to CB" or a beginners web page to learn this stuff?

Thanks,

Sent via Deja.com http://www.deja.com/

Hey Einstein... Guess the Alzheimers is gettin' to ya..

> I need the guy system to hold boom level which is a rod or cable made from
> fiberglass attached to the boom and each radial on all 4 sides for a total
> straight shot and SWR that is constant ....

These can be fabricated from Fishing poles from Academy..

Or, you can use any number of other things.. Even try a fiberglass shop (du
h)

These are not hardware
> items , in fact I would not buy anything for a antenna at a hardware store
,

>>>Then your an idiot. Most hardware stores have (if you look, and not just
grab the first thing you see) or can get anything you want.

> most do not sell grade type fasteners or USA quality

What is a "grade type fastener"... Hardware is graded on strength... . 8 be
ing the best for most people (grade 8 bolts are what the ASRA and HDRA as we
ll as NASCAR require to meet specs... I highly doubt your antenna is subjec
ted to more twisting and flexing than that of a 1100 horsepower behemoth big
block as it hooks up through slicks).

, this is why so many
> beams fall out of the sky in a year or two from small amount of wind , or
have
> to bandaid them and babysit .

>>>No, that is because most CBers think of an antenna party as an excuse to
get drunk (then put the antenna up), or they don't have instructions, or are
going by what "Jed" told them to do, or any number of other things..

>>>Face it... Cbers (by and large, collectively) are not the most intellige
nt people on the face of the earth!

I have had a used Moonraker 4 up and has

>>>You meant "HAVE", right?

never
> changed in 15 years , had a buddy "throw one up "

>>>Guess what.. Problem solved... He "threw" it up. Proof is in the puddi
ng.

with local cheap clamps and
> fasteners from XXE Hardware

>>>Did he go the cheapest route at Ace, or did he go the best route. They s
ell from grade 1 to grade 8 bolts at Ace hardware.

>>>Something tells me, that in fine CBer tradition, he bought the cheapest.

and it was junk in 3 years(hubs spinning ,
> elements in the yard , etc... . You need quality fasteners for the stress
a
> Moonraker 6 will endure (30 plus feet)

>>>Try getting a load of the Joe Gunn 8+8 Killer Star.. Or the Joe Gunn Fla
tside 8 element. Hell, my 8 element monster is twice as long as that thing
you run!

, this is big daddy of the beams .

>>>That's a joke, right? You REALLY can't be serious. Hell, Mosley, Antenn
a Specialists, Signal Engineering, Jo Gunn and quite a few others routinely
sell antennas 50 percent longer and more...

>>>Wanna fuck with my 4 element 40 meter yagi? My elements are longer than
your whole Boom! Hell, one SIDE of my elements is probably longer than your
boom!

Any

OK, was a 'center fed half wave flared dipole'.

And no, ZERO gain over a dipole. Their 'published' gain figure
was isotropic, gain over a 'point source in free space'. But
don't hold that against them, that was the 'standard' practice
to rate the antennas that way back then. Sorta like GM and
how they rated their HP figures...

Ha ha - I actually doubt that he has being stoned as an excuse at the
time.
What "73" ?? - Is that something I ought look at? I didn't let him leave the
radio here as I am quite full of stuff now.
But another funny thing is that he got another just like it. I think
they are just the same because I suspect he did the same thing to it.
Maybe it was a Sangria error? Or other stuff?
Got my CB's boxed at the moment. This is my current addiction.

Train,

I have to throw in with you on that question. My only association with extra class and advanced class hams is when they bring me their radios to program or repair. I am a no-code tech, and therefore not smart enough to occupy the coveted 7 MHz of bandwidth on the lower frequencies. However, I can operate any mode in over 100 GHz of spectrum with my no-code license. I didn't have to shoe a horse before being allowed to drive a car, and I tend to doubt the sincerity or the mere being in touch with reality of anyone who says I am not smart enough to operate HF due to my standing on principle about the code as a filter. Let those who can only rise above the dung heap to pound sand, pound sand., All others who can use other portions of their brain tend not to be restricted my non-logical demands or laws based on historical preservation. Besides, I will out live most of them. My side business (Pallbearers 'R Us) will convert most of the brass pounders to fertilizer before the debate is resolved. It is a shame that it has to come to attrition before common sense will prevail. If there is a hobby left at that point, maybe the technical side will again be revived with new blood. It is hard to come up with new ideas when your air supply is restricted to an anal rebreathing apparatus; a problem that is rampant in the older population within the hobby.

Any Questions?

```
He meant CB-11 as in "11-meter band," not channel 11. Ham rigs aren't
channelized, even the 5- and 12.5-kHz-step V/UHF rigs read out in mHz.

>If you don't want to associate, skip the post or at worse, don't
>respond. You are limited because it appears from your posts that you
>choose not to expand your knowledge in any functional way,

Functional way? Is your definition of functional way the function of
self professing your greater than thou attitude toward every one in
rec.radio.cb? Is that your functional way?

>and you have
>difficulty in comprehending how anyone else could do that. Amazing to
>me, but then I shouldn't presume anything. After all, the topic of this
>forum is CB radio, and by definition, it requires little or no technical
>knowledge, and you have once again emphasized the point of it all.
>Thanks.

You couldn't hold a candle to my overall technical knowledge. And
the reason that you think you can is because I don't go around self
professing my skills. Therefore with the way your mind functions i'm
just another lowly CB'er. This fits in perfectly with your holly er/
greater/smarter/ than thou attitude that you just can't help
emphasizing in most all of your posts. Your "functional posts".

4874. PSK31 on 27.700 USB (BPSK)

Newsgroup: rec.radio.cb
Date: 2000-03-16 00:00:00 UTC
From: Robert Walling <r-walling1@ti.com>
Message-ID: <8as2qnegf1@tilde.csc.ti.com>
Source record: 27493

Hey, just heard a station from the Netherlands on 27.700 USB using BPSK. I'm just using a simple dipole antenna. Nearly 100% copy even though his signal was weak. I was using DigiPan software to copy him. If you have a radio which can monitor 27.700 USB, you can copy these European stations also. The only thing you need is a computer with a soundblaster compatible card in it. I also copied other stations from Germany, Italy, and France. The software is very easy to use. The software can be downloaded at http://members.home.com/hteller/digipan/

Seems that Europeans are using 27.700 for digital communications, so if anyone is interested in monitoring signals other than voice, this is a good frequency to listen to.

I am receiving catalogs from the company H & Y Electronics. They are located in Louisville Kentucky. They sell alot of the products that Coppers Electronics, which is one of the most incompetent and dishonest companies in the world sells, with the exact same descriptions and pictures, and so i was wondering if the two companies are owned by the same people etc... I went to the H & Y Electronics website and asked them a couple of times if they were connected in any way with Coppers Electronics, and they did not answer me, and several weeks later their website was removed from its server...which by the way was the same server that Coppers uses. They still send out catalogs...so they are still in business as far as i can tell.

Are these 2 watt carbon resistors? I plan on taking some RG-8 braid,
sticking the resistors thru the braid and soldering them. I was going
to make some kind of structure to it to hold it together. Any web
pages I can look at? Transmission fluid has "wetting" chemicals in it
to help transfer heat. Hence "Dex-cool". I may use that if no one can convince me mineral
oil is
better.

Hamm4fun wrote:

The drive you are talking about is fine, I would not suggest 50 watt deadkey into the amp, I am saying this because I might have misunderstood your post. As far as the output, it will be comparable to the Dave amp, you should have no problem seeing 400 bird watts if you keep the voltage supplied to the amp, if you blow it up at that voltage you are doing something wrong.

You have to play with the resistors until you see 50 ohms, the more the merrier. I would use mineral oil as a first choice, Crisco vegetable as a second choice.

Yeah, fuse them both, that way you will have twice the voltage drop. A fuse on the positive at the battery and GOOD ground to the chassis (make sure the cab is bonded to the frame and battery etc etc) this is all you need, fuse this to protect the wire, not the radio, in other words don't use a 4 amp fuse.

It isn't a matter of country option tho you are correct that the treaty does not specify a speed. Within the ITU are a number of committees and sub groups whose job it is to lend some definition to treaties that are by necessity pretty broad. As a practical matter, a country does not take unilateral action unless it is willing to pay the consequences down the line. The hard fact is that no matter how much it may matter to enthusiasts, there are bigger fish to fry. The point is that our FCC went with the flow and its own convenience. Neither the no-code or pro-code factions were decisive nor particularly pleased.

I know for a fact that this is not the case. I was hangin out with two old-timers today that moved and changed their handles. It sounds simple but it appears to be effective. One of them put it best by saying "Now I'm at the bottom of the list". He hasn't heard from the FCC since 1984.

<< All day today I have been listening on the 38 sideband to people working DX. What are the three numbers they use with the state? example: 301 Michigan, 911 Arizona, etc.? Is there an "idiot's guide to CB" or a beginners web page to learn this stuff?>>

The three numbers mean nothing. They are made up, as are all CB identifiers. Incidentally, you will NEVER be able to confirm the true location of ANY of the stations you hear or talk to because they are all uniformly scared to death of being "identified by the government". God knows why, but that's the way it is on 11 meters. (Could be CBers don't pay their taxes or something?)

Cobra/Palomar XL-450, 4 Stage 12 Volt Amplifier

This is a 450 watt 4 Stage Amplifier. Low, Med, High,
and Max. You can drive it with up to 4 watts AM/FM, 15
Watts drive SSB.
This amplifier will have a PEP output of around 200 to
450 watts depending on drive. Normal 250 AM carrier
with 4 watts drive. This amp also has a pre-amp and
SSB mode. Uses 4 MRF-454 Transistors.
The amp will operate from 24.5 to 30 MHz. All Mode.

This Amplifier is Brand New and Tested.

$175.00 shipped UPS

If you don't want to associate, skip the post or at worse, don't respond. You are limited because it appears from your posts that you choose not to expand your knowledge in any functional way, and you have difficulty in comprehending how anyone else could do that. Amazing to me, but then I shouldn't presume anything. After all, the topic of this forum is CB radio, and by definition, it requires little or no technical knowledge, and you have once again emphasized the point of it all. Thanks.

Yeah he's an advanced class ham I'm sure....good thing You don't have to spell "because"to get a ham license or He still wouldn't get one on the give away plan.

Had one up for years,if I remember correctly 5.5 db gain in the omni mode
and 9.something in the directional mode,worked very well on 10 meters as
11,have ran a Palomar 350Z,driven by a FT101,through it with no apparant
damage,it has points that can corrode up in the switching box, I have
drilled out the rivets and run a points file over them before,then sealed it
back up with silicone and screwed it back together before, with good
results,I see Copper lists a bunch of parts for them still, local radio
store says he can still find them in new old stock, so they can still be
had, I have ran a lot of antenna's since 1964,and I consider the super
scanner,the best all around,granted a simple 3 element yagi,will out perform
them, but for light wind load,no rotor, and one do all antenna they are hard
to beat,I was amazed at how much of an improvement it was over the old 1/4
wave super magnum,but years of sustaining,high winds,it was disassembled and
traded off, have had a Shakespeare 1/2 wave up for about 9 years now,still
functions like new,good luck and have fun,

Wilbur,
No I would just pay off my VE like a whole bunch of you did or get a medical. (Because) "there happy" When did spelling make someone a smarter or a better operator. If we were talking about a spelling test I would have shut up. But we were talking about Ham Radio and Hams who sit around Bitching about change. No one seems to care about the real issues. We are slowly looseing freqs. Old hams die and there are fewer people becoming hams this means less activity on the bands and this means we risk loosing them. So you some wise guy points out my flaw. Boy you got me! I got news for ya I have never been able to spell. So whats your point.
Or are you just bitching.
Bean

If my memory serves me, I think they were marketed as 4.5 db gain,and were
1/4 wave,they were notorious bleeder's, it was ok, but traded mine off in
short order, I did replace the little do jobbers up on top with some extra
chromed Harley spokes,with no change to the match, looked cool, and gave it
some class too !

Yes you did. The First Class Radio Telephone license was a ticket required to operate and maintain boradcast stations; TV and Radio. You don't need code for that and there was no code requirement for the license. You just had to know your stuff about electronics, communications and FCC rules regarding RF broadcast.

We have started a DX Sideband Group out of Wisconsin. Called The Wisconsin Badger Sidebanders. The WBS group has a website at: http://members.tripod.com/~BadgerOutlaw/WBSclub.html

also We can be contacted by e-mail at wbsdx@hotmail.com

The group has net checkins on every Saturday at:
8:00 p.m.. to 10:00 p.m.. Central Time. on freq. 27.3750 LSB {channel 37}

Every Thursday 9:00 am. to 12:00 pm. on freq. 27.4850 LSB

The group was started to bring people and families together from different areas of the world to share with each other friendship and the common interest in CB and Ham Radios.

The group is FREE to join. We offer a Lifetime Membership and group # and we send out Two WBS group QSL cards to get ya started in the group. Please visit the group web site for more info. or contact us for any questions.

Happy DXing' and 73's
WBS012 TIM International Vice President & Group Sargent.

I didn't spell check it because I was in too much of a hurry to write it and yes, you are right. I discovered a couple of spelling errors. That doesn't change my opinion.

Mineral oil is the best but I have known of people usin auto transmission fluid. I don't know that motor oil will not work. I have a dummy load made of 2 watt resistors I made ages ago. Will handle at least a hundred watts dry. . Load takes the form of a 50 watt 3db attenuator followed a 50 watt dummy load all in the same can. Another can contains a hundred watt 3db pad. All is made of 2 watt resitors. By using the gradual attenuation design I get a fairly high powered dummy load with good characteristics that works well into the VHF region. Also if I need to handle more power I can always build another attenuator. By adding a 1db pad followed by a 2db pad this type of design could handle 400watts continuously without the oil.

Hey Bean,not all Ham's are like those mentioned,most that I knew enjoyed 11 meters too, it seems that there is a bunch of them that are pre occupied with trying to control the bands,granted no one wants a bunch of jammers or such , but over all there are still good folks out and about, at least on 10 meter's,what I have found is that a lot of the newer breed tend to look down on others that for what ever reason didnt get as involved as them selves with the hobby,I think it makes them feel important,but radio is what you make of it, it used to be said"ham radio,the worlds friendliest hobby",I think the so called high brow attitude of a lot of the ham people has done more to mock that saying and generate contempt for the hobby,than anything,you know the typical one upsmanship type of bs,

As CB's go they were some of the best but the receivers still don't hold a candle to a decent communications grade reciever, then or now. The value is more as a collectable than anything else. Tube type equipment does have a unique sound that I like. I had a homebrewed TX that was pretty much a copy of the Eagle III and a Hallicrafter rx. The Eagle rx would have been better. I latter went to a homebrewed rx taken in large part from a design in William Orr's Radio Hanbook. This receiver was consideraby better than the Eagle.

Mineral oil is normally used because it is cleaner to deal with and heat transfer is better (it's in there to absorb the heat). You can even use vegetable oil if you want to, but don't use motor oil--heavier to deal with, dirty, absorbs heat more slowly.

No. You are sitting on your butt, yacking about a little bit of nothing,
griping about the hams, but you aren't trying to crack a book and learn
something so you might be a better operator. Do you need a dictionary
definition of functional to understand what it means? Call the library
because you probably don't own one of those either.

I always fuse both sides if for no other reason than it is easier to repair wiring if something goes wrong or a connector needs attention. The fuse presents no problem in so far as current flow or rf exposure is concerned. It is a little over kill up front but saves time later when doing repairs. Why would someone recommend NOT to fuse both sides?? BTW, always solder the connections in the wiring harness leading to your radio to avoid evil things from happening......

Gary,

I thought that hams did not work 11 meters. No one else than me.

I had a space problem in my vehicle with all the radios and the stuff
wired in. The cure was to go buy an Icom 706.
6meters, 2 meters, and a built in 100 watt CB. I even got a 160 watt
linear for the 2 meter output, so that I can work some of those aligator
repeaters in this area.

Life is good. Does anyone know how to wire an echo mike to a 706?

Radio Oger

How do I get to the FAQ for this newsgroup? It might save some questions on my part. You have all been very helpful and I hate to wear out my welcome with these questions if there is one place I can go get answers.

Now the question: Where do you get amps for CBs? Can you use an amp that is designed for 10 meter ham use? A short course in amps appreciated.

Exports R Us is a good source for Amps. You can get there through www.Bigradios.com. then going to retailers. In answer to your question Yes, you "can" use a ten meter amp. They do not say that they can be used on 11 meter, CB, because it is illegal to do so. Of course it's only illegal if you get caught!

YA you got it right. Don't get me wrong. I guess I was a little upset about something that happened on a local weather repeater last week. It was bad. All it was a misunderstanding on who was taking the reports it turned into a big mess and a fight between the control operator and the N. weather service. It is those times that we are in the public eye more than others. The general public listening on scanners must have thought the control operator was a ass. I know there are hams that love there hobbie just as I do. I guess I feel that if your bitching all the time than it must not be fun any more so get out. Don't ruin it for the rest of us who love are hobbie.

>Best place I've found is on a tool box.

...An excellent choice, but minus the tool box, several
friends of mine have built brackets that mount across
the bed (in the stake pockets) and mount their 103"ers
to these brackets... build the brackets for quick removal
in case you need the bed for hauling. You'll still hit low-
hanging trees, but toll booths and bridges will be OK.

It gives a sense of personal accomplishment. Something similar can be
obtained by getting the ARRL CW speed endorsement stickers (I assume
that the program will be continued).

I don't know about you, but the things in my life that I appreciate the
most are the ones where I had to exert effort to accomplish.

Sure, and there are many CBers love to wave the fact that they can talk
DX without a license in the face of Hams.

There are such people in both groups. Most Hams and CBers just get on the
air and operate - and do not brag about what license or station power they
may or may not have.

: which is exactly as it should be.

Exactly. I will be getting my Ham license again, after a lapse of about
20 years. It will be the Extra Class license. I plan on spending just
about all my time in the CW segments. After all these years of not
being able to get my speed above about 10 wpm by listening to the code,
I am hoping I can do so by actual on-the-air practice. The Novice
bands were hopeless - few seemed to be able to manage over about 8 wpm.

: forum is CB radio, and by definition, it requires little or no technical
: knowledge, and you have once again emphasized the point of it all.

Careful, Gary. You are painting CBers with the same brush that some CBers paint Hams.

There are many CBers who are as knowledgeable about electronics as most Hams - some who know more than all but a small majority of Hams. They just have decided to enjoy the CB hobby - rather than the Ham hobby.

I have found that the more knowledgeable (in both hobbies) seldom engage in bashing the other group. They just provide accurate information to questions that are asked - seldom making judgements on the legality of some intended action.

Dilon Earl wrote in message ...
> Why would you NEVER fuse the negative lead (in a NEGATIVE ground system)?

...Very simple actually....
If the negative lead fuse blows, the fault current (assuming it's not instantly high enough to take out the positive fuse as well) will flow through the chassis, coax, or any other component in your rig that forms a path, maximizing the "smoke" factor.

Electrical Codes are quite clear on the subject of NOT fusing BOTH wires in almost any AC/DC system except in ungrounded, "floating" machine control circuits.

They are not that good. One good thing to keep in mind - if the dB gain figures are given without a reference antenna, then they probably stand for dBoverexaggerated.

In omnidirectional mode, they had slightly more gain than a 1/2 wave vertical - 0.5 dB at best. In directional mode, the gain was about 2.5 dB or so over a 1/2 wave vertical.

The advantage was not the forward gain - it was the reduction of the unwanted signals in other directions that was the main help.

I can provide a reason FOR fusing the negative lead. It covers the
rare situation where the negative battery ground fails (or develops
a high resistance). In either case, if the negative lead of your
CB set is not grounded - it acts as the ground for your entire
automobile - which means the wire is going to get rather hot.

Using PL on CB would be legal, and using 4 watts is legal. The main thing that would make it illegal is this:

"RULE 19 - Remote Control Operations - [TOP]

{A} You MAY NOT operate a CB station transmitter by RADIO remote control."

This part of the rules makes repeaters, simplex or duplex, illegal.

I don't know why CB's don't come with PL installed. It's legal, and would reduce the amount of unwanted signals heard.

Sorry, but I find it difficult to believe that you were hanging out with TWO persons who had "moved and changed their handles" as a result of being busted by the FCC and ordered not to own/operate any radio equipment (in return for not paying a NAL). Most of us have to dig a bit to find ONE person who has had an FCC case go to court.

Changing one's "handle" is not as effective as you might think--unless they keep their operations squeak clean and don't attract attention. A court decision (and associated probation) is recorded by identifying factors other than one's CB "handle". If your two old timers get caught again in a radio violation (as was the case of the Houston individual in the original post), they are "dead meat".

Best regards,
QRM

Technically, this would not be RADIO remote control because
the repeater is NOT keyed while you are. Unless this device
is type accepted for connection to a CB radio, it's illegal.

>I might be bithching but read my other post maybe all
>this will help you understand a little better. It is a non issue to you
>that is fine.

The point is that the majority of times when somebody makes a post relative to rule changes in the Amateur service, it is NOT a ham. I don't see a lot of them coming to the CB newsgroup to "cry on your shoulder".

On the other hand, posts like yours try to stir up some kind of CB Vs Ham arguement. If you check, you will find participation is such threads is much less than, say, two years ago.

I conclude that the regulars on here are getting tired of that subject matter. If you're a ham, as you claim, take that $^#& to the Amateur news groups.

Whilst this agreement is in force the minimum is not specified, rather it states that you must be proficient in using CW. However there are several countries that are signatories to this agreement but they do not adhere to it - one example being Japan. In Aust our no coders (with full call theory) have access to the FM portion of 10 metres - and the Japanese have gone much further than this.

I was shocked to hear such common sense from a pro CW individual. It is a refreshing change as unfortunately there are to many who keep their head stuck in the mud with the attitude that I had to do it - and therefore so will you. I will think about learning morse at 5wpm but I have to say that as soon as the test is over and done with I will throw the key in the bin - or maybe hit it with the biggest sledge hammer I can find.

A jackass like that one is real easy to spot. If you wait and listen they've always got something stupid or insignificant to say.

The numbers are unit numbers that identify the operator and his state.

Well as far as having your hand over my mouth well thats real funny!
I'd like to see that trick sometime. Number two, i am freefielding and
getting those numbers and the box is capable of 40Kw but why go balls
to the wall when I can cut your radio clean on a dead key from here to
Chicago! As far as my handle is concerned it is 21. Remember those
numbers peakaboo(if that is your handle)cause i'll be listening for you
on the super bowl (channel 6) Get off 19 with the truckers and try to
key on a real channel. And if SSB is more your taste well I can do that
for you too. I'll just simply point it at you from the base and drop
3kw on a raker 6 and let's see if your heard there as well! Believe me
I whave outspent you when it comes down to this subject so if you can
go to your credit union(if applies) and ask for a loan to build
yourself a real station! Oh and just in case you'd like to know what I
run at home it's called a Heathkit SB220 which is driven by a no imps!
(1-3-500z). Have a great day and I also offer RF treatment if you need
it! Once again from your friend down south.....Worldwide 21...i'm
out.....

1. I don't know that this newsgrop HAS an FAQ. If so, it should be published monthly at a minimum.
2. Since you are new to this, you should understand that CB by law is limited to 4 watts AM transmissions and 12 watts SSB transmissions, and by definition, the equipment must be type accepted and in order to comply with the law, can not be modified .
3. Amateur HF amplifiers are commercially manufactured to handle 15 to 160 meters but normally can be easily modified to handle 10 to 12 meters as well, but this is a function of federal law. No commercial amplifiers are made for 10 meters only--only amps made on the black market for 11 meter CB purposes. They may call them 10 meter amps and then wink at you.
4. Amps are available through various internet/mailorder dealers and through your local CB shop. Ask him what he has behind the counter and assure him you don't work for the FCC. Also, check www.deja.com for old messages which would lead you to internet dealers.
5. Check the rules at www.fcc.gov before you make your purchase to make sure you understand what laws you are violating by using an amp and what the consequences of such action could be.

its always best to fuse both leads.....I usually don't but I
should. ... however I do if the wires go straight to the
battery. there's nothing worse than having a wire melt down
under the dash....stinks too..

It's called "bragging rights". It's nothing more than the ability to
tell a newcommer that you earned your license the "old way", which is
SUPPOSED to convey some sort of superior status over newcommers.

Strictly an ego thing.....

Yeah the two watters were carbon. I hear you can use metal film too but have never tried them. If they aren't too inductive they would be a lot better than the carbon.

Wow Brian, you've found yourself a real friend
on the newsgroup. Friends like this you have to keep
close by so you can talk to them, Stimulating conversation.
I was never concerned about you keying over me, I
was never worried about not being heard, I was pissed
over the constant spamming of the newsgroup that you
were doing. Like others have found out here, there are rules
on spamming and Deja.com is no exception.
As a matter of fact.... Abuse@Deja.com, send the
full headers with an explanation of your complaint and
they will resolve the matter. So little man I hope you
have another ISP, because you had better read the rules
first before you go spouting off that you can swear, threaten,
Spam, and do a lot of things that Deja.com does not allow.

Ta Ta for now,
The Landshark

5002. Some Advise!!

Newsgroup: rec.radio.cb
Date: 2000-03-17 00:00:00 UTC
From: Prozac <Prozac@BayshoreNetwork.Com>
Message-ID: <hFrA4.2776$S4.12881@news1.rdc1.nj.home.com>
Source record: 27621

Some advise!! If you email Dave Made:

1.) Know what your looking for! They cant decide what you want.

2.) Don't ask to compare with other amps! You got to judge for your self.

3.) Don's ask for a discount on a box, they list a very competitive price already!

4.) Don't ask you visit Dave's shop! This isn't the Willie wonka factory.

5.) Don't ask for a color catalog or a free sample of anything they build!

6.) Don't mention the competition (x-force no-name mo-watts- or any others) in your e-mail!

7.) Wait till they reply to you before you start asking questions. I know they get a lot of email cause I get over 50 a week asking about Dave made and I can tell you that if you are long winded you email is going in the trash.

It is the ratio of impedance to nominal impedance.

Antennas of 100 Ohms or 25 Ohms at your operating freq would
both have a 2:1 SWR on a 50 Ohm system, would they not?

Okay, seeing the last one didn't work.

here's is something I got via e-mail... it's virus-free, (i scanned it...) it's cute and quite funny. it's an exe file...

hint: click on the numbers on the microwave oven...

hehehe

last time i checked the only 21 i ever heard getting his name called daily on
the bowl for about the last 10 years was Long Distance 21 from the big horn.
you must have heard folks comming back to him and thought they were calling you
and that shitty looking green sb 220 wouldnt work for a driver for that duck
and his big ceramic tubes on that big ass beam he's using. get real, your
trying to tell peak about your gooserider box when he is good friends with
gooserider himself. were all texas boys here man, tollfree included even though
he misses home.

5024. CW signals "bombing" 27MHz right now

Newsgroup: rec.radio.cb
Date: 2000-03-17 00:00:00 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <8atpt3gcp1@slb7.atl.mindspring.net>
Source record: 27643

I live in Mass. on the Worcester/Holden line and
right now my Grant XL is showing basically the
whole 27MHz (well at least 27.025 to 27.905 that
I can find right now) area being overrun by
what sounds like computer-generated CW.
It seems to be actually on USB but punches through
even the AM signals of a friend who lives 4
miles away. My Grant XL has picked this up both
in my truck (102" whip antenna) and at home
(V-quad antenna) but my PRO2066 scanner doesn't
recognize any of this from my vehicle (Antenna
Specialists Mass. State Police issue VHF tuned
antenna). In fact, on 27.025 the PRO2066 can hear
"339 southeast Arkansas" lima charlie and no CW
whatsoever.

Anyone else?

5025. Cobra 2000 Brand New in box

Newsgroup: rec.radio.cb
Date: 2000-03-17 00:00:00 UTC
From: hillbillydave <davesNOdaSPAM@oztech.com.invalid>

Source record: 27644

I just purchased a cobra 2000, its new and in the box...I was
the first person to take it out. wanted to make sure it still
worked.....this is a factory virgin rig.. and I'm gonna sell it.
thought I'de give the group a chance at it befor I put it on
E-Bay
the man I got it from bought it for his son a few years back and
got mad at him and never gave it to him. been stored in a
closet ever since....open for offers

dave

27F has a frequency counter I believe, and can be
modified for 200 (or even 600?) channels...either
way it is the more desirable one...

I totally agree on the exagerated gain claims by manufactures,they all tend
to be bs

To begin with I have never heard your name called on the bowl nor on 26. Secondly the only person I have heard with that handle happens to be in prison at the time for narcotic trafficing. I am a very good friend of Darryl's and have been doing business with him for about 5years. I do not key down the base regularly due to the neighbors so most of my dx'ing is in the mobile. I don't see the point you are trying to make here responding to these posts so sincerely your a waste of time and effort typing. Maybe you should come down to miami and key down whatever u like with me. Let's see your front end blow up! As far as my SB220 is concerned, it happens to be in mint condition and has 4 eimacs in it! And while we're on the topic, i've never recalled hearing texas come in on conditions unless I point it at your dumbasses. On the base conditions are not needed. I make my own. tee house and I here locally can confirm that with a few other big boys down here. Including cha-cha, camaguay, 55, 125, 712, and grim reeper! So don't try to downplay my setup just cause you cannot afford it! Like I said in the e-mail I sent you earlier, come down to miami and key against me with whatever u like to bring! Stop the bullshit posts cause your soft and have nothin on me. have a great day big boy in texas.....
timnebo@aol.com (God Father) wrote:

To begin with I have never heard your name called on the bowl nor on 26. Secondly the only person I have heard with that handle happens to be in prison at the time for narcotic trafficing. I am a very good friend of Darryl's and have been doing business with him for about 5years. I do not key down the base regularly due to the neighbors so most of my dx'ing is in the mobile. I don't see the point you are trying to make here responding to these posts so sincerely your a waste of time and effort typing. Maybe you should come down to miami and key down whatever u like with me. Let's see your front end blow up! As far as my SB220 is concerned, it happens to be in mint condition and has 4 eimacs in it! And while we're on the topic, i've never recalled hearing texas come in on conditions unless I point it at your dumbasses. On the base conditions are not needed. I make my own. tee house and I here locally can confirm that with a few other big boys down here. Including cha-cha, camaguay, 55, 125, 712, and grim reeper! So don't try to downplay my setup just cause you cannot afford it! Like I said in the e-mail I sent you earlier, come down to miami and key against me with whatever u like to bring! Stop the bullshit posts cause your soft and have nothin on me. I've been in the game for many years as well as a ham operator so have a great day and reach deeper in the pocket! get your fat heels ta' clickin'.....

sounds like your using a preamp and your radio is being over loaded. sometimes
it will also pick up sw broadcasters.

I never thought I could see a thread where your posting would be the most knowledgeable. E-Mail me for your year's supply of zit cream, John.

The SWR bridge is the most dangerous tool in radio and you are in the process of proving it.

I'll say hello to Bubbles for you and Guido says hi, too.

To begin with I came on here with the intent to sell items that I was not utilizing. You guys have made smart remarks, insults and have also spammed on this newsgroup. If anyone here is to blame for all this it is all of us whom have added to this childish behavior. And not leaving out Mr. Liv2cruise whom posted the first remarks that were intended to disrupt my sale of the TNT amp. As like every other vendor here if you have not recieved the money for an item you have posted up for sale you reserve the right (being that the item is yours to sell)to post it up how ever many times you please. I am not new to all this and frankly have not liked this newsgroup in the past. So all these headaches were anticipated and as well as all of your sarcasm and remarks. Let it be known that I came on here to sell only three (3) items and have recieved nothing but grief. Am not crying about all this but what is right is right! You and the other parties involved are to blame. I was simply returning the hostility I recieved on this group. I hope Deja personel view all of these postings and find that I am telling the truth and all the negativity could of been avoided! If I posted up the amp too many times, oh well. I believe that is within my right. Correct? And as far as if it was indeed posted up too many times, how hard is it to simply look over? Is it that hard to glance past the posting? Or were you all just being trouble makers and couldn't resist busting somebody else's chops? Being that you guys are cb'ers that is to be expected. That comes with the territory. Sometimes bad manners can carry over from cb to reality. I must remind you all (those whom directed attacks to me) that this is a newsgroup not channel 19! So at this I leave it to Deja's hands to find the resposible parties and deal with them accordingly! if I am amongst those at blame, so be it. have a nice day and next time this can all be avoided if people would just mind their own business..Insults and smart alecs are not something society likes....

To begin with I came on here with the intent to sell items that I was not utilizing. You guys have made smart remarks, insults and have also spammed on this newsgroup. If anyone here is to blame for all this it is all of us whom have added to this childish behavior. And not leaving out Mr. Liv2cruise whom posted the first remarks that were intended to disrupt my sale of the TNT amp. As like every other vendor here if you have not recieved the money for an item you have posted up for sale you reserve the right (being that the item is yours to sell)to post it up how ever many times you please. I am not new to all this and frankly have not liked this newsgroup in the past. So all these headaches were anticipated and as well as all of your sarcasm and remarks. Let it be known that I came on here to sell only three (3) items and have recieved nothing but grief. Am not crying about all this but what is right is right! You and the other parties involved are to blame. I was simply returning the hostility I recieved on this group. I hope Deja personel view all of these postings and find that I am telling the truth and all the negativity could of been avoided! If I posted up the amp too many times, oh well. I believe that is within my right. Correct? And as far as if it was indeed posted up too many times, how hard is it to simply look over? Is it that hard to glance past the posting? Or were you all just being trouble makers and couldn't resist busting somebody else's chops? Being that you guys are cb'ers that is to be expected. That comes with the territory. The 11 meter ham band was 26.96 to 27.23.
Radio control models ran at 27.255. When the move was made the region was generally considered to be garbage frequencies because of TV i.f. at 26.75 and old diathermy machines. The space between probably never had much in it anyway.

Buck congratulates you on a semi-intelligent question.

Dick BK

5039. Re: Hey AB7RadioShack

Hey AB7RadioShack, a well made antenna mounted in the center of the roof will always do better than a bumber mounted whip which bends back 90 degees at 35 miles per hour!!! As far as the failures of the K40, I've had one for 5 years and have never had any problems with it. Theres a lot of BS about the K40 having failures (especially from illegal amp users) but until I have one, the K40 is a good antenna in my book. I've used a Wilson 1000, 5' Firestik, Xterminator II, and yes the UGLY 102. The only 2 mobile antennas I currently use is my good old K40 and a quarter wave Anttron 1700 which has a 2 foot fiberglass bottom shaft (10 gauge copper wire wound) and a 4 foot SS whip.

5041. Re: What are "A" channels?

Newsgroup: rec.radio.cb
Date: 2000-03-17 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <pxvA4.8367$kv6.376929@newsread1.prod.itd.earthlink.net>
Source record: 27660

These were actually another CB service. The spacing of the CB channels if you look closely leaves room for one additional channel between channels 3-4, 7-8. 11-12, 15-16, and 19-20. And there were TWO channels between 22 and 23.

The 'single' channels were all RC stuff, and I THINK one of the channels between 22-23 was also RC (the higher one if I remember correctly). The RC stuff was pretty much limited to tone control stuff like the old Controlaire equipment with reed systems and the like. Power was limited to 500mw, and an ID was NOT necessary. The Radio Shack pager car alarm also operated on some of these frequencies. I don't think RS ever shipped an alarm on the channel between 19-20 or on the channels between 22-23, they were almost all on the lower channels.

When they went 40 channel, they did NOT reassign the lower single channels, but took the two channels between 22 and 23 to make the sequence go 21-22-24-25-23-26-27... and so on. The rest of the way to channel 40 is sequential 10khz steps.

What became 25 was the one that I think was RC. The one that was 24 I believe was some kind of business use that never really got assigned.

If you looked at the way the 23 channels were assigned, the channel that became 24 was actually there, just not activated, as it was in the 'crystal matrix' for how they did the channels, and it was fairly common for people to wired that into their selector switches. What became channel 25 was not really accessable unless you added a crystal. But once the PLL units came along, then channel expansion was a digital hack and quite easy on most rigs.

Harry answers the telephone, and it's an Emergency Room doctor.

The doctor says, "Your wife was in a serious car accident, and I have bad news and good news. The bad news is she has lost all use of both arms and both legs, and will need help eating and going to the bathroom for the rest of her life."

Harry says, "My God. What's the good news?"

The doctor says, "I'm kidding. She's dead."

Source record: 27666

By the way, the change of CB from 23 channels to 40 was NOT to
make a magical number like 40. Originally it was to expand to 99
channels, but objections were raised over having a single service
that is fairly popular and heavily occupied being more than 455khz
wide. By keeping CB to 40 channels, that meant that channel 1
to 40 was only 440khz wide. The concern was two stations
could generate a 'mix product' by transmitting at the same time
and wipe out anything nearby with a 455kh IF, which is almost
anything.

I personally think the danger was very overrated, but that's the
arguement that managed to get CB cut to 40 channels.

because channel 23 was known as the base station channel and it was farther
away to keep to qrm at a minimum.

Oh? What is it then? I kinda figured it was. but correct me.

It is feedback (internal)

the 20pf cap and above

slows the reciever going out and causes the harmonic feedback

the ping can be altered by waving the microphone across the 2 pieces ending your waving above or near the end of the reciever

so you are really correct in you answer

By the way the ping was an accident that users like and remained

kind of like the ol 2520's that had the bad mute circuit (factory talk back at some shops)

Give me a Johnson and a Mark III receiver anyday

If the DIODE is still not correcting the problem, you might need to
replace the voltage divider as well. Part # MB3756 ... I dont have the
location of this but if you need to, I will find out what IC# it is

5054. Modification web pages

Newsgroup: rec.radio.cb
Date: 2000-03-17 00:00:00 UTC
From: Michael Willey <photog101@mailhost.det.ameritech.net>
Message-ID: <38D296E9.4CA15B13@mailhost.det.ameritech.net>
Source record: 27673

To the NG:

I have lost my book marks for different radio webpages. In those
BookMarks were numerous pages that contained modifications for radios.
Both ham and CB. Right now I am looking for a chip switch mod for a
Uniden PC122, and the mod for unlocking that clarifier. I also need the
mods to peak the radio, then back it off 10%.
I also have several other radios on the bench that need to be tricked
out, so these webpage really help out for the following radios.
RCI 2990
RCI 2950
Cobra 148 GTL (old style taiwan)
Emperor 5010
Kenwood TS 520 (trio)
Kenwood T&R 599 (trio)
Drake TR4B
Any help will be appreciated. Thanx in advance:
M:)

Some vehicles will tell you real quick if the negative at the battery should be fused . . .

Some GM's are fused at both from the factory the same way

Some fords with the Lucas series of alts do this

I will always fuse both when goes to radio . . .

Amps just the Positive at all feeds

my life, family, your family are not worth the small voltage drop that most will se

Probably not much. Neither one are worth bragging about.

The point is that anytime someone does something for the primary reason
of elevating himself up to a higher plane, wrt his peers, it's nothing
more than self-praise, a poor substitute for mutual respect.....

Dave

5065. Re: What are the 3 numbers (stupid nubie ?)

Newsgroup: rec.radio.cb
Date: 2000-03-17 00:00:00 UTC
From: jarrylaw@aol.com
Message-ID: <20000317161337.13637.00000483@ng-cp1.aol.com>
Source record: 27684

There are a half dozen different people using the number/handle "911" in the state of Arizona alone. You could go there right now and set up a CB and start calling yourself "911 Arizona" if you chose to. Since there is no way to control who uses what number - the "number and state" callsign is an extremely unreliable method of identification.

I fail to see what's stupid or insignificant about this information or why I am a "jackass" for posting it.

Alfred Jarry

><< A jackass like that one is real easy to spot. If you wait and listen they've
always got something stupid or insignificant to say.

The numbers are unit numbers that identify the operator and his state.

One night, a torrential rain soaked South Louisiana; the next morning the resulting floodwaters came up about 6 feet into most of the homes there.

Mrs. Boudreaux was sitting on her roof with her neighbor, Mrs. Thibodaux, waiting for help to come.

Mrs. Thibodaux noticed a lone baseball cap floating near the house. Then she saw it float far out into the front yard, then float all the way back to the house; it kept floating away from the house, then back in.

Her curiosity got the best of her, so she asked Mrs. Boudreaux, "Do you see that baseball cap floating away from the house, then back again?"

Mrs. Boudreaux said, "Oh yes, that's my husband; I told him he was going to cut the grass today come Hell or high water!"

A little boy is waiting for his mom to come out of the changing room while shopping with her. The little boy gets bored and when his mom comes out, she finds him sliding his hand up a dummy's skirt. "GET YOUR HAND OUT OF THERE!" she shouts. "DON'T YOU KNOW THAT WOMEN HAVE TEETH DOWN THERE!"

The little boy quickly snatches his hand away and thanks his lucky stars that nothing serious happened. So, for the rest of his life, this poor little boy grows up thinking that all women have teeth down below.

By the time he reaches 16, he finds himself a girl. One night, while her

parents were out of town, she invites him over for a little action. After a few hours of making out and grinding on the sofa, she asks him to go a bit further.

"What do you mean?" he asks.

"Well, why don't you put your hand down there?" while pointing to her privates.

"HELL NO!" he cries. "You've got teeth down there."

"No I don't," she responds.

"Yes you do," he says. "My mom told me that you do."

"No I don't," she insists. "Here, look for yourself." With that, she pulls down her pants and gives him a little peek."

"No I'm sorry" he says. "My mom already told me that all women have teeth down there.

Oh for Christ's sake!" she screams. With that, she whips off her panties, throws her legs behind her head, and says, "Look, I don't have any teeth down there."

He replies, "Well, with the condition of those gums I'm not surprised."

I have hearing very good things about this rig, KENWOOD TS 440 AT. Is this a good performer? I hear they do very well as a AM radio with plenty of audio for a solis state rig. How does this radio rate to you?

I would very much like to beef up this rig! Anyone have any hot mods for this 2510 copycat. The v-power fades in and out there is places on the board that are not soldered(fixed those)! I would like to upgrade componets but which ones? Thanks Guys Also chech out this mod need someone to fill in the blanks on the locations for the two wirers!!!!! http://members.tripod.com/~P_Dookie/ssb/ts5010.html

Thanks NG

The more resistor wattage the better, If you cannot find mineral oil, use
Crisco cooking oil, or whatever mineral oil you can find.

5087. Re: Cherokee AH-27 vs AH-27F...what's the difference?

Newsgroup: rec.radio.cb
Date: 2000-03-17 00:00:00 UTC
From: palco@palcoelectronics.com
Message-ID: <38D2C30A.C3766AC0@palcoelectronics.com>
Source record: 27706

The difference is that the Cherokee AH-27F comes with a frequency
counter built in.

so your horizontally polarized,less noise!

As far as the failures of the K40, I've
> had one for 5 years and have never had any problems with it. Theres a
> lot of BS about the K40 having failures (especially from illegal amp
> users)

I don't use an illegal amp and when I did it never caused a failure,the failure is a crack in the loading coil where the whip holder goes into it.This is very common and is cause by hitting something or in my case a violent side to side motion when I pulled up to a mailbox.I have a toolbox full of peoples busted coils.

Dave, aren't we supposed to keep up with the Joneses? Aren't we supposed to envy his achievement so much so that we pull ourselves up to his new level? Which just pushes him to achieve even more than anyone else, making them even more envious?

Brian

Ask any CBer that's clipped his modulation limiter and runs a kilowatt. I
guess they think that a so-called "10 meter" radio that covers 25-28 MHz
should be heard across its whole range! BTW, anyone have a used SW
broadcast transmitter for sale? 50KW should do it.

Yep, it is. But I want to know WHY the gas prices aren't fueling a big rush
to the CB shops to get CB's to find where the lowest price is, like they did
in '73 & 76 ! Have the people become too geeky & Hambobo like ?
Dave!!!!!???
Actually you can get a larger bottle of brake fluid (different brand) for
cheaper !

Now this is a lovely response, nice, courteous, what you would
expect from someone who went back and read the rules. I did leave
ONE comment to begin with, along the lines of THANK F___ING
GOD! Now if you feel that was harassing you for a long time,
well my friend you should buy a better clock to tell time with.
You are not within your rights to post the same item almost
everyday, up for sale, it clearly states that on Deja.com's rules.
I have not, and do not in the near future expect to put items
for sale, so that claim that I have spammed the group is not true either.
What I love is the comment that it was OUR fault for his behavior
maybe we can analysis this and find out the root of your behavioral
problems, Bad childhood, abusive mother & father, too nice of
mother or father, only time will tell if with counseling and proper
treatment your tendency of Out bursts and Foul temper can be helped.

A similar argument was supposedly the reason TV channel 1 was never assigned. In the old days, the local oscillator ran 21.5 MHz above the top edge of the channel being tuned. With the LO running at 71.5, a set tuned to Channel one could obliterate the sound carrier of channel 4. That was not totally hokum because a lot of tuners were filthy and it was not uncommon for nearby sets to put a herringbone on a picture. A lot of sweep tubes had parasitics as well which showed up in the picture as garbage along the left side of the picture and were radiated (still are if one doesn't do a good job of amp design).

A lot of water has flowed over the wheel since then. Modern TVs run LOs 41 MHz above channel edge, standards apply to receiver radiation, radio control is safely caged in the 72-76 band.

I am not sure if the fear was wiping out every 455 kc if in the vicinity or 1 and 41 carrying on a pissing contest. In either case, I don't think more modern gear would have a problem; like you, I am not sure it ever was a problem.

>
> QRM

I was about 3 years old at the time so I am no expert. I believe one that was assigned was WNBC. Someone may well have thought the lo-band would be supremely valuable but it really hasn't worked that way has it. With TV pix i.f. at 45.75 these days, it would still take cast-iron cajones to do much in that area although cordless phones did not seem to present a problem.

There were some conspiracy theories at the time and not without some foundation. Pre-war FM was 44-56 MHz and David Sarnoff viewed FM as a threat to his TV medium. Some believed there never was any serious intent to use Channel 1. The battles between General Sarnoff and Major Edwin Armstrong are, of course, legendary.

A lot of things including CB were products of increasing pressure on land mobile (CB is technically land mobile). You mention the cell phones etc. which are in what would be Channel 70 and above. In major metros, the S and T bands familiar to scanner fans are used as mirrors of the 450-470 UHF band so 14 thru 21 are sort of gone as well. One of the great idiocies coming up after our inferior digital TV system is introduced will be that TV sets will, by Act of Congress no less, still have to tune frequencies that will not be used for TV. One hopes that will be fixed but with the Republican's notorious inability to govern (at least without attaching a cute name to a bill) don't stand on one leg.

If you like to indulge in speculation, what do you think will happen when the US clears the VHF freqs? Being the last nation to abandon VHF (anyone

who thinks US technology is supreme is an idiot) there is some possibility that 76-88 will become an FM band as it is in parts of Europe, with any luck not on 200khz channels of 1930 FM. The hi-band will be gone in about an hour and a half. But what do you do with the 54 to 72 segment? I am not sure what the Europeans do with it.

I was talking local the other day on 14. There was some guy talking like he was on his own talk show and playing rush limbugh. He was playing rushes music and telling jokes so on. He did not idenify himself. I thought he said somthing about tuson az. Anyone in tuson on the NG know who this guy is? He was real long winded.

I find it ironic that in todays paper, the U.S. is 'suddenly' lifting sanctions and 'buddying-up' to Iran after two decades. Gee... maybe we want THEIR oil! A little 'waffeling' by slick Willie and the boys??? Maybe the Government (both federal and state) should temporarily do away with their 45 cents per gallon gas tax. Naaa... then welfare would probably suffer. Silly me.

Well, the Landshark has always had a very inflammatory presence out here. It's been going on for at least two years now. He fights with everyone who even hints at opposing him in any way. It's a shame... because I think he is somewhat knowledgable in many aspects of this hobby. I keep hoping he will grow up and rise to his full potential...

>
I used to have a MAGNUM 2000 bi-linear,
(125 W, AM, 200, SSB).
When I turned on the receive amp, I would get the network links from the
baseball stadium 40 miles away on the 26.XXX band.
Turn it off and it was quiet as a morgue.
Either you have a very sensitive receiver or a tremendous preamp. My Grant XL
hears nothing out of the ordinary.
Good luck.
Jeff

5113. RE; CB- I am getting tired of this

I am really getting tired of hearing about how bad HAM RADIO is going to be. I think it is going to be great. The worse thing that I can see is the mentality of some of those who are doing all of the crowing. But like it or not, change is coming my friend. Look at it as an oportunity and it will be. look at it as a problem and it will be. Why don't we offer to help the new people by making this a program of attraction. Set an example. Why not give it a chance ?

The only thing I see happening by all of this talk is that this newsgroup is going down the dumper

You might want to check with your local US post office. If it is a larger one they likely deal with Canada Post stuff all the time. It would probably depend upon the size of the package and the declared value so it's a tough call. Could be sitting at some customs desk at the post office in New York, or it might be on a guys shelf in Toronto. Check your post office or get a number to the post office customs desk.

Source record: 27735

>>>So, you think a gallon of gasoline is expensive, huh??
>>

In my city, we have gas prices from $1.47 to $1.51 per gallon.

My fill-ups usually are just under 10 gallons.

1.51 minus 1.47 equals 4 cents per gallon. Times 10 gallons equals 40 cents.
I fill up twice a week. 80 cents. How far do I drive to get to the cheaper gas,
vs. how much it costs me to get there?

80 cents a week. Has anybody quit driving (or turned in their SUV) over this?

Meanwhile:
A Florida radio station was giving away 10 gallons of gas to the first 100
people who visited a particular station. Folks began lining up before dawn.

10 gallons times $1.50 equals fifteen dollars.
3 hours waiting is equal to getting $5/hour.
Worth spending time in line? Might be, for some. No for others.

>I want to know WHY the gas prices aren't fueling a big rush
>to the CB shops to get CB's to find where the lowest price is, like they did
>in '73 & 76 !

I believe the difference back then, Dave, was that gas was SCARCE. It wasn't
just the price. Station after station ran out. Or so they said.

Here's a question. When something happens overseas in the oil fields (like an
increase in the price of crude), why does the price at USA pumps go up
IMMEDIATELY. Was there not something in the pipeline?

While we're on the subject, what's the price for 87 octane over in Tennessee?

Carbon resistors work fine.
I strongly recommend you use mineral oil or Shell Diala AX.
AX is the oil used in transformers and contains no PCP and
components do not discolor or get weird after being in AX or
mineral oil.
If you use tranny oil the cb bands may start slipping after 50,000
cycles.

I often wondered that myself. Why DOES an increase in crude oil IMMEDIATELY show up at the pumps? And a price decrease takes weeks to trickle down to the consumers. Out here, the Indian reservations DON'T have to pay taxes, so people are enjoying the much lower prices. Same story on tobbacco products. I say, MORE BUSH in 2000. Sorry,Al...

I have heard about the loading coil problem. I guess I'm really lucky to never have mine break. The K40 has a few flaws, but it also some nice features which Wilson 1000's don't have, like an adjustable base for proper polarization, 1/4 turn quick disconnect, easy mounting via truck or magnamount, and better ears.

5126. Shakespeare 740 AC Cable Wiring

Newsgroup: rec.radio.cb
Date: 2000-03-18 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8av7o2ico1@slb2.atl.mindspring.net>
Source record: 27745

I need a rundown of the connections in the power cable for a Shakespeare 740 Rig. It is an older 40 channel tube rig, similar to the Robyn T-123B, Gemtronixs 2300 and Teaberry Model T. The AC connector is an 8 pin octal male, and I need to get the pin designations for the AC cord. It looks like it routes the filament voltages through the standby switch when powered up, but I would like to confirm this before trying the wrong guess and letting all the smoke out.

Thanks,

David

>assigned.

Actually, very early TV receivers have Channel 1. I wonder if there were some assignments made which later were moved to 2-13?

I've always suspected that the 6 MHz occupied by channel 1 was far too valuable and was reassigned in the 1950's to the rapidly expanding land mobile service. We saw such a move again when UHF was shrunk from 83 channels to the present level to accomodate cell phones, etc.

That's what *you* would do. I looked at an 840, picked it up, shook
it, etc.etc. The FT757GX - II by the way - weighed about 4 times as
much as the 840. Now I don't know how you feel about things, but I
feel a '57 Chevy is *much* tougher than a 2000 Cavalier.
This thing is solid as a rock, has FM,and as I said "fully capable"
from 0.000.0 to 29.999.9..... NO mods required by the buyer.

If anyone is wondering about the operation of this rig, I'm uploading
a zipped pdf file of the QST lab test and report on the FT757GX, which
is almost identical to the 757GXII with the exception of the CAT
system, and the 500K switch is called the H/G switch.

If you don't have a viewer for pdf files, get one free at
www.adobe.com/acrobat

all the radios are made in the same place, icom has the 3rd floor and gets the parts first and makes there radios. what parts are left are sent to the 2nd floor for yaesu to use in building there radios, ater yeasu gets done they send all the surplus junk to the 1st floor and let kenwood pice together radios out of whats left. check the records, currently kenwood has the highest return rate on new equipment having to come back in for service.

Meaning...a frequency display, or an actual frequency counter? Mine is marked as an "AH-27" on the unit, but a "AH27-F" on the box. It has the digital frequency readout...but not an actual counter (that I know of.)

I did notice on the Maco that it was easier to get the SWR just about flat on the 26 mhz band. However, I WAS able to get it flat at 27 also. It just took a little more time and adjustment. Never had a problem with the hoop yet. Antenna is 5 years old. Currently, my swr's are flat at 26 and 1:3 at 27. The higher the freq., the higher my swr. I enjoy it more than any other groundplane I've owned with the exception of an old CLR2 I had in the 70's.

You can't say that Radio Controlled is trapped or locked in 70 to 76 Mhz.
Until last year I raced radio controlled cars and my frequencies were
26.995 and 27.145 and 27.195.
So long as the DXers from CB channel 6 weren't in the area we had NO
trouble what so ever.
I wasn't the only one that used these frequencies either. Just ask those
who used it that screwed me during practice what I called revenge. Funny
thing happens when you key a radio tuned to those frequencies when somebody
is running a car on them.

Vince, with all due respect, why are you burning so many bridges? Logically
you are accomplishing nothing but contributing to your own demise.

Restructuring certainly was NOT the ARRL's idea, or even their submitted
alternative plan. The FCC brought this on, if you are upset, direct it
towards them. I feel it was a long time coming however, so I suspect
anything you will do would probably be futile.

Please try to refrain from crossposting to eight newsgroups.

Hello Dave: I'd sure like to see a"Super Starbuster"

I have been working on the MaCo V5/8 for a good friend. The aluminum is soft and easily bent. The matching systen allows the antenna to have a 1:1 SWR at the lower frequencies from 26.5 to 26.7, but at the mid band frequencies the SWR is 1:1.3, not bad but you would think you could adjust the antenna to have a 1:1 SWR in the middle of the CB band.

He replaced the matching hoop with a solid 3/8 inch aluminum tubing, and added a special clamp to the base assembly to prevent the vertical element from coming out of the base assembly.

Yep sure would be nice to buy a antenna that worked, had high quality parts, and looked bitchen! Maybe someone needs to come up with a New Design Penetrator 500?

Source record: 27789

Hello,

I Have no ground, limited space CB antennas up on a Ebay Dutch auction for $29.95. These will mount virtually anywhere, indoor, outdoor, or mobile and are a good alternative for those who can't install a full size antenna.

The Auction ends 3/19 9:58 pm cst.

You may see them at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=282648734

This is a Dutch auction, which means no worries about being outbid at the last moment, or the price sky rocketing because of bidding wars. You bid you get one!

Be sure to check our other auctions and website for other great deals on Amateur, Scanner, and CB, Antennas.

Thank you

People don't realize this about the FCC: If they had *really* wanted
to "destroy ham radio", all they would have to do is to do *nothing*.
It plays right into a bureaucrat's natural desire for inaction.

Their R&O, on the other hand, is every bit a *hard* dope slap to the
bitter old meanies, including not a few of the ARRL, that change has
to happen to save their (and our) beloved service; it's an effort to
save us from ourselves.

I would not cry if some of these bitter old meanies departed us. Not
a bit.

Take care and 73's,

> "Sandbagger"

You guys need to reread the original post on the comparison. You
will see that the test was between an Antron W/O radials compared to
another antenna W/radials. There is your 2 "S" units.
This is NOT to say that the overall gain from the antenna with
the radials is 12 db. It just means that this antenna is providing
an angle of incident that put more energy towards the test
receiver's location.
I would also say that there is probably a difference in the
mounting locations between the two antennas wherein the possibility
does exist that the Antron is in one of those little "dead spots"
that moving it 10 feet one way or the other might fix.
Furthermore, I don't really trust the calibration or the agc
action in any radio until I provide a test on that calibration. I
can agree easily with the above post on the way most rigs "S" meters
work.
All of these conditions I mentioned can and will make an antenna
look great or poor. Just have to realize the limits of the tests and
what will skew the results.

A local ham idiot used to sit on his porch across from the model airplane park and key his 500 watt Globe King on the hi end of the 11 meter band, say about where 22 is now, when 27.255 (the present 23) was the only place for a plane to run. Probably pulled the wings off of flies for amusement as well.

I could have said it better. By getting the RC stuff into the 72-76 range and separating aircraft from cars and boats some of the conflicts in the 27 meg range have been reduced. It is, of course, perfectly legal for you to run on freqs actually assigned for the purpose. I have used 53 megs for RC so I am well aware that 72 or 75 is not a ghetto. The context was 40 (and why not 99) channel CB.

As some have noted, some old uses for 27.255 live on. There is probably a taxi company somewhere still trying to use 27.xxx for dispatch. I doubt if a whole lot of new equipment is available in the range. Can you still buy equipment for RC on those freqs??

Hope you are willing to spend some money. I sold my 500 for $3000.00.(it can be seen at Toll Free's page at wwwbigradios.com in the Johnson section) Of corse it was rebuilt from the "frame" up wih Pete tranformers and chokes,new tubes,resistors,caps,paint and new silk screened front panel. Looked and worked better than new. You will be lucky to find one in working order for around $1500.00 on up.

Good luck,
BigBamBoo

What "Records"???? I'd love to "check the records", but they don't
exist. They are not on the MFGR's websites, I CALLED 2 of them & both said
they never "publish or release" return rates stats on their radios, So please
tell us in detail about these "records" that you seem to know about.....

My first post seems to have vanished so I'll try again.

1. Small linears? Which is best for use with my micro-Midland?
I'd like something that I can wire to the cig lighter circuit
and not to the battery (firewall passage is almost impossible).
Should I get something that supports SSB now even though I don't
use it?? (I might later.) Or should I just get a straight amp.

2. Will my base coil magnet mount K40 handle the extra output?

3. What's a good SWR meter for not too much?? I've lost my old
trusty Shack model.

Ok, here's the deal...

I have to mount an antenna in the attic...just can't get the permission to go outside...an 18 ft. just will not fit...

It has to be omnidirectional!!!

I really need the help of this newsgroup and anyone experience with doing just this very thing...

It will be in the attic of a two-story house so hope that helps...I should be able to get about 9 ft. of clearance...

many thanks in advance...

cleve

it must have been the angle of radiation because both antennas were the same height about 30 feet apart. the guy was in a mobile and they were both on portable poles, i could hear with my ear and see the difference on the s-meter between the two. one has eight radials and one had none so there is a difference in the two. the radio is a brand new ft840 so its set as good as yaesus qaulity control for the calibration of the s-meter because i havent touched it.

I'd like something that I can wire to the cig lighter circuit
and not to the battery (firewall passage is almost impossible).

I couldn't get through the firewall on my vehicle either, so I just ran
wires under the carpet, and through the rubber hose that houses the wires
for the doors and then inside the fender and to the battery. That worked
for me, just a suggestion in case you want to try it. I'd just suggest
wrapping the wires for the CB with electrical tape to prevent chaffing.

First, pick your operating frequency. Then do the following:
1. Simultaniously depress and hold down the TUNE & P.A.
Cathode switches.
2. Quickly peak the P.A. TUNE knob for maximum wattage.
3. Quickly peak the P.A. LOAD knob for maximum wattage.
4. Re-peak the P.A. TUNE for maximum wattage
5. Release the TUNE and P.A. CATHODE swithes.

This should only take about 10 seconds or less. Re-tune your radio after
moving 50KHz (five channels) in either direction of the initial tune-up
frequency.

Only to those who are not going to be able to force Morse Code on to people, they will be quickly be made the fool of when it is entirely removed as a requirement in 2003.

They will also be quite amazed to see how Morse Code will take off and become more popular than ever in the second half of this decade when people turn to it as a fun nostalgic mode when it is not something that is forced opon anyone. No one wants to learn or do anything that they are forced to do "just because" someone said so. Wait and see how many people decide to learn it on their own once it is something to learn and do JUST FOR FUN! Wait and see!

I had to learn it "just because" I had to in order to talk on a microphone on HF. (as silly and illogical as that sounds) and never used it ONCE after getting my license. Once the code requirement is removed, I will be one of the first to relearn the code (have since forgotten all but 4 or 5 letters of it) and start using it once it is not a forced upon me like some rapist.

5213. Transistor question to AMPLIFIER Bubba's...

Newsgroup: rec.radio.cb
Date: 2000-03-18 00:00:00 UTC
From: "Mr. 137" <ac137NOacSPAM@iwvisp.com.invalid>

Source record: 27832

My M400SE DAVE burnt. All pills (one 2290 and four 2879's) are toasted. The 2290 has a "5E", two 2879's have "6E" and the other two 2879's have "7E" printed below JAPAN on the pills themselves. The question I have is if I do go ahead and replace these pills, should I replace them with the exact designation thats on the pill itself (i.e. Toshiba 2SC2290 Japan "5E" driver, Toshiba 2SC2879 Japan "6E", etc.)? Or can I just replace them with any combination of matched pills?

I am all ears for any comments. Thanx fellas...

5216. Re: What are "A" channels?

Newsgroup: rec.radio.cb
Date: 2000-03-18 00:00:00 UTC
From: Meg A Hertz <meghertzNOmeSPAM@hotmail.com.invalid>
Message-ID: <03a4d9b0.d9afaaaa@usw-ex0102-016.remarq.com>
Source record: 27835

In Europe 68 is the top of Broadcasting Band I (TV OR land
mobile)

from 68 to 87.5 is used for land mobile, PMR etc.

So... let's re-cap...
The original 23 channels fitted around the model freqs
3A, 7A, 11A, 15A, 19A and the next channel 50kHz higher
27.245 (22B). 27.235 (22A) was skipped because it was
used for something else. When the rest of the 40 were added
in 1977 it was decided 22A and 22B could now be used for CB
(24 and 25) as well as continuing on from 27.265 to 27.405 (with
the happy coincidence that the first two decimals matched the
channel number there).

Any further info, folks?
Thanks,
MegHz

Go through Gall's public safety supply. They sell equipment for emergency services, and have great radio mounts. I bought a simple one for $40. It holds 4 radios. I've got my 2950, a scanner, a UHF two-way and a switch box for my lightbar. It worked out good.

www.galls.com

They've got a good selection. If you don't want to spend the $$$, make one out of materials using the concept.

Turn the noise blanker off - does it go away? If so, I'll explain why.

If you are using a magnet mount, yes. If you are using a permanently mounted antenna, I would not worry. Why? A perm' mount will bring the chassis (box) of the radio to the same potential as the vehicle chassis - or ground. A magnetic mount antenna will leave the ground -floating-. The chassis of the radio is not a direct DC connection to the negative of the power input - and therefore not DC grounded to the vehicle. This is done to allow the unit to be used with a positive ground vehicle (very rare nowadays). Will it still work even if it is floating? Yes. Will it work better if grounded? Yes. You are more likely to encounter problems if the radio chassis is not grounded. Problems could be RF re-circulation or -hot- box problems with the radio chassis radiating energy. An ungrounded radio can actually provide a better VSWR than a grounded one. This is due to the additional losses in the ground system masking a less than perfect antenna. The reality is though, even if your grounded VSWR is worse than your un-grounded, the grounded -system- will be more efficient. VSWR is not synonymous with efficiency.

I disagree. Normally, there is no negative DC path through your typical CB radio. Grounding the negative lead is a waste of time. If the CB is specifically labeled NEG GND ONLY, there is merit in fusing the negative lead, as Bill pointed out earlier. If you've purposely grounded the chassis of the radio, and this is not a bad idea, a negative line fuse is a banner idea.

Gain was 2.15dBi (or 0dBd if you prefer). Good radiation angle, but a 5/8 will out-do it by a slight margin. The directional modes could be useful for nulling out noise.

MC

I wouldn't be concerned with the loss through a fuse. It only develops resistance when it gets hot - just before it smokes. It is perfectly safe to put a higher rated fuse in the negative lead if you're really anxious about losses. Any excessive current through this fuse will not likely be traveling through the circuitry in the radio, but more likely down the shield of your coax cable and through the radio chassis back to the battery. 20A will quickly blow and cover off any whipped starter cable issues. Coax shield and radio boxes can handle a lot of DC current without heating up.

Theoretically the top loaded is the best - all else being equal. But by a very minimal margin. However, I've had the best luck with base and center loaded antennas. For whatever reason the top loaded units I own have very narrow bandwidths. These are the fiberglass stick varieties. They do work pretty good though, but not as good as the Sirio 3000 (6ft base loaded) I'm using now or the Les Wallen Modulator (7ft base and center loaded) I usually use. I still maintain that the Modulator is the best antenna for bandwidth. It has a 1.5:1 bandwidth of >2MHz and a 2:1 of 3MHz+. The antenna works well and the copper windings on the coil are much larger than say a Firestick. I'm no antenna guru, but I suspect that the capacitance between the windings in the two coils has an inverse effect on the frequency and effectively de-Qs the antenna. Of course, you could argue this is a -lossy- mechanism, but the reality is that capacitance exist across the windings of the coil in every loaded antenna. I suspect they've engineered this -loss- to work in their favor.

MC

The answer is yes. But, I betcha you could optimize that bumper mount antenna. However, armed with your ride, I would install a 6ft, base loaded antenna in the middle of the roof and call it a day. Bumper mounts can be very directional whereas center roof mounts radiate equally well (or equally poorly) in all directions.

hee hee.....

Where I used to work the broads kept all the trimmed transistors leads. At the end of the year they'd sell them to a gold smelter and use the money to buy Christmas presents that they would have a draw on. (There were a LOT of snipped transistor leads). Gold is used to stop any chance of oxidization. This is particularly important in RF transistors - although admittedly this is of little concern to the cheapie splatter-box crowd.

Keep this ground wire as short as possible - say six inches. Additional wires from the ground of the antenna (bracket) in as many different directions will help too. But, be practical.

DO NOT connect a linear to the cigarette lighter socket! The small gauge wire leading to the cigarette lighter will not support the required amperage. And NEVER to the fuse box either.

I use a pair of Top loaded Wilson Silver Load antennas and two lug-stud type mounts on my big rig, but it's easier to mount this on the truck than it would be in your El Camino.

Unless you are willing to drill and bolt a mounting bracket with an upright bar in the bed of it, and mount the antennas right behind the back window that way.

Mine's only 8'6" tip to tip, as I used the 4' model Silver Loads, and the top of it is 13'6" tall, which is the height of the truck... Shouldn't be too difficult to get it to work with some minor mods to the inside of the bed in your El Camino. You could even use the 2 or 3 foot versions, which would be 4'6" and 6'6" tip to tip, respectively.

Hope this helps.

Interesting. I found one station in central NC which is $1.43/gal. Everyone
else is $1.47 to 1.55.

Hope Dave/Debby will respond. I'm planning a trip to Tennessee in late April.

Um.....is your 2950's B+ run directly from the battery or from the fuse block at a point where it's only hot when the key is on? Just make sure it's B+ is from a source that remains "hot" all the time. The neweer 2950's don't have batteries for backup they switched over to caps and that's why newer ones have to be connected this way..... just a thought...

On the way to work the other day I saw a what I believe was a Wilson 1000 (maybe 5000) on a guys station wagon. It looked like he had some sort of ground plane attachment. 4 (possibly 6) stubby radials of about 2 or 3 inches in length just under the coil. It didn't appear to be a home-brew concoction. I believe I've seen something like this before. Any Ideas what this guy had. 2 or 3 inches cant be much of an extra ground plane can it? Or was it boosting the coil somehow?

Might want to check the facts with the manufacturer or at least the
owners manual. Most 100 watt radios are not going to pull anything real
close to 18 amps. More like 12-14 amps. I use a Kenwood on rtty and it
will run all day at about 12 amps with 100 watts out. Most radio
manufacturers--Yaesu, Kenwood, Icom also sell matching power supplies
and typically they are 20 amp supplies.

Those weren't counterpoise radials,they are supposewd to add capacitance
but wires near the top would work better if ma way to support them was
devised.Look at a bugcatcher.

I sure hope everyone got it, you sure sent it enough times.
This isn't a binary news group on top of all that.

I hear you, I am using nettamer do download news groups, and it sure takes
a long time to download that crap.

I remember back in the mid 60s, hearing all those tones in and around
channel 23.

Yep, that's a Wilson 1000 ground plane kit you saw there.....had one myself at one time. See the movie Twister, the stormchasers have them on their trucks. They get lots of comments but do absolutely nothing to the antenna performance.

yes good question, what in the world did you do. btw, the m400se is a
2x4 amp you have the 1x4= m400.if you smoked the driver pill along with the
others you probably hooked it up backwards or have a serious swr
problem.

Hello & Good Morning Dave,
A "Schlock" is usually someone old, set in their ways, not
flexible in there opinion, lazy, won't go that extra mile,
argumentative, rips you off..... Enough kidding
around :^)> It means some one who really doesn't care
for anyone other than themselves, cheap, inferior, trashy.
Which fits Copper to the tee, Brian's definition of them is perfect!

Not into Yiddish, huh? Schlock refers to poor, bad, or substandard quality of workmanship. You had your car's tranmission rebuilt and on the way home it fell out onto the highway. It was a schlock job. The bum on the corner is begging for money to send his illegitimate daughter to beauty school. HE is a schlock.

5318. Re: Price of Gasoline

Newsgroup: rec.radio.cb
Date: 2000-03-19 00:00:00 UTC
From: oneqck76ta@aol.com
Message-ID: <20000319124350.02165.00001994@ng-fe1.aol.com>
Source record: 27937

As to that, The paper and local news has said it is the canadians that are cutting back the suplly of crude oil to the U.S. and canada. Sorry if I offended you. And I also have many relitives in canada so It is not directed to you but the people that suplly us with oil witch happens to be Canada. I didn't mean to open a can of worms.

oneqck76ta@aol.com

You've got '459' out of Minneapolis Minnesota standing by!!

****Hippie Freak****

Don't forget to visit http://members.aol.com/oneqck76ta/cbradio

5319. FS- High Voltage Transformer for tube Linear- BIG!

Newsgroup: rec.radio.cb
Date: 2000-03-19 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000319124823.28338.00001159@ng-bk1.aol.com>
Source record: 27938

For Sale- Had 3, 1 left - 4000 VAC with a center tap- 2.1 amps, 175lbs, see pic @http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference forsize in the pic. These transformers are very big and have alot of duty cycle.
They are removed from 5KW HF Jammers used by the military. They have multiple taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred volts to suit your needs. It also has a center tap. $250 each. They weigh 175lbs each so pick up near Philly is required. I will be at the Trenton/DVRA Hamfest, the Baltimore/Timonium Hamfest, and the Warminster PA Hamfest so I can meet someone there with them also.
Thanks for looking,
Jim

5320. Re: Greetings to Jackson area USA !

LandAdolph:
Tell uncle Adolph we said hi & that he IS your father. Sounds like same communism is there--4 watts ! Do you mean that the US "bros" are heard in the black forest over there? Are you in East Commy Germany or the West side? Also ask them how the unification of the east brought communism to the West side & ruined the country (W. Germany)! Just stay away from the beer! OCT-Tung ?
Dave!!!!!!!!

>get a one, if it would hold up, thanks for info.................

.....Assuming your assessment of the rig's Amp draw is correct, you would need a larger power supply to operate at full power (100W)... BUT you could get along nicely operating at slightly reduced power... try running at 50-75 watts (the fella listening for you will notice almost no change in your signal strength) and you'll save the cost of a new power supply (if $ is an issue)

5322. Re: Sam's Photofact CB Radio Books

QRM Y2K:
I go between Ohio & Tenn. once a month. I am amazed to see the prices ALMOST uniform in the 3 states. But there is some lower places. Where are you going to in Tenn.? If down I-75, stop at the 11 in KY & fill up. They are the cheapest to Ohio & until K town which is @ $1.39-1.42 or so. Most of the places are around $1.50. It is definately a controlled conspiracy to KILL the LITTLE MAN TRUCK DRIVERS (Independents) and I heard also the small non-corporate truck stops. I heard it will KILL the Little Man & give MORE $$$ to the CORPORATION (JB & Schneider). Also when you come, don't bring any liberals with you OR any QRM, since we have enough of it on 27.185 MegaCycles these days. If you are near the "A" channel border, go there & get me some Coffee Crisps, Aero bars & Jersey Milks! I'll pay you for them. Also bring come ICE COLD snow then, since it will be warm/hot here when you come. Is your middle name "Heterodyne?" Or is that your wife's name? MY MAIN question remains: YOU CB shops in da cities that mainly sell to 4 wheelers: DID you notice an increase of CB sales because of the high GAS prices yet, like they did in '73 or '76 ? People then bought CB's to learn which stations have the lowest prices by asking on the CB. Now the Devilvision does that here (the cheapest prices in town announced once a week). When people abandon CB, they will go to the Devil (vision)!!!!!!

What argument are you talking about? Why was UHF shrunk to 70 Ch. instead of 83? Was it cell phones? I thought they took channel one away to give it to da 6 meter Hambos, so we can tune our non-digital TV's in the 70's to hear them below Ch. 2 ! Would there be more CB TVI on Channel one, or 2 or 5 ?
Dave

yup thats why most ssb radio's sound so great with insufficant amperage,it sure is!!!!so if you have a chance to try the 20 amp unit , fire the damned thing up and try it , if you have to lay out $,get what your radio specs call for, most ssb radio's transmitting on ssb,sound like crap without the proper power, your, I'm assuming getting your licence and going to be using that in the legal and proper bands it was intended for?lol,an example of what I'm refering to is a lot of folks will try and run a Cobra 148 on a 3 amp supply,works great for AM,but on SSB,its just doest have it, sounds like your transmitting under water,to save yourself from fighting this problem see if you can try the 20 amper out, and put it through the ssb test,I'm assuming one of your bud's has it,if so great, if not get what the radio specs call for,over the years its been my experience that its better and eliminates a chance of problems going a bit over on amps,have also had good luck in the past with a deep cycle 12 volt battery,and 10 amp trickle charger in line as a power supply,the battery eliminates the ac hum of the charger,how ever you go about it good luck,and 73's

Wrong. you do not need a set of matched pills. the same lot number is more
than suffiecient. just because he smoked the pills means nothing about a
problem with the amp.
excess volts and high swr can cause this but to blow the driver pill as well
means severe
overdrive to the amp or it was hooked up to the power (V+) backwards which
will blow all the pills.

Now this is the problem with the demented religious right, no concept of reality. The problem with Dave is that he is so confused about real religion, he can't see the truth in front of him without a bible in hand. You really have to worry about an individual with so much distorted truths, he can't understand anything other than Bible thumping bullshit! The problem with you Dave, is you just don't know shit! plain and simple, NOTHING! Passen Sie gut auf! aufpassen Du tust mir leid. Mit Ihnen bin ich fertig!

it should work fine i have a 840 too and i'm pretty sure it will be ok. if not i use a small switching supply that can be had for 99 bucks at bills2way that works jutst fine. 23 amps and the radios lights do not dim or anything like that at 115 watts out.

What happened to Channel 1 on tv?

Why was UHF shrunk to 70 Ch. instead of 83? Was it cell phones?

YUP and they just took away some more channels in certain areas for Land
Mobile.

I thought they took channel one away to give it
> to da 6 meter Hambos,
Notice you don't like the Amateur Community but that isn't the answer,
the world wide
allocation of six meters is between Amateur/Broadcasting. Old Channel 1
was at
44 Mhz but that was taken for Land Mobile/Public Service in the early
1940's.

so we can tune our non-digital TV's in the 70's to
> hear them below Ch. 2 ! Would there be more CB TVI on Channel one, or 2 or
> 5 ?
The Amateur Community would not use six meters for a long time since TVI
due to the IF of TV sets would cause some to get their "Worked All TV
Sets
Award!"

Martin N5PZJ (Equally at home on 1.855 as well as Channel 19)

Why dont you all stop crying. Try here in the UK, six dollars a
gallon AND we have a pipeline from the North Sea with almost
unlimited supply of the best oil in the world Brent Crude. Mind
you the b*stards are still charging six dollars a gallon.

It cost me approximatly $90 US to fill up my tank!!!!!

The .FM domain is an Internet country code domain name, just like .JP
(for Japan), .MX (for Mexico) or .CA (for Canada). .FM is designated to
the Federated States of Micronesia under the Internet Assigned Numbers
Authority Domain Name System. BRS Media is an exclusive agent for FSM
Telecom for purposes of managing, marketing, and registering FSM
Telecom's top level domain, .FM to the broadcasting and internet
industries. The Federated States of Micronesia (FSM) is a small
developing island nation in the Western Pacific Ocean.

I had a courier "Royal" tuber,beutiful radio.The chassis was
aluminum and the face was purple with gold trim.I had to give mine
away for free but if you could find a collector it might be worth a
few bucks.

The .FM domain is an Internet country code domain name, just like .JP
(for Japan), .MX (for Mexico) or .CA (for Canada). .FM is designated to
the Federated States of Micronesia under the Internet Assigned
Numbers Authority Domain Name System. BRS Media is an exclusive agent for
FSM Telecom for purposes of managing, marketing, and registering FSM
Telecom's top level domain, .FM to the broadcasting and internet
industries. The Federated States of Micronesia (FSM) is a small
developing island nation in the Western Pacific Ocean.

A lot of amps aren't that great of a match to the radio. If using different lengths of cable between the radio and amp makes a difference in how much power it puts out you can put a matchbox between the two and set it for optimum drive of the amp. This is a lot easier than cutting cable and you can get it "just right", something you may not be able to do with trimming the jumper. The down side is the added expense and the extra stuff under the dash or on the desk. Doesn't have a thing to do with the antenna match but there was somthing in the previous post about messing with the length of the cable between the radio and amp for best power.
Also with this setup you can adjust for best match to the antenna when the amp is bypassed. Something you can somtimes have a problem with when running an amp.

HA HA I know what you are too.... and so does everybody else.

What Rumors have you been hearing? I only hear the TRUTH of what they do to their customers! DO NOT buy from them! Support your LOCAL CB SHOP (Little Man) instead, or one day you will see BIG brother raising the gas prices to put YOU out of business!!!!!! Boycott ALL Louisville, KY corporations !!!!! (They even make their preachers pay an "occupation tax" there!!!!! That city supports muslim Cassius Clay!!!!
Dave!!!!!!

Were the 11 alternators all hooked up & working in parallel or what? Did
they stick out of the hood like the air scoops in the 70's cars? Did it
"blow smoke?"
Dave!!!!!

The length of the jumper is not important and neither is the power
discrepency,you should stick with what you have for a while then
evaluate if you really want the illegal stuff.

That would all depend on the size pulley you were using on the alternator
and whether or not you are talking about a full load on the alternator or
not. I can tell you this, you should have no problem running this alternator
on any motor out there V6 and above, it will put a little bit of a load on
the motor but not enough to give you any problems.

Why would you purchase 2 sets of matched transistors? They might be totally different from each other. If the amplifier is class c he would be fine just replacing them with all new transistors from the same lot.....Period.

Is the RCI 2970HP a decent unit ?
How about with the Wilson 1000 antenna ?

I'm getting both as my first CB unit and need input.

I'm also studying the channels to stay away from, but is
there anything else I should know ?

I understand all of the high output legal answers
so please, no big brother responses.

Is this really a nice unit and powerful as advertised ?

There should never be any problem with the ground wire if you go to the chassis with the ground from the radio as soon as it leaves the radio, if you run it all the way to the battery (which I don't suggest) then you could have problems if the only path to ground for the rest of the vehicles accessories were routed through the radio and coax, this could happen if the wire going to the block came loose and someone had solder jumpers from board ground to radio ground. If you ground the radio to the chassis of the vehicle this should never happen.

thought pills were perscribed by a doctor think they don't know difference
between pills and output transistors maybe they think they are intelligent
saying pills instead of output transistors

It's a shame you need the government to tell you the difference between six people in AZ. I would not have a problem with it at all. In fact Most people I know wouldn't either. I have two long-time friends with the same numbers in Los Angeles ("245") They call each other "My Numbers". There are a lot of guys in this NG that can tell them apart just from what I've written. Too bad you can't.

Are you saying that all transistors in the same lot have the same performance curves? That doesn't seem right to me but I am not an expert. I would purchase two sets of matched 2879s and one 2290. I replaced all the transistors in a TX 667v that had the same configuration. You need matched pairs for each push-pull pair.

John

Bo Knows wrote:

Don't use a magnet mount with an amp. you will cook the paint under it if you do. Most magnet antennas will get very hot when hooked to an amp.

In article <VA.0000006c.03e9b580@xor.ccxx>, XXtom@xor.ccXX says...

1. I just had my cobra 18 wxst fixed and supposedly tuned at my local cb shop and the borrowed swr/power meter I was using showed only 2 watts on channel 17 and then about 6 watts on channels 1-4. What is going on there?
2. I have now purchased my own swr/power meter and I don't have a 2 or 3 foot piece of coax to use to go between the radio and the meter but I have a piece that is 8 foot will that work instead of the other?
3 I am thinking of uprading to an export radio and an amp any suggestions for these pieces to get the most bang for my buck?

Thank you in advance for putting up with my newbie questions.

I think you are mistaken about this statement, it is far more important that each 2 pill section be equal or you will have an imbalance, the way these types of amplifiers are biased it is not that critical that the transistor be perfectly matched, the way these amps are driven is way beyond linearity. This is not book theory, this is discovered through personal experience, I have seen transistors with major gain differences work fine with the amount of drive these amps are given. I have overdriven mismatched transistors, and overvolted them at the same time and never had any problems with them, of course a matched set will work better, but when you overdrive a RF transistor any difference in the mismatched transistors will be made up for. I can almost guarantee this guy that if he puts new 2SC2879's from the same lot, he will not have any problems.

> side ? What is legal ?

The stations you're hearing are probably not legal. 4 watts transmitter output on AM, 12 watts PEP on SSB, are the legal limits in the USA. However, many stations violate these limits. (the highest power the government has ever caught anyone using was 25,000 watts, but most are using a lot less!) Also, it is technically illegal for an American CB station to communicate with another station more than 150 miles (about 250km) distant. There is a theoretical height limit for CB antennas (6m above a building, or 18m above ground) but I don't know of any CB stations that come close to violating that limit.

American police probably won't bother you for running more than 4 watts or talking to Europe, unless your transmissions are causing interference to other services. (like TVs and telephones) Selling high-powered amplifiers to CBers, however, may get you in serious trouble.

All that said, it certainly is possible for a legal 4-watt station to get across the Atlantic with a pretty good signal. I have legally communicated with dozens of low-power (less than 5 watts) European and Asian stations on the nearby 28MHz ham radio band.

.....I think maybe you did....
200A X 12V = 2400 Watts
2400 Watts / 746 watts per Hp = 3.2 Hp

20 Hp seems a bit high, even considering any losses.
Even a 6200 watt generator only requires a 10 Hp Briggs & Stratton.

You don't get it. "Amateur" radio is already dead, it died a long
time ago. When the FCC came along and started to tell you what
"modes" and frequencies you could use, along with how
much power you can run...it really became something
that would never interest me.

I really couldn't care less about HAM radio.

This radio is almost a Cobra 146. It is also similar in design
to a Uniden PC-122 or TRC-465.

> Dave

Your guess is as good as mine. BTW nothing was taken for a ham band. The
old 5 meter band at 56 MHz was slid down to 50. Channel 1 would have been
44-50. The old amateur 2 1/2 meter band was moved from 112 to 144 MHz so
that area could become international aircraft.

I think the best guess was that the issue got hung up and your manufacturer
had money to make.

Dick

5459. Re: What are "A" channels?

I should have mentioned that the original argument involved why CB ended with 40 channels. Seems there was some fear at the time that the receiver oscillators (455 khz above tune freq) would either cause interference to a channel 450 or 460 above it or that two stations that far apart would cause interference to any receiver with a 455 if.

In a similar situation, the receiver tuned to Channel 1 would be at the sound carrier of Channel 4.

Then you'd support Joe and Charlie running 50 KW on the ambulance
freq's when it's hauling you to the hospital? Or the FAA freq's when
you're onboard an airliner at 35,000 feet. Or the Fire / Police freq's
when you're having an emergency ? etc etc ...

I don't think you've applied much thought to this matter.

How on earth can you suugest a 2950!!?? There
are more rumors/negative facts about that radio
then all the other put together. RCI quality
control is non-existent. Also, let me correct
you, the 2950 IS made for CB...it is just well
disguised as a 10 meter radio. Heck, swap a
couple wires in the thing and it will change the
frequncy display to a channel readout for CB.
Terrible SSB quality as well.

If you are looking for a VERY dependable and
great sounding rig for SSB, the 2510/lincoln
series radios are by far the way to go, unless
you want to spend the money on a Kenwood.

Be ready to play with a lot of caps to get the right sound. Electrolytics have some really loose tolerances. Their actual capacitance may be two or three times what is stamped on them.

They aren't ground planes, they are capacity hats. They were origionally designed as an aid to mirror mounted antennas on simis that don't have enough capacitance to ground to make them resonate. The lack of a decent ground plane on a simi causes the antenna to be electrically short. The addition of the "ground plane" makes it "longer".

Well..... I don't. I do what pleases *ME*. If I'm happy doing one
activity, then that is what I do. If someone else is better at it, well
good for them. I like to better myself for my satisfaction, not merely
to "look good" to other people. Only people with low self esteem need
the support of other people to feel good about themselves..

You noticed that too? It actually worse than that. When the price of crude goes UP, the increase at the pump is almost immediate. Yet when the price of crude goes DOWN, we wait for several weeks to see it at the pump. Who do these oil companies think they are foolin'?

I have a Brand-New, in-the-box, Leece/Neville 130A alternator for sale.

.HERE"S THE DEAL:

.....#1)--$125.00--- I will pay for shipping, and insurance.., If YOU prepay with a postal money order, or a cashier's check....

.....#2)--$150.00--- Shipping and insurance will be paid by YOU (it is included in this price)., and I will ship it C.O.D..... But...., if I ship it and you refuse, I WILL flame your name endlessly in this newsgroup.....

Thanks for reading, E Mail for more information.

Starduster making that much RFI? Either I have got the worst I-max or the better starduster. In the never ending search for bettering one's self, I replaced my starduster with the I-max, it is already for sale. This thing makes so much RFI it is almost funny. I had a guy all the way across town tell me I was coming in at least 20 over 9 on all 120 of his channels, I assumed he was full of it, so I had one of my friends talk on it while I got mobile, I checked it out on my 2950, and he wasn't kidding, this thing is filthy. VSWR is great (as good as my starduster). I think if you have neighbors and you want to talk,(and don't have room for a directional) a Starduster is an excellent choice. In my opinion, a far better choice than Solarcon. I also should note it's wind survivability, better than fibeglass, neighbor's antron snapped at the top and the Starduster never moved. I worked so many stations on the starduster I can't help but love them, now I have a nasty neighbor-pisser-offer. So I can't work ANY stations. The starduster beats the IMAX hands down, (and yes, I do have filters, and grounding out the wazoo).

They have been informed, and hey peekaboo, I wouldn't worry about the 10 ohm smoke, start looking for the 60 amp smoke under their hoods. I have seen the result of dual fused lines. Not cool.

.....I'm well aware of what a 'capacitance hat' is and it's intended function... the ones the previous poster had seen, as well as several I've seen, were mounted BELOW the coil in the antennas... in the case of the few I've seen, base-loaded coils. The local K-40 outlet DOES indeed sell them as 'radial kits', supposedly tuned for 11 meters. I've seen some decent 'capacitance hats' that are little more than a circle of wire (..think I've seen 'em called 'Halos') attached near the top of an antenna (above the coil)... very effective and FAR less wind resistance.

My 2950 continually out performs any of the other radio's of that type that I've owned,this includes President Jackson's,Sommerkamp's,Super Star's,and the latest peice of JUNK,a Galaxy 99V,now that is the most overrated non 10 meter,peice of am talking cb crap,thats been built yet,it neither powers up nor does it perform at any level to even compare to the 2950,maybe they should have worryed more about building a talker rather than the insipid noise toys,not real popular for ssb use in either band,my best friend has a Lincoln,both of my 2950's have had less problems and are a hell of a lot more stable freq, wise than the Lincoln,but once again maybe I ,just like my dealing with Copper, have been lucky,73's

I see linears advertised in the 80 - 120 watt class that they claim will
run on a 10amp circuit. My cig lighter is a 15 amp circuit. Are you saying
these won't work?

Even my K40?? Hadn't thought about paint cooking. So, maybe a clip on with a center load would work? It's going on my SUV and there aren't too many alternatives. Not willing to commit to a permanent mount yet.

A better choice would be metal oxides. Metal films do have some
inductance that might add up and cause problems.

No,
this is not correct, The length of coaxial does affect the reading. You will obtain the best and more accurate reading with a 3 foot jumper between the radio and meter.
The reason for the difference in the wattage reading is because if your SWR is high on the higher channels or lower channels is because the higher SWR means that less power is being put out to the antenna and staying in the radio as heat. best to get a good 1.5 SWR reading through-out the entire 40 channels.
I hope this helps you...

And you prove my point exactly. Still running
the same old modes, having the same old problems
that have always existed. Nobody in the
hobby makes advancements anymore. The
FCC makes rules to prevent problems, instead
of somebody coming up with modern ways
to deal with them.

Bob.

Hi;, wondering if anyone on the group might
have some ft243 type xtals for 80meters?
freqs wanted are anywhere between 3.5mc to 3.750mc's.
Need a handfull for an old johnson adventurer I picked up.
been great on 40, but would like to get on 80 with it.
Have spare 40's to trade or will purchase what you might have.
Many thanks. Jim kw3u in Pike co. Pa.

hi there,

for me it's impossible to make a QSO with the Stations from StateSide
because my working condition very poor -a President LINCOLN with 30Watts out
but a very bad antenna...my longest distant QSO was Spain : (
i can copy many Signals from Dallas to Philadelphia down to New Orleans on
27MHz - AM there are a lot of Mobiles, and no joke the Signals between
3p.m. -8p.m. are 5/9+20-30db!!! What are the working conditions from your
side ? What is legal ?
Okay best regards from the westside of Berlin called SPANDAU ...

!!!sorry for my English!!!

&Landshark or Landhai

And besides that, they were WAY overpriced . They weren't ven very
rugged in my opinion. A little bit of wind would break the little
plastic holder/spreader on the bottom radials, and I also replaced
lots of them broken at other places, especially at the top center.

At the time, my $20.00 Lafayette Groundplane would out-talk anyone
with a starduster any day. As I recall in the '70's the Stardusters
were $40-50.

Are there any good shops in the Denver area to buy CB stuff?

I'm not worried about radio tech work (I send all my stuff to
Bill Good in Southern California).

I need to buy another Wilson 5000 roof mount and need a new
mic. I would like to find a local shop first.

In Southern California I used to go to Halcon Electronics.
They had GREAT prices on stuff. I wouldn't let them work
on my radios though...ONLY BILL!

You can make a simple dipole out of coax.... 9' per leg is all you need! A friend had one pinned on her wall and it worked GREAT!

Take a piece of coax and strip 9' of the insulation off (use a razor blade to split the outer jacket. Next pull the center conductor out of the shielding. Take the shielding in one direction and the center conductor in the other. Yes you will have horizontal polarization if you mount it like a "T", but it will work GREAT (too.)

Actually, this was a BUG from the factory and Browning was not
happy with it! When they finally got it fixed, the CB public
screamed and wanted it back! They put it back...

Now you know the REST of the story....

You need to have the two transistors in the push-pull configuration to have equal gain for the circuit to work. That is not as important when the output of each push-pull pair is combined at the output transformer.

-=PEAKABOO=- wrote:

The 2970 is a good box. I have had two 2950s and now own a 2970. But, the HP I believe is a totally different radio. You need to find out if it has the surface mount system board. If so it is a superior system with great improvements on the receive side. But you can't do much to modify it. The radio with the new surface mount system board can be modified though for the CB band quite easily I am told :-)

Yes, it was a half wave antenna. Yes, it was a dipole.
The radials were sloped to give a 50 ohm impeadence at
the feedpoint. Yes, it was center fed.

I took a Francis Amazer 3/4 wave (gray) antenna and built
a coupler for the original Starduster. It worked good.

Yes, the antenna was famous for bleeding into everything.

The BEST antenna I ever owned was the Sigma 5/8. It was
better than my Sigma IV!

The formula is a simple electrical equation... figure in about 10-20% in losses as normal.... still gets nowhere near 20hp as you claimed. Do the same equation with 15 volts plugged in.. answer won't change THAT much.

o Iridium Shuts Down Service; Will Destroy Satellites

Washington, DC -- After a year of trying to pull itself out of bankruptcy, satellite telephone provider Iridium cut off its service on Friday evening. "I am deeply saddened by this outcome," said Iridium COO Randy Brouckman. Today, there were reports of a number of possible buyers of Iridium's network, however, none of them appeared credible. Reuters reported that DC-based Iridium, which declared bankruptcy last year, "entered the history books on Saturday as one of the costliest corporate fiascoes of all time." It is estimated that the company spent between $5 billion and $7 billion to build its satellite network. Iridium will now start the process of removing its 66 satellites from orbit. Iridium will signal the satellites to come back to earth; they will burn up as they enter the atmosphere.

Just wondering if anyone has any further info on the following...

So far, I understand that :
The original 23 channels fitted around the model freqs 3A, 7A,
11A, 15A, 19A and the next channel 50kHz higher 27.245 (22B).
27.235 (22A) was skipped because it was used for something else.
When the rest of the 40 were added in 1977 it was decided 22A
and 22B could now be used for CB (24 and 25) as well as
continuing on from 27.265 to 27.405 (with the happy coincidence
that the first two decimals matched the channel number there).

Any further info, folks?
Thanks,
MegHz

Do a loop ohms read out. I bet you will see 1.5 to 2 Ohm
resistance. At 120 watts that's one to two volt drop at the
amp. It may not seem much but that is about 24 watts missing
in round figures.
Cheers,
John

22A and 22B were Business Band channels that were reclaimed by the FCC for
the expansion to 40 channels . They were not part of the Radio Control "A"
channels. Some of the older Lafayette radios actually had the 22A and 22B
channels activated on the channel selector waferswitch, and some of the
earlier crystal synthesized radios could have them "activated" by removing
the mechanical lockout that would switch this crystal combination in.

Message-ID: <329ad584.9802f39d@usw-ex0102-016.remarq.com>
Source record: 28092

Thanks for that!
I was going by the following...

26.995 Models "Brown"
27.045 "Red"
27.095 "Orange"
27.145 "Yellow"
27.195 "Green"
27.245 "Blue"

So did the "Blue" channel follow afterwards, for some reason,
or is it Europe specific, or what?!!

Thanks,
MegHz

5577. Visit my Raytheon CB web site!

Newsgroup: rec.radio.cb
Date: 2000-03-21 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <lcLB4.34$O44.2884@dfw-service2.ext.raytheon.com>
Source record: 28096

Visit my on-line tribute to Raytheon CB radio equipment:

http://www.qsl.net/k5dh/raytheon.html

This site is in its infancy at the moment, but I have big
hopes for making it a first-rate site some day.

Do you have any Raytheon CB radios, mics, or parts rigs
that you want to part with? I'd like to hear about them.
Do you have Raytheon sets that you don't want to sell?
Would you consider shooting photographs of them and then
sending them to me? I'd like to scan them and add them
to the web site. I will give you the photo credit.

Do you have any owner's manuals, service or repair manuals,
sales literature or brochures, magazine ads, product reviews,
or other printed matter pertaining to Raytheon CB equipment?
If so, I'd like to get a copy of your information so I can
scan it and post it to the web site. You will be given credit
for anything that you submit!

73,
Dean, K5DH

You touched on the reason for the complaints about 2950s. The older
versions did drift badly, but the newer model is much more stable. My
controls still act funny if its too hot or cold in the truck, though.

You didn't take into account any electrical or mechanical losses in you calculation.

Horsepower is commonly called out in kW\ outside of the US.

> that the first two decimals matched the channel number there).

If you want to see a channel # vs freq mess, look at Marine VHF. CB is not unique by any means.

I take you back to about 1955. The FCC has problems out the waz. Among them are these:

a. the 11 meter ham band (not a treaty band like most) 26.96-27.23, is a wasteland. Empty, baby, empty.

b. Model Control at 27.255 is inadequate and shared with all sorts of paging, etc.

c. The business band freqs up to 28 are not generally occupied. E-skip not to mention rising sunspot activity (the all-time high was 1958) made them garbage frequencies for commercial use.

d. There is a lot of pressure on VHF FM business and public service freqs. The 27 MHz issues are sideshows really. One of the upshots was the splitting of the VHF channels and requiring 5kHz deviation FM rather than 15, making more channels available and releasing tons of surplus gear on the ham market. Guess what, repeaters.

So the FCC assigned 27 to some low-level staffers for sorting out. The basic idea was to use it on a shared basis for businesses that did not need the capability or the expense of VHF FM. Garbage users meet garbage frequencies so to speak. The original idea was to extend the concept thru the entire 27 MHz region but existing business users and some military trash needed to be moved out. So we get Phase 1, use the ham band and the old RC freq solving the modelers concerns as well by creating what became known as the A channels. On 1 Sept 1958, 23 channel CB was born using the freqs that were readily available and creating the channel anomaly that seems to disturb Meg. Getting something going was the big idea at FCC.

When Phase 2 came in, expansion was stopped at 40 to prevent receiver radiation from the local oscillators (455 above tuned freq) from creating inter-channel interference. This is a non-issue today because international regs and good engineering have generally reduced receiver radiation from a dull roar to a gentle, ladylike belch. It was most likely a non-issue then.

Then comes the gas crunch in the 70s and CB turns into outlaw heaven, the FCC loses interest, RC moves into the 72-76 international reservation, and cheaper radios make business usage a different proposition. The rest as they say is history.

To give you an idea of just how low-level the staffers were, the original CB callsigns used the FCC engineering office numbers followed by a W and four numbers. As the Omaha area was served by the 17th District out of Kansas City, we had 17W0908. It was ultimately pointed out by the ITU that these are not US allocations and we changed them posthaste. It is apparent that the project did not get a lot of review at the top. Garbage staffers meet garbage users on garbage frequencies.

Don't make mountains out of molehills, Meg. The channel anomaly was not a major conspiracy, just your government in action.

Dick

Did I say it was a conspiracy, or it disturbed me? What the
hell is wrong with you? I only wanted an answer to something
that seemed a little strange. Wow.

Thanks for the info though. Marine VHF is quite a simple
interleaving of new channels between old - not a problem.

Mike asked:
>
> What is the moral basis for Congress to force any person to set aside a
> specific portion of his earnings for retirement, whether it's Social
> Security or in a private account?

Because our society does not -generally- allow even foolish
old people to starve to death, those who do not save become
wards of the state in their old age, draining resources
and tax dollars from the workers who do save.
This is the moral basis for an enforced savings account.
Social Security is immorally administered and hideously corrupt,
but that's beside the point. The same logic covers things like
helmet and seat belt laws- people who refuse to wear helmets and/or
seat belts become medical welfare cases, wasting tax dollars
and increasing insurance premiums for those of us
who value our brains over our gonads.
I'm a Republican and a believer in smaller government,
but human nature must be accepted. These laws make sense.

Kind Regards,
D.S.

Source record: 28215

Ok then, how's this looking? Anything further to add?

pre-1958 : USA Ham band at 26.96-27.23 very underused, and there
was little business/military use up to 28MHz. Model control on
27.255 was inadequate and shared with all sorts of paging.

1st Sept 1958 : CB starts, on 23 new channels fitted around 5
new model channels later known as 3A, 7A, 11A, 15A and 19A.
There was also a two-channel gap between 22 and 23 - those
channels (22A and 22B) were Business Band channels that couldn't
yet be cleared.

1977 : more CB channels added - there had been plans for 99
channels up to 27.995 but it was decided not to allow a span of
more than 440kHz - to prevent intermod breakthrough to any 455kHz
receiver Intermediate Frequency stages. The new channels (24
onwards) filled in the reclaimed gap between 22 and 23, and then
continued up to 27.405 to make 40 channels in all.
The five model freqs (50kHz apart) are now part of an allocation
up to 27.28 with channel 25 now being "Blue" (27.245) and
channel 02 now "Black", amongst other interleaved channels.

Thanks,
MegHz

> I'm a Republican and a believer in smaller government,
> but human nature must be accepted. These laws make sense.

The key phrase: 'but human nature must be accepted."

Human nature is the one thing over which humans have control. We have choice, free will and the ability to decide to take responsibility for our own individual actions. That we generally do not, in this country, has been a function of the political wind. Which has in turn encouraged us to further abrogate responsibility.

The thinking that human nature makes laws mandating human behaviour necessary is contrary to the very concept of freedom. It presupposes that humans cannot accept responsibility for their action. It presupposes that the government MUST prescribe,and proscribe specific behaviours for the protection of individuals who cannot protect themselves. That thinking is flawed. The presumption is false. More insidiously, it presupposes that the bad feelings of tragedy can be avoided by restricting freedoms and choices, which is also false.

And tragically, by buying into the idea that any laws restricting freedoms are necessary, you support the thinking that's current in Washington that more laws will offer a better quality of life. And THAT's the big lie.

>
>Horsepower is commonly called out in kW\ outside of the US.

...So..... What's your point?
2400 Watts (12V X 200A) = 2.4 kW.....or as you would have us believe.....
2.4 horsepower (in YOUR 'outside the US' measurement, LESS than the 3.2 hp I
calculated)... still a LONG ways from the previously stated 20 horsepower.
Would you have us believe that alternators operate at 10-15% efficiency?
(70-85% and better is common)

As to measurements, an inch in Monaco is an inch here, just as a meter here
equals a meter in France. 1hp=746W.... anywhere in the world.
W(dc)=VxA... also, anywhere in the world.

Thank you for your thoughts, Peter, but I cannot agree with
your utopian assessment. We cannot base our actions on
what people *should* be, or *could* be, or *ought* to be.
We must deal with them as they *ARE.*

Many people _WILL NOT_ accept their personal responsibility
to the whole of society. These people cost the rest of us dearly.
Our culture shows no signs of changing back into one which
teaches and demands personal responsibility.
Unless and until society accepts means to weed these individuals
out of the stream, laws forcing compliance on all
are the only effective answer.

Perhaps I'm really a fascist without the racist overtones, Peter.
True freedom is impossible without personal responsibility,
and most people prefer to blame anyone and anything for
their lives, other then themselves. They mouth about
their freedoms, but in the end they actually want someone
else to tell them what to think and do.

Let us hope that, in the end, you are right and I am wrong.

Kind regards,
Dave S.

> are the only effective answer.
>
While you're right, that many people will not accept
responisibility,
that we simply abrogate the responsibility of the society to
protect
itself is not my point. Society has for the last two generations
entrenched in its citizenry that anything that was not
specifically
proscribed by law, was not only right, but virtually mandatory.
The
result is that laws have become necessary to enforce compliance
with
simple social courtesies, not to mention more significant
considerations.
The problem, ironically, is that in our efforts to become more
socially aware, and
sensitive to the needs of the individual, we abrogated our
responsibility
to teach, train, and encourage responsibility among our youth.
Once adults,

there is literally no way to get them to accept responsibility.
Not even
the pain of legal punishment. Even the law has no teeth to those
who do
not respect it. OJ Simpson but a single example.

Perhaps we've gone too far to recover. But we may, by being
less permissive and bringing back responsibility, eventually
obviate the need
for many of the intrusive laws that we now find ourselves saddled
with. Not that any laws are likely to be repealed. But laws or
not, we must return to personal responsibility if we are to move
forward as a civilization.

> Perhaps I'm really a fascist without the racist overtones, Peter.

wrote:

> These people cost the rest of us dearly.

Actually, in most cases they don't. Smokers use less of the
health care system because they live shorter lives. In fact,
it's a total myth that smoking costs society anything. Hell, if
it weren't for smokers and the taxes they pay government would
probably come to a halt. (Well, not, but you get the idea.)

For every motorcyclist who costs "society" millions as a
vegetable from a crash without a helmet there are probably 10
cyclists who died from the crash without a helmet and cost very
little.

You have to look at the total effect and apply some risk
analysis. What happens if the person lives to age 75? What
happens if he dies early? Few people these days take the trouble
to look at the big picture. They look at Forest X and assume
that because 1/2 the trees are dying, that 1/2 of all trees are
dying.

The original poster asked two questions. Where to put his SWR meter and what length jumper he needed. Where to put the SWR meter had been adequately answered . I assumed the jumper meant the jumper between the radio and amp and he needed to know what was the best length for this. He has 2 options Fiddle with the length for best drive or put a tunner between the amp and radio and adjust it for best drive.
Form Bo's commits either Bo don't know, Bo can't read or Bo is a jerk. More than one assumption may apply.

I would like to sell this radio as I have no use for it any more.
it was only used a very short time never for more than 30 minutes
it is a strong radio and has great range.
I have the box and manual for it as well as all the mounting hardware

details on the unit can be found here
http://www.rciweb.cadic.com/

I might also include a Penetrator HB150 amp as well

Because amatuer radio is used to communicate with people all around the globle who don't speak the same language....
It is also a privelage to have a ham license just likeyour drivers license is a privelage...I am sure there are many driving laws you don't like either....

Sounds like amateur radio policy to me, Peter. If God knows exactly
what people will be freebanding on 10m next week, those guys have
no choice. If they chose to be good guys and not freeband, then God
would be wrong and we know God will not allow Himself to be wrong
so He forces those nasty freebanders to freeband against their will.
That's the problem with an omnipotent God. He doesn't have to be
omniscient if He's omnipotent. He just abuses his power so He will
never be wrong.

Hello Mike: This is a tought one to answer. What is the antennas SWR on the CB band? What is the antennas length, Does it have ground radials, and what length?

The Military probably spec'ed this antenna as a broad band antenna for use in the 30 to 75 MHz band. It may work on the CB band. But then again it may not. Again whats the SWR on the CB band?

But it should be a great low band VHF scanner antenna.

Jay in the Mojave

No you are right, but if you use a large pulley you would need more engine RPM's to achieve full output from the alt, the engine seems to take the load of the alt better at higher RPM's, HP rating of a motor is usually higher at higher RPM's meaning it would put less of a load on a motor with a larger pulley. The alternator only needs to turn so fast to achieve to achieve full output, so the easier it is for the motor to turn it the better.

Message-ID: <38D82CCB.825A2D7A@hotmail.com>
Source record: 28277

On many radios the noise blanker works in an interesting way. Inside the radio there is actually a second receiver that is -listening- on about 23MHz. There is nothing on 23MHz (or there isn't supposed to be) it is merely listening for noise. It takes this noise signal and super-imposes it on the desired signal (around 27MHz) but inverts it first. The net result is it blanks out the noise on the desired signal. This is because impulse type noise is spread across a large frequency range. However, I think you can see that if a signal did appear on 23MHz that it would be flipped upside down on the legitimate signal. In a case like this, the noise blanker would actually increase the noise and not reduce it. This -could- be what is happening.

MC

5660. How did they catch this outlaw??

Newsgroup: rec.radio.cb
Date: 2000-03-22 00:00:00 UTC
From: N9NWO <N9NWO@AMSAT.org>
Message-ID: <csWB4.1220$A.226266@dfiatx1-snr1.gtei.net>
Source record: 28279

Given that there are millions of outlaw CBers, how did they
go about catching this one? It almost looks like they were
waiting for him.

ENFORCEMENT: EX-HAM FACES $17000 FINE FOR FREELANCING

The FCC has levied a $17,000 fine against a former Texas ham whom the agency says it caught FREELANCING. This as it notifies Leonard Martin, the ex-KC5WHN, of Houston that he is the target of the monetary forfeiture.

You may remember that back in July of 1999 that Martin was monitored and T-hunted by the FCC. This lead to proof that Martin was causing interference on the 20 meter band. This operation was also out of band for his then Technician class ticket. After a conversation with the FCC's Riley Hollingsworth, Martin turned in his ham radio ticket for cancellation on July 23rd. At that point all enforcement proceedings against Martin were terminated.

Last October Martin was again caught by the FCC. This time operating in the so-called Freeboard spectrum that lies between the top end of 11 meter CB and the start of the 10 meter Amateur allocation. FCC engineers attempted a station inspection but Martin denied them access. These allegations have lead to the FCC issuing the $17,000 fine to Martin. The FCC's Riley Hollingsworth says that the level of this forfeiture should show that the FCC means business when it says that no violations will be tolerated:

Hollingsworth here:

Martin was given the usual thirty days to pay the fine or to file an appeal.

(FCC, Newsline, RAIN)

ENFORCEMENT: MORE ON THE TAMPA PARTY PIRATE

The FCC has also levied a $10,000 fine against Leslie D. Brewer's 2-Way Radio in Tampa Florida. This for allegedly selling an unauthorized, fully assembled twenty watt FM broadcast transmitter to an FCC agent posing as a customer.

The Commission says that Brewer, who holds the Amateur call letters KC4HAZ, also calls himself the Tampa Party Pirate. The FCC also says that Brewer has been involved in the operation of an unlicensed FM station on 102.1 MHz, in the Tampa, Florida area.

This past fall, there were ssb signals coming onto AM on 27.350 so loud at 7:50AM to 8:15 AM eastern time most every morning so loud and clear from overseas, that you couldn't make out anyone on a base station on 27.325 on AM. I would be in my mobile on 27.325 and the bleedover would devastate anyone not really close by. It appeared to be France but the language was too distorted to tell exactly what it was.. After that time period, it would just go away....

5662. Sigma 4

Newsgroup: rec.radio.cb
Date: 2000-03-22 00:00:00 UTC
From: "David P." <L65diesel@ev1.net>
Message-ID: <c8XB4.769$Og6.175175@tw12.nn.bcandid.com>
Source record: 28281

I bought a Halcon Sigma 4 base antenna. It has 4 radials, and the paperwork says it is 3/4 wave. Anyone know what the length is for the radials? The way the antenna is made, the total length for the radials can be adjusted; the paperwork only says that the top section of radial should be 90 centimemters.

The radials are in 2 pieces. The first piece ends at the plastic support, then the 2nd piece starts. The 2nd is smaller in diamater and can slip down into the first piece. With the top section of radial adjusted to 90 centimeters, the total radial length is about 7 feet. A local guy says that the radials should measure between 8 and 9 feet. Anyone have any idea??

BTW, I have adjusted the total antenna length to 31 feet.

thanks,
Dave

To rec.radio.cb:

N9NWO cross-posted this to several newsgroups. It is likely that he will never see responses posted here.

N9NWO has been sent a request that he confine his Amateur Radio posts to the appropriate ham NG.

If it continues, he will get the famous,"Check your license at the door when you come to CB" message.

Please accept this as an example of poor NG manners. I am sure that he and N5PZJ did not intend this as an attack upon the 11 Meter crowd.

73,
QRM

Actually it was aimed at the alt.law-enforcement and
misc.survival NGs. The pro drug crowd hasn't thought
that the federal government would go after people like
CBers. My point is that the laws are now being enforced
on many fronts.

Except for gun laws which Clinton seems to think
are unimportant.

I would estimate 5HP... and most alternator outputs are rated at 2000RPM...
which usually equates to 1000RPM engine speed due to the 2:1 ratio pulley
from crankshaft to alternator.

The maching has to due mostly with DC beta (current gain) of the
transistors. Having matched transistors help in biasing. They also try to
match power output of the devices after the intial beta screening is done to
equalize amplifier output in push-pull configurations...

From ARRL web site:
QUOTE

The FCC has told a former Houston, Texas, amateur that he's liable for a $17,000 fine for unlicensed operation and for failing to allow the FCC to inspect his radio equipment. A Notice of Apparent Liability for Forfeiture--an NAL--was sent March 3 to Leonard D. Martin, formerly KC5WHN, by the FCC's Houston Office.

Martin has bumped heads with the FCC on several occasions. The FCC said it received a written complaint in May 1998 alleging that a station identifying as KC5WHN was operating on frequencies not authorized by his Technician ticket. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth sent Martin a Warning Notice in November 1998 outlining the complaints. The Commission said Martin "generally denied the unauthorized operation."

After tracking transmissions on various 27 MHz frequencies to Martin's residence on at least two occasions in early 1999, an FCC agent was twice rebuffed in his efforts to inspect Martin's radio equipment. The FCC's Houston Office issued Martin an Official Notice of Violation last April. Martin acknowledged the complaint and promised that "no further action by the Commission" would be necessary. In July, he turned in his Amateur Radio license for cancellation.

Martin's troubles didn't end there, however. Last October, following up on complaints of RF interference to a telephone in Martin's neighborhood, the FCC again tracked 27 MHz transmissions to Martin's residence. Martin reportedly again refused to let the FCC inspect his equipment.

The FCC NAL said that, based on the evidence, Martin "repeatedly and willfully" violated Section 301 of the Communications Act by operating without an FCC license and by refusing to allow an FCC inspection of his radio station. Martin has 30 days to pay or to request reduction or cancellation of the proposed forfeiture.

Makes you wonder if the radios were used per the manual on loading , and not turning the carrier too high on AM . My old FT-101B still has the orginal NEC tubes and l think l had it on AM once and its still running strong , making contacts to the UK just today , with a 5/8 ground plane antenna . Great conditions these days . All DXERS enjoy before its all gone . By that time l hope to have my ham license and enjoy DX every day , take care .

Heck, you know how rabid some HAMs can be. The amateur users probably ended up doing all the "footwork" and the FCC came in to do the prosecution. In certain parts of Indiana, some groups are more than willing to do a foxhunt if they know someone is screwing around out-of-band, as it appears this guy was doing.

Plus, he might have p.o.'d someone with some clout if he was doing his own programming. Nothing is said about the content of his illegal station.

Hey, the FCC has to justify it's money SOMEHOW.

Looks good to me. You apparently know more about the RC channels than I do
as this was not my schtick. Hard to know much less.

Dick

OTOH, I CANNOT RULE PAPA BUDE OUT FOR THE FOLLOWING REASON:

Header references in post 1 < inflammatory >
References: <csWB4.1220$A.226266@dfiatx1-snr1.gtei.net>

Similar Header references in post 2 < example/control post >
mhRt4.116$oO6.3408@dfiatx1-snr1.gtei.net
5zXt4.1400$oO6.15706@dfiatx1-snr1.gtei.net

THESE are the *common links* between the two messages:
@dfiatx1-snr1.gtei.net

I say there is the *possibility* that budge _could_ be considered a candidate for the Line-Up.

The radio is three months old, still in the box. I got it for Xmas and never used it. It's been converted for the 5 freebands and the seperate 10 meter band. Will let it go for $125. If you have any questions feel free to e-mail me. I'm giving the NG users first crack at this before putting it on eBay. Thanks.

I'm not sure how to read this path but it looks like it was routed through
Maxwell Hall at Syracuse University at one point. Story on the news a few
weeks ago that their system had been hacked.

Hi Jan,

I just returned from

http://www.abortiontv.com/

and have made myself sick to the stomach enough to ensure a nice night full of nightmares. I can't imagine any HUMAN visiting this website, viewing the graphics and videos, reading the text, and continuing to *argue* that a fetus is only a *tissue mass.*

I will be screeming in my sleep again tonight; the other night it got so bad I found my wife sleeping on the sofa in the morning :(

Now to this Syracuse U path. Yes, it is _common_ for a lot of posts to get routed through this server. I have software that tells me how many *hops* it is between my computer and the one I am gleaning information from; typically runs anywhere from 10 to 13. Syracuse usually shows up as one of the routers.

That's not much of an indication of anything, im_h_o. Doesn't tell us much.

Anyhows, there's always the trashbin (spam filter). Lets toss these geeks into there with these *tissue masses* and let them writhe in the blood and dismembered body parts. It would be fitting justice.

I don't know how you feel about genocide. But since the Supreme Court of the United States has condoned it, and legalized it, you can consider me < because of that, and from now on > an Enemy of the State.

So you FBI types out there, go to the above URL, peruse the _entire_ site, and then come back here and tell me how great this Nation is. IMO, it's no better than Nazi Germany was in 1942.

Oh, why don't I move if I don't like it. BECAUSE this is MY COUNTRY. _YOU_ get the f out. Go to China where your brutality will be welcomed with open arms.

g-damn bastard f'ing rotton scumbags. Take that Supreme Court and stick it where the sun don't shine.

Cordially,

Your Pal,

Lg

Well, you ARE a retard for having posted this on "rec.radio.swap" as well as other groups where this clearly doesn't belong.

You missed the most important point.
They look COOL.

Haven't found a Wilson yet that like things attached to them. Only in very rare occasions. Just like the impedance matchers they attach at the bottom of a silver load. Hooking them up is a rare thing but its done all the time and usually it is the root of a problem. Keep your change in your jeans and wait until a new improved version of some antenna comes out.

My two cents worth.

"Freeboard"? The portion from 27.410 to 28.000 MHz is called the "Free BAND."

Haven't you figured it out. The FCC probably records 27.555 around the clock.
Here in Southern California, there's MILES of recordings (on magnetic tape) of
the more infamous repeaters.

> there is no noise or meter movement, speaker is ok. thanks

When you take an old working radio (the 449 is over a 20 year old model)
and store it for a time, and then it no longer works, suspect dried out
capacitors. I have seen many instances where small electrolytic caps dry
out to the point where they're either very leaky or the open up.

Corrosion on the relay contacts are another possibility. Key it and
unkey it rapidly a few dozen times and see if the problem goes away.

>>Looks good to me

Thank you.

>>You apparently know more about the RC channels than I do as
>>this was not my schtick

Ah well you see... I'm interested in ALL radio systems in ALL
areas of the spectrum, not just Ham Radio! So maybe you can
appreciate how getting onto HF isn't the most urgent priority
for me... there's plenty else out there. But, you can imagine
how (I hope) given that I can do international things on 50MHz
it seems totally absurd that I cannot do those same things on
28MHz. I may be wasting my time trying to convince anyone who
uses the internet, but it feels like I'm doing something,
however small!

Another few WRCs should do it, anyway :o)

He was operating within the CB "FreeBand" which is a set
of frequencies between 27.405 mHz and 28.000 mHz. In FCC
circles, this is known as their "money in the bank band".
The FCC has know and catalogued for Years the operators
who transmit in this band of frequencies, which is currently
allocated to Govt and Industrial Communications users.
The bulk of Freeband operators are in Mexico, Central and
South America. Spanish speaking "nets" running traffic
between South Florida, Texas and Mexico are very common.
This band was also popular with "pirate taxicab" operators
in NYC, untill they switched over to FRS radios of recent which
are smaller, easier to use and less prone to interference.
Foreign op's are out of the legal jurisdiction of the US Govt
(unless their running drugs then the DEA gets involved) but
casual USA op's are ripe for the picking, and have been so
for a looooong time. Money in the bank you could say.

Just thought i'd post a reply up regarding "The landshark". I saw that you had posted up a response and I said to myself, "Awh great here we go again, but I was wrong. Hopefully everything is QRU and we wont be dropping the mall on each other. 73's. I like messing around also and getting everyone rowdy as well. Thats whats fun about CB. Can't do it on ham though the older crowd don't play that! LOL That's why I get on the Cb. Where else can you relieve stress at? There's nothing like dropping the perverbial mall on a duck. Can you figure out a more fun way to relieve stress? Take it easy and if I were to key down on that Wilson with the ghost, that thing will launch like a bottle rocket! It works great with smaller amps though. catch ya' later.....

DBI??? Why? It's not 'real', it's 'theoretical' only. A 'reference'
dipole can be constructed by almost anybody and easily
compared against.

Mike

Source record: 28335

Actually they did do something.

One was 'mechanical' and the effectiveness could be argued.
It broke the 'resonance' of the antenna so it would start
'flailing' in the wind. I don't know how effective it was, and it
may have been one of these 'theroretical' things with absolutely
no practical gain, but that was one of the arguements.

The other was it DID add some capacitance to the antenna,
making it work a little wider bandwidth. But then, a small structure
at the TOP of the antenna would have done that even better.

Quite simple, The FCC has little white vans driving around looking for 'evil' folks like this, mostly once other HAM's or whoever complain. Any Transmitter can be 'found' using simple triangulation. This guy was stupid, that made it even more simple.

5726. Power Connector wiring code needed

Newsgroup: rec.radio.cb
Date: 2000-03-22 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <8bb86desj1@slb1.atl.mindspring.net>
Source record: 28345

I need a rundown of the connections in the power cable for a Shakespeare 740 Rig. It is an older 40 channel tube rig, similar to the Robyn T-123B, Gemtronixs 2300 and Teaberry Model T. The AC connector is an 8 pin octal male, and I need to get the pin designations for the AC cord. It looks like it routes the filament voltages through the standby switch when powered up, but I would like to confirm this before trying the wrong guess and letting all the smoke out.

Thanks,

David

The "little white van" thing is a CB myth.Why not call the FCC and ask
how they do it,they WILL tell you.They are quite proud of the fixed
facilities as well as the briefcase sise equipment they can take on an
airliner to anywhere then set it up in a rental car.Triangulation works
but is rarely needed on a band with virtually no reflections,especially
when mobile dopplers are employed.

Since all the radio shacks closed theirs out the ARRL is a good
place,check their website.$4.00 a piece plus they have a small "mobile"
version.

Can't tell you how to set up a particular amp but I can tell you the most
often made mistake. There is a tendency to adjust the loading for max power
on a dead key. Bad mistake. If the amp is already putting out all it can
handle on the carrier there will be no room for the modulation peaks.
Essentially the same thing happens to an amp that is overdriven. For an
unknown amp the best thing to have is a good modulation monitor so you can
adjust drive and loading for best output.

5738. Q32 on the 2970

Hello NG here are my 2 questions: 1) Q 32 was removed from my 2970 and I would like to put it back in since my board is pretty old and has seen many mods can someone please tell me the correct placement I have the front of the radio facing me and the radio is upside down. 2) I was told I could put a 1 K resistor in series on the emitter side of the Q32 I am curious I put 1 lead on the emitter side of Q32 where does the other lead go? Thanks in advance!!!!

Old Charlie makes a visit to the doctor; the doctor calls him in to the consulting room and asks him what the problem is. Well its very embarrassing really says Charlie.

You donâ€™t have to be embarrassed cries the doctor I am a professional and you can talk to me without any problem.

OK says Charlie well you know I am getting on in years

Yes says the doctor

Well says Charlie its about my sex life

Carry on says the doctor

Well says Charlie the wife still likes to indulge, however, when I am banging away I-----

Donâ€™t worry Charlie I know what you are trying to say replies the doctor

You do doc

Yes Charlie, you are banging away and you are not touching the sides anymore

Jesus cries Charlie you are spot on.

Donâ€™t worry says the doctor I know the cure, now tell me what beer do you drink
Well replies Charlie I drink Bud
Bud replies the doctor well thatâ€™s the problem, Bud is a light beer and that causes things to shrink and shrivel up in fact if you aint careful it will make your old John Thomas so small you will be unable to piss.
What you must do is drink a dark beer, so from now on you must only drink Guinness. That will make things big strong and HARD. I want you to try this out and then come back and see me in two weeks

Two weeks later Charlie revisits the doctor. The doctor says to Charlie * how is your sex life now Charlie *

F*cking brilliant replies Charlie absolutely f*cking fantastic.

Well did you drink lots and lots of Guinness like I told you to?

Nope says Charlie; I got the wife drinking Bud

Sure LG, that is obviously the intelligent solution. Let's throw out the supreme court....Hey while we are at it, let's get rid of all the courts....Oh yeah, the police too. Hmm, while we are shredding all the things that make this country a free and civilized society, we'll get rid of all the politicians, the presidency, and dissolve the senate. Lord knows the anarchy and chaos that you seem to be preaching will be much better. No one will be able to work because we will have to stay at home and protect our property from roving bands of violent pillagers, and we we could collapse the entire global economy. Yeah, that makes sense, let's destroy the world as we know it because YOU don't agree with a decision from the Supreme Court.

You are what's known in technical terms as a moron. You don't throw out an institution that has helped shaped this, the greatest nation on earth, for over 2 centuries because you disagree with a decision. You use the systems in place to change it.

You couldn't be more wrong. Disagreement with the majority is not grounds for exile. You are laboring under the delusion that the USA is a Democracy. It certainly is not. A lynch mob is a democracy. We are a Republic. This not only requires a government that is (supposed) to be elected and answers to the people but the majority's power is limited by the Constitution. This way, if everyone in America disagrees with, say, Larry Glickman' opinions, he is still welcome to them and, indeed, stand on the street and proclaim his opinion to everyone who will listen. The majority, under the law, can do nothing but argue with him. This way, the minority is protected as well as the majority.

I wouldn't have it any other way.

You need to get some help for the severe emotional disturbance you have. Your violent nature can only serve your own destruction.

Am I a cop? No I am not. I happen to be in the Army. I have dedicated my life defending this country from "All enemies, both foreign and domestic." If you are preaching the violent destruction of the country, guess which one you are?

I hope you end up in jail and pinned to the wall by your roommate Bubba. The justice system we have works very well, and it has systems in place to change laws you don't agree with. Why don't you try it instead of talking about killing innocent people. If oyu are unsuccessful in changing a lwa, it is because the MAJORITY of people don't agree with your OPINION, and therefore, it shouldn't be forced on them. If you want to live in a place where the will of a small number of people can be forced on the entire population, then you shouldn't live in this country. A place like China, or Russia shares your views that the will of a small minority has the God given right to enforce there will on the rest of the country.

These are the same words that England used to threaten the Colonies about
224 years ago. Didn't work then; won't work now.

>
> Am I a cop? No I am not. I happen to be in the Army.

Big fucking deal. All that means is that I PAY YOUR SALARY. I am your
boss. You work for _me_; not the other way around.

> I have
> dedicated my life defending this country from "All enemies, both
> foreign and domestic." If you are preaching the violent
> destruction of the country, guess which one you are?

Put your money where your mouth is, or shut up.

>
> I hope you end up in jail and pinned to the wall by your
> roommate Bubba.

I don't give a good goddamn what you want, or what you think, anymore than I
care about which of your roomates ass you had your dick in last night.

The justice system we have works very well, and
> it has systems in place to change laws you don't agree with.

Right. The justice system works SO WELL that Governor Ryan of the State of
Illinois has just had to shut down Death Row because about 50% of the
inmates killed over the last number of years here were found NOT GUILTY
after going to their graves. Works *real well.* Just ask OJ. He'll tell
you.

Why
> don't you try it instead of talking about killing innocent
> people.

BECAUSE Supreme Asshole, those *innocent people* don't have a VOICE ! What
they do have is a Silent Screem, that can only be visualized on an
ultrasound monitor.

If oyu are unsuccessful in changing a lwa, it is because
> the MAJORITY of people don't agree with your OPINION, and
> therefore, it shouldn't be forced on them.

The innocents depend upon those of us who can be characterized as HUMAN to speak for them. They have no voice of their own. If they _did_, I'm sure the first words out of their mouths would be:
PLEASE DON'T KILL ME !

If you want to live
> in a place where the will of a small number of people can be
> forced on the entire population, then you shouldn't live in this
> country. A place like China, or Russia shares your views that the
> will of a small minority has the God given right to enforce

Precisely because you would LOVE this Jew to leave, is the reason I never will. I will remain a bloody thorn in your bloody smelly ass for as long as I can breath. And even after that. I consider it my Patriotic Duty to drive to and your kind to extinction.

come on over fuckhead, and bring everyone else you need to hide behind while
you do:

I live at

Lawrence Glickman
733 Strieff Lane
Glenwood, Illinois 60425-1313

Now like I said, PUT UP or SHUT UP.

I'm waiting < but not holding my breath >, because I _know_ you are a lying
faggot scumbag who couldn't whack his own willie without using both hands
and some other guys butt.

Now get on with it, or get the fuck off my newsgroup.

My Country, the United States of America, is my birthright, because I was born here. I have the papers to prove it.

That, evidently, is enough to establish my citizenship. NOT what I think; NOT what I do for a living; NOT who I vote for; NOT which politician's ass I kiss.

It is my country. I even own a small part of its real-estate. I have paperwork to document that also. That doesn't mean I have to agree with everything the Overlords proclaim. Or agree with ANYTHING the Overlords proclaim.

I have _personal_title_ to a special piece of real estate in Illinois. And furthermore share the ownership of ALL Federal Properties and structures. I would say, collectively, that makes this _my_ country as much as it does anyone elses.

I am trying to illustrate a point:

The Supreme Court of the United States of America decided, in a decision
called Roe vs. Wade, that women have a right to legal abortion.

Now in one respect, I support this, because in cases where:
a) the birth of the child would threaten the life of the mother, or
b) the birth of the child would result in a deformed (Down's Syndrome
baby), or
c) the baby is the result of a rape, or
d) the baby is the result of incest,
perhaps I will agree for a *medical justification* for terminating the life
of the infant.

_Beyond_That_, it seems to me that abortion in Amerika has become an adjunct
to Birth Control. Planned Parenthood (an organization here) is, imho, a
euphamism for Killing Center.

Murdering millions of children a year. How can anybody become upset over Columbine, which resulted in x number of deaths of kids, and not become upset over the wholesale slaughter of uncounted millions of babies? Easy. Because it is done behind closed doors, where nobody can see the ugly truth.

Now was this Decision of the High Court based upon a referendum? A direct vote of We The People? Like hell it was. In fact, it was not.

I would venture to say that if _everyone_ in the USA had to see what goes on in Abortion Clinics (euphamis for Killing and Extermination Camps), that this *Legal Authority* would be stripped away in a single day.

Except in the cases of medical necessity.

YOUR Newsgroup. I believe this is public domain. Your ego is even larger than your bravado. Since you threatened me, why don't you come here to VA. Let me know when you arrive, I'll meet you at the airport, and then send you home in a body bag little man.

You have serious issues you need to deal with, not the least of which is your aggressiveness. What's the matter? Not hugged enough as a child? Dad in jail? Drugs clouding your mind? Uncle Herman teach you to play doctor, and not let you tell your mom? More than likely it's a comnbination of all four.

Yes. I even see Armyslut's point. We are never going to get a committee to
agree on anything, nevermind an entire Nation.

But, and this is the important part, the decisions of the High Court are not
necessarily the reflection of the *will of the people.*

The decisions in the High Court are not voted on, except by the Justices
themselves. Can you see MY point? Why should anybody have to *swallow*
what comes out of that Den of Iniquity, when the wishes of the people that
have to live with those decisions don't even have any voice in the decision
!?

< rhetorical question; no reply required >

deep subject.

Do you not see this as a problem? Is there a REASON why
people would want to kill you? It couldn't possibly be your
sparkling personality. Think about your attitiude, and then
wonder why so many people would dislike you. I don't dislike
you, I just don't like to be threatened.

By the way, thanks for your address. I have forwarded your name
and address to the FBI, for addition and tracking as a likely
militia member that condones the violent overthrow of the US
government. That van out front, no really, it's just repairing
the phone lines.

You could turn it up to speed with a stationary bicycle if the entire system is all geared correctly, might take an hour to get up to speed, but it could happen. In that case, how many horsepower are YOU?

The original question is like asking: "How many horsepower does it take to travel a 100lb load for 100 miles". Well it depends how fast you want to get there. ;)

Hi Dwight,

I have a new (NOS) one in the box, a used reconditioned (new coax) one
in great shape, and a used one that is complete but needs
reconditioned. Make me a offer on the one of your choice.

Tim

After so many responses to my previous post on Leece Neville alternator load, I thought surely someone would know how much a 200-amp would draw. How can you "big dogs" fine tune your rig if you don't have all the specs?

My question still stands. Does anyone know how much horsepower it takes to RUN a Leece Neville 200-amp alternator under full load, reguardless of the pulley size?

Yup. The only antenna that will measure an open is a simple quarter wave ground plane or any gamma matched beam. The reason this is done is two-fold. It provides a DC path to ground for lightning protection & it will suppress noise caused by static building up on the radiating element. Anyone who has messed with wire antennas, especially real long SWL ones, will probably know about static build-up. Even when a lightning storm is way off in the distance it will induce a voltage in a wire antenna - the longer the wire, the more the charge. Normally this voltage is dissipated by the circuitry in the radio to ground, but a condition can exist where the voltage is rising faster than can be dissipated and then your front end goes poof! And I don't necessarily mean lightning here. A DC grounded antenna, like yours, will bleed off the voltage long before it gets near your radio.

I hope this helps

The old mixer & master crystal synth'd radios used quite a collection of frequencies to work. This left them quite open for interference. The most common reason for this kinda thing happening on scanner radios is caused by -image- frequencies. Basically a radio injects a signal either above or below the first IF stage. If it is below, then the frequency that you're tuned to minus 2x your IF frequency will be receiving too. The front-end tuning circuitry in most CBs is pretty tight and no images can get in. But if they're strong enuf, you're gonna hear 'em. As a general rule-of-thumb, high-side injection (above your operating frequency) is better than low-side. In fact, the higher above the operating frequency usually the better. Some radios use a good high one. I believe the Uniden HR series is one of them.

Regardless of pulley size?

How much effort does it take one to pedal a 12 speed if the gears (pulleys) are changed? By saying regardless of pulley size then the question is vague and the answer incomplete.

Also, you may truly wish to read on the differences of torque and horsepower.

Though for the sake of answering your question, it would take on a 4 to 1 pulley (ratio) setup about 7 horsepower to efficiently turn the alternator to provide constant full load (as in amperage in this sentence).

Simple and cheap. Get yourself a 0-30pF variable capacitor (aka trimmer) and get yourself a SPDT switch (ANL would require more circutry). I am going to try a really crude drawling here. Laugh as you will, but, here goes:

```
---| (----o--\ \---o---|[]|----o
^
|
```

Find the crystal in the radio. Find the leg of the crystal that leads to the EXISTING trimmer. Make a break in the solder trace as indicated above between THIS trimmer and the leg of the crystal. Run two wires from here (one wire on one side of the break and the other on the other side) making them as short as possible (this may mean mounting the SPDT switch directly above the crystal) and hook them up as follows.

```
\
A--------o \o o--------B
C
```

Well, that is more tought to draw than I thought. Okay. Anyway. Hook the wires so that one goes to point C on the switch (or the center pole) and one goes to point B. Then solder the 0-30pF trimmer (the one you have to buy or obtain) from points B to point A. With the switch set to connect poles B and C, adjust the onboard trimmer to set your CB on frequency. Then flip the switch and adjust the "obtained" trimmer for a 10 kc jump (or just about anything you want). Done.

As I said, not the right way to go about it, but it is effective and cheap.

>foreign and domestic." If you are preaching the violent
>destruction of the country, guess which one you are?

You need to grow up and LEARN your American History.

This country, with its institutions, belongs to the people
who inhabit it. Whenever they shall grow weary of the
existing Government, they can exercise their
constitutional right of amending it or their revolutionary
right to dismember or overthrow it.
-Abraham Lincoln
First Inaugural Address
Monday, March 4th, 1861

Holds true today as it did then.
It's a shame he didn't believe what he mouthed.

> I hope you end up in jail and pinned to the wall by your
>roommate Bubba. The justice system we have works very well, and
>it has systems in place to change laws you don't agree with. Why
>don't you try it instead of talking about killing innocent
>people. If oyu are unsuccessful in changing a lwa, it is because
>the MAJORITY of people don't agree with your OPINION, and
>therefore, it shouldn't be forced on them.

Again, grow up. Learn what a Republic is versus a Democracy.
Hint. We are a Republic.

If you want to live
>in a place where the will of a small number of people can be
>forced on the entire population, then you shouldn't live in this
>country. A place like China, or Russia shares your views that the
>will of a small minority has the God given right to enforce
>there will on the rest of the country.

No, here it is SUPPOSED to be that the majority does not run roughshod over the
minority.

pulley size is not the main factor here,it determines how many rpms the
engine/alternators
need to turn for full output. The load the alternator puts on the engine is
how many hp that is required. a simple mathematical calculation.746
watts per Hp so amps x volts = watts .And the insignifigant amount of
horsepower a 200amp would use
the big dogs could care less about.

http://internetjunk.com/users/creamer/

5804. range vs. watts?

Newsgroup: rec.radio.cb
Date: 2000-03-23 00:00:00 UTC
From: mbos@iastate.edu
Message-ID: <8bcbss$s7i$1@news.iastate.edu>
Source record: 28423

Anyone have a rough estimate on what range a 4 watt radio and a 102
inch whip would have in fairly hilly country? How much would the range increase
if I got a 250 watt amp? If I get a 250 watt amp will I have to get bigger coax
than the rg58 (think thats what it is) that I have now? Thanks

a phone line connection is limited to whatever your modem bps speed is,
and that is the bottom line. dial ups are real slow, but the least
expensive,....cd is out.....

$150.00 Delta Bandsaw (Home Depot special)
$125.00 Delta Drill Press (Home Depot special)

I have knocked out an easy 50 1-1/2" (output) transformers in a (lazy) day.
I suppose that is considered builders quantity? <g> Then again, why the
hell would anyone order from RF Parts is beyond me. Fair-Rite is common to
builders. Im sure Peak is aware of this, you probably know this as well.

6,000 this month.. wonder how many next month. <g>

Im getting 6,000 FT 82 61's for $190.00, anyone else getting better deals,
please, feel me in...

LAFAYETTE HB400
Pin-1=audio
Pin-2=transmit
Pin-3=receive
Pin-4=sheild

The mic plug on the shematic looks like this o-2 o-1

o-4

o-3
hope this helps
creamer

Okay.. here is a simple answer. My 91 Honda Prelude handles the stock 60 Amp alternator AND a leece neville 200 amp running at 19.5volts. Then again, I have my cylinders bored out, iceman intake, dc sports ceramic headers, custom exhaust with high flow catalytic converter, greddy dual centreforce clutch, akimoto shocks/struts, machined crank and a lightened flywheel, along with a little tiny button on the hurst shift knob that I so delicately installed. <g> If this gives you an idea, then run with it... I have no problems.

Did I mention the total of about 1500 watts of stereo equipment. Though, I can honestly say I never attempted to pump the volume up AND key up/down. So... dunno.

We do it that way because our parents did it that way and our grandparents and so on. It's generally a good system, you take the (supposedly) wisest men and women in the country and you ask them to agree on issues that are of national importance. And it usually works quite well, but with every system there are flaws. I suppose we'll just have to put up with it until we all decide to change it. Or you could move into the mountains and live like a hermit.

Yah, I would _figure_ you for a boot licking snitch. Didn't doubt it for a
second. I'm sure your Mother and Father would be very proud of you.

And regarding the FBI, don't worry about it. They use my driveway for
parking space all the time. Maybe I should start charghing them !

Let's see:
The Gunrunner has already turned me in to the FBI
Gerry Schneider has threatened to cross international borders to do damage
to me
You are turning me into the FBI

Really......this IS getting a little tiresome. You can't expect me to get
very excited about this can you? After a while, the thrill of noteriety
begins to wear off.

What a dweebus. But don't worry, I think you have a lot of company. < get
it: *Company* > eh, _small_ joke.

No, there isn't a State Cop, Detective, local LEO, or Judge that I haven't
met at one time or another in the last 24 years here. They _ALREADY_ have
files on me. Believe me. If you think you're adding new information to
their database, save the 33 cent stamp. Spend it on a can of sodapop.

Now regarding why people in general don't like me? I am thought to have an
abrasive personality. Well, some of us do, some of us don't (pansies).

Maybe it's a genetic thing. I really don't know (care). The world, as you will someday conclude, is full of fruitcakes.

If I have earned myself that distinction, it is because of years of long and hard work :^) Now there are your Major fruitcakes, like
Saddam Husein,
Louis Farikahn
Slobodan Milosevich
Osama Bin Laden
I'm sure you can think of many more

and then there are the tiny fruitcakes, such as myself. Seems if you have a lot of money, it's OK to be a fruitcake. The only people who REALLY get punished on this planet are those in serfdom, such as myself.

Well there's a good reason if I ever heard one.

It's generally a good system, you take the (supposedly) wisest men and
> women in the country and you ask them to agree on issues that are of
national
> importance.

Come On, Damien. Do you _really_ think 12 Justices can fairly represent the best interests of 235 MILLION citizens? Without taking into consideration their wishes? (votes)? Gimee a break. That's Totalitarianism, not Justice. No different than the Russian Duma, or the Chinese whatchmacallit.

And it usually works quite well, but with every system there are
> flaws. I suppose we'll just have to put up with it until we all decide to
change
> it. Or you could move into the mountains and live like a hermit.

How do we change it? How can you vote somebody out of office (A Supreme Court Justice) that was _appointed_ to that office, rather than Elected? Answer= YOU CAN'T.

And we are stuck with these know-it-alls for perpetuity, or at least until they die off. What a f'ing shame. For all of us.

And why not? I can begin charging for parking space, say $12 for an all day
one-day *permit* on my _private_ property, and donuts are going for 75 cents
each; coffe $1 / cup :^)

HEY, is this going to be Tax Free income, or do I have to pay out to Uncle
Sam on this new windfall?

Not having thought through this problem before the following is sheer exercise.

The satellite has the advantage of being able to receive a ground signal at multiple points as it passes overhead so it can plot the points of weakest to greatest intensity. I don't think that would be sufficient to determine an XY axis since its orbit will always be perpendicular to the signal source.

If however the orbit could be changed and the signal were predictable, multiple passes would produce intersection points and resolve a location.

The same would be true for any elevated receiver. Commercial aircraft or appropriately equipped model planes.

The frequency is important. Microwave signals are easiest for a satellite to receive as that ensures line of sight and minimizes deflections and harmonics. Long wave transmissions that produce skywaves are much harder to pinpoint.

Food for thought for survivalists in these days of GPS and active RF implants.

Line of sight, plus a bit. No skip off the sky as such (well,
possible once in a VERY blue moon) but range sometimes vastly
increased over the horizon by ducting. Ducts occur when there
is a "temperature inversion" of layers of cold and warm air
(a high pressure system on it's way out - still winds, fog etc).

You can get hundreds of miles range on VHF/UHF with ducting,
but normally the horizon (what you can see on the clearest day)
is your limit.

5828. Re: why odd order of ch.s 23, 24, 25?

Newsgroup: rec.radio.cb
Date: 2000-03-23 00:00:00 UTC
From: Meg A Hertz <meghertzNOmeSPAM@hotmail.com.invalid>
Message-ID: <06edcfbb.5e2f58fa@usw-ex0102-016.remarq.com>
Source record: 28447

Now I'd like to know why the CB channels end in a 5, kHz-wise.
If the old ham band started at 26.96 then obviously the first
10kHz will be 26.96 to 26.97 with the carrier in the middle at
26.965 - fair enough. But was that sort of channeling already
used from 27.23 to 28? You say 27.255 was a model channel,
were 22A and 22B actually the precise freq.s for two business
channels before CB was introduced?

Cheers,
MegHz

Mark,
Theres no practical way of estimating range per watt. Too many variables to factor in. It would be safe in saying that going from 4 watts to 250 watts will increase the range in a mobile. In a very general way, if you can hear them, you should be able to talk to them, maybe.
As far as changing coax because of the power, it would probably be a good idea. Depends a lot on what your SWR is, and the voltage rating of the coax used. RG-58/u with the solid dialectic might be all you need if the SWR stays VERY low, but, RG-213 just isn't that expensive.

No, you don't. At least, I never have.

The anode cooler is longer, but the diameter is the same.

You would need a different chimney for the 8930, though.

going from 4 to 40W is only a 10dB increase (ten times) which
means a couple of S-points.

From 40W to 400W is the same 10dB increase - just another couple
of S-points! It's not a linear thing (excuse the pun).

Imroving the antenna is always best as you get the benefit on
TX AND RX. And if your signal isn't getting somewhere AT ALL,
no amount of power will change matters.

All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks
EJ (KC5EPI)

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $175

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

>range on them is their any skip on that band

Marine VHF is good for about 25-30 miles on average, OVER WATER, at the High power setting of 25 watts (at least that's been my experience with an 8 ft antenna mounted about 10 ft above the water).. distance suffers a lot more over land. There are some phenomenon affecting VHF propagation that could be called "skip" (troposheric ducting, etc) that would occasionally extend range to a few hundred miles. It IS illegal to use Marine VHF for land-mobile or land-based communications... there are also only a few channels that are not assigned as "working" channels (commercial marine communications) and even those aren't intended for idle chit chat. If near a large body of water, rest assured the Coast Guard will be monitoring many of those channels... (as will "Big Money" commercial interests).

Good photos!!! ...and good advice on lightning protection... seen too many who overlook that danger completely. Would've liked to see some pictures of the other damage... had a fella here lost everything house, garage, car, belongings, and years of collected radio equipment because of an ungrounded, unprotected tower. ...lightning followed the coax in, burnt it to the ground.

Posted an answer two days ago......
Watts (DC) = V x A
12V x 200A = 2400 W
1 Horse power = 746 Watts
2400W / 746 Watts per Hp = 3.2Hp
tack on 15-20% for losses = about 3.5 Hp

Who would you consider the #2 builder as far as sales, and how would you remotely even know who it was ?? do all the builders send in there quarterly reports to you??
Perhaps your #2 builder doesnt build as many as you think, If he doesnt have time to make transformers he doesnt have time to make money since it does save you cashish and the 10,000 number is for pieces of ferrite. Miles please drop this subject I am educating you for free here my man....

Because the USA is a republic, not a democracy. Citizens of the USA are
guaranteed inalienable rights that cannot be voted away by the tyranny
of the majority. Presently, a woman's right to determine the contents
of her own body is one of those inalienable rights just as free speech
is one of your inalienable rights.

Nope, that's one characteristic of a free republic where every citizen possesses inalienable rights. How would you like your inalienable rights taken away from you by the tyranny of the majority? Women have an inalienable right to determine the contents of their own bodies. If they didn't, rape would be legal.

I don't agree with everything one does with one's body. But I respect the concept that a person's body belongs to that individual person and comes with a legally defined set of property rights.

That's unfortunate about that guy's house. I have heard many stories about lightning and antennas. A friend of mine had lightening hit his antenna and follow the coax into the attic and start a small fire only to burn out. He did not even know anything had happened until he went into the attic for storage. The antenna was aluminum, and they had not been using the radio. He was very lucky.

I always unplugged the coax and put it outside in a Mason jar. That may have saved the house, the coax was also burnt into many pieces and had been uprooted from the ground. I don't have any pictures, I saved the top coupling and took these pictures at a later date.

It also seemed that I had better receive when the ground was installed.

Source record: 28477

Ex Vice President Dan Quayle is drinking in a bar at the top of New York's World Trade Center.
Another guy turns to Dan and says: "You know last week I discovered that if you jump from the top of this building, by the time you fall to the 10th floor, the winds around the building are so intense that they carry you around the building and back into the window."
The bartender just sighs and shakes his head in disapproval while wiping the bar.
Quayle says: "What the hell, are you a nut? There is no way in hell that could happen."
Other Man: "No it's true! Let me prove it to you." So he gets up from the bar, jumps over the balcony, and careens to the street below. When he passes the 10th floor, the high wind whips him around the building and back into the 10th floor window and he takes the elevator back up to the bar.
Quayle, with his deer-in-the-headlights astonished look, tells him: "DAMN ! You know I saw that with my own eyes, but that must have been luck, a one-time fluke."
Other Man: "Nope, I'll prove it again" ..and again he jumps and hurtles toward the street where the 10th floor wind gently carries him around the building and into the window.
Once upstairs he urges his fellow drinker Quayle to try it.
Quayle: "Well, what the hell, it works, I'll try it."
So he jumps over the balcony, plunges downward, passes the 11th, 10th, 9th, 8th floors...
and Danny boy hits the sidewalk with a ' S-P-L-A-T.'
Back upstairs the Bartender turns to the other drinker and says : "You know, Superman, you're a real asshole when you're drunk."

Damfino. 10 khz splits are pretty common for AM so it wouldn't surprise me.
European AM broadcast is on 9khz channels and 100 khz separation on FM.
Some UHF FM is on 12.5 separation. Nothing is sacred but 10 is common.

That's the problem Cecil,

You're playing *word games.* And *word games* are killing 1,500 babies a year. In the USA alone. We haven't any reliable stats for anywhere else, nevermind the US, but this is a best guess from the Extermination Centers alone (Planned Parenthood).

You don't even know about fetal organ harvesting. Or pressuring women to have abortions while they are under the influence of IV drips. Or how when these fetuses are opened, their hearts are most often beating, although their limbs are not animated. Or how *doctors* often break their necks and beat them to death with medical instruments if they are animated. Or drown them in buckets of water.

Your ignorance, and that of people like you, is what allows this unprecedented atrocity in the USA to continue unabated. Better learn some more about it before you pop-off.

You're telling me then if it was suddenly legalized, by the Supreme Court, to kill everyone of African American descent, that it would be OK in your mind, to do so. Because the Supreme Court said it was OK, you not only have their permission, you have their blessings.

This kind of sick and twisted thinking is what got us into this mess to begin with. As long as there are people like you around that don't know the difference between RIGHT and WRONG, I don't see the problem ending any time soon.

Oh. A manual. I believe I thought you were talking about SAMS photofacts or something similiar. The Sqeulch potentiometer (knob control) may be dirty or contacts worn. This may explain your troubles. Radio Shack has a silicon cleaning spray for stuff like contacts (electronical type of course) in which you can spray inside the potentiometer and cleans the contacts.... This may fix your problem with it. Does your volume control cause crackling when you turn it? If so, that is probaly all you need for all your controls.

There are I believe 746 watts in 1 h.p. So to do the math would be
(under full load condition of course) 200amps x 13.8 volts = 2760watts
divided
by 746= 3.699hp or roughly 3.7 hp. hope that helps

It couldn't pinpoint a ground location from a single short transmission,
since it doesn't know the precise direction that the signal is coming
from. If you had multiple satellites receiving the same signal at
the same time, the difference in time of arrival would tell you where
the source was. The GPS satellites have nuclear explosion detectors
that operate this way.

Also, if the transmitter continues to transmit for some time, and the
satellite is not in a geostationary orbit, the Doppler shift of the
the signal due to the satellite motion will change with time. The
specific *pattern* of the Doppler shift, plus a knowledge of where
the satellite was at each moment, tells you where the ground station is.

The old Transit satellite navigation system used this principle with
a transmitter on the satellite and the receiver on the vehicle (usually
a ship). It took one overhead pass (about 15 minutes) of just one
satellite to determine the ship's position.

Another variant of this is used by the SARSAT/COSPAS system that finds
emergency locator transmitters from airplane crashes. In this case,
the satellites have very simple transponders that pick up frequencies
in one band and retransmit them in another band. Ground stations
monitoring the latter signal measure the Doppler shift of any ELT
transmissions heard, and then from a knowledge of the satellite
position and the receiving antenna position they can calculate the
transmitter position.

A fetus is not a baby, by definition. Obfuscating the legal meaning of
words is obviously designed to elicit a subjective emotional response
rather than an objective rational one. You are the one playing "word
games".

> You don't even know about fetal organ harvesting. Or pressuring women to

Then get the laws changed. I would vote to outlaw third trimester abortions.

> Your ignorance, and that of people like you, is what allows this
> unprecedented atrocity in the USA to continue unabated. Better learn some
> more about it before you pop-off.

I am not ignorant, Lawrence. I simply believe that a woman has a right to
determine the contents of her own body. Otherwise, rape might as well be
legalized.

> You're telling me then if it was suddenly legalized, by the Supreme Court,
> to kill everyone of African American descent, that it would be OK in your
> mind, to do so. Because the Supreme Court said it was OK, you not only have
> their permission, you have their blessings.

Nope, you still don't comprehend the difference between a republic and a
democracy. People of African American descent have inalienable rights
that cannot be legally violated by a Supreme Court decision. If it ever
happens, it will happen because of people like you who want to twist
the laws to their personal purposes.

> This kind of sick and twisted thinking is what got us into this mess to
> begin with. As long as there are people like you around that don't know the

"Render unto Caesar the things that are Caesar's and unto God the things
that are God's". You would like to force your moral system upon others.

That's exactly what dictators do.

Lawrence Glickman wrote:
>
---snipped for brevety---

The controversy over the abortion issue is rooted in the debate over when life really begins. I think that the Supreme Court jumped the gun in it's decision that life begins at the moment a baby exits the womb at about 9 months. It totally ignored certain very fundamental factors. One factor is that with current technology, babies are surviving just fine at only 6 months development. I am sure that in a very few years, technology will be available to artificially handle the whole process, from conception through independent viability.

So, the basic question is, when does a termination of a pregnancy, either miscarriage or abortion, become the death of a human?

Traditionally, a miscarriage in early terms of pregnancy has not been celebrated as a death. These go generally unnoted, without a funeral ceremony or other traditional death ritual. However, in these same traditions, in later terms of pregnancy when the fetus is recognizable as human, we called this "still born" and the child was given a funeral and the death rituals treated it as any other person.

I can see little doubt that, concerning late term and partial birth abortions, that a human is being intentionally killed. You can't tell me that, if you take a needle and suction hose and vacuum a child's brains into the sewer at the last moments before birth that you aren't killing a viable human. This person is quite capable of living independently from it's mother. At the six month point in the pregnancy, due to current technology, the child might also live with the aid of life support systems. I think that killing an unborn baby at this point is also murder. The argument that the woman has the right to determine what goes on in her body hold no bearing in these circumstances. I feel she has no more right to kill the baby, because of inconvenience, than if the child were, say, a year old and mom is tired of motherhood and finds child rearing inconvenient. I think that, other that a serious risk to the mother's life and health, no abortions should be permitted past the second trimester (6th month of pregnancy). This time period may also be subject to revision as medical technology advances.

My views on abortion in the first and second trimesters become a bit more hazy. I have already discussed the traditional treatment of miscarriages and based on this I cannot personally define if a fetus at, say, 3 months is a viable human or not. It is beyond my ability to determine such a thing.

In conclusion, I think first that the mother's life and health come first in any circumstance. I don't think that this is even debatable. Abortion in the last trimester is indeed the killing of a human and should be legally treated as such and should never be undertaken for the mother's purely selfish reasons. As far as rape, incest, or grossly defective fetuses are concerned, this can usually be determined in the first 6 months of pregnancy, except under very extraordinary circumstances, and an abortion can be performed then. As for first and second trimester abortions, society will have to work that out and it will forever be an issue.

Strider

I was stating my personal opinion that it is murder, not
interpreting a legal opinion.

In theory going from 4 watts to 250 can get heard as much as 8 times
farther. In practice it is some what less.

You should be able to talk at least five miles and maybe as much as 15
miles reliably with your existing 4 watt setup.

RG58 is fine for 250 watts.

P.S.Your communication range is a two way street. The party you
are talking to has to improve their transmission also.

Apparently the concept that pure Democracy is nothing more than
mob rule when passions are raised. And that a Representative
Republic exists to protect the rights of the individual FROM the
majority.

Keep in mind that if we had not been a Representative Republic,
but a pure Democracy, the Civil Rights Act would never have become
law, because the majority of Americans opposed it.

The baby killing industry may hide behind such fine legalistic
distinctions, but it is still murder in every sense of the word
except "legal definition".

Hans

Where, exactly, is the heinous crime in broadcasting ideas? But that wasn't
the question anyway. The question (and a good one at that) was why _this_
guy out of who knows how many? And the reply suggested several responsive
ideas. I'm most interested in the content of this guys broadcast. I'm
guessing that't the most likely reason for his being singled out.

Ayup, and what was the name of that community radio station out of Berkley? I also heard that 30 or so pirate radio stations in So. Florida were busted and kept down around a year ago. I've been here all my life and didn't even know we HAD pirate radio, that's how much of a problem they were causeing.

This type of action can be seen in many, many sectors of our society. Homeschooling is getting popular, crack down on truants and stiffen homeschooling requirements. X-Lation: "Don't let any more escape!"

Pirate radio is coming in vogue, bust `em all. X-Lation: "Stop them before they get the word out!"

Raves are happening all over the country. Outlaw their drug of choice (GHB) then insinuate that they are dirty, filthy, unwholesome orgies for children. X-Lation: "Don't let the captive associate and communicate freely! There's more of them than us so we CAN'T let them organize".

Isn't this more or less what LE people refer to as an "MO"?

If that's the case wouldn't you be better off running a generator in the back to power some AC boxes? A small portable power unit could provide enough juice to run a pretty big box.

Actually it's not the modem speed, it's the phone line capability. It
really ticks me off because I have a 56kV90 modem that can't connect faster
than 32k because of the crappy lines. Our phones are so bad out here that
when it's raining you can hear everyone elses conversations. We
(neighborhood) have been trying to get the phone line to correct the
problem, but all they do is patch it up and move on. Does anyone know what
we can do about it?

++++++++++++++++++++++++++++++
I agree with you on the 'buying' it. Of course he didn't
say how long the 2SC2879's were going to last. Lets see...
14.8v X 50a = 740watts input.
740w X 1.414 X 50%efc. = 523 watts output... I guess you
could call that 600 watts. It is kinda close to it. Just
one catch though. That 600 watts includes all the harmonics,
parasitics, and other garbage. Clean it up to a decent
signal and you got maybe 400 watts and reeeaaly hot 'pills'.
In non-technical language, thats called, "Bull Shit".
'Doc

But "murder" is a legal term and you are mistaken if you
think that abortion is murder. Webster's says that "murder"
has to do with committing a crime and breaking the law.
The great majority of killings are not murder.

That would be running the engine at 100%. 60%, which is
about 2 Hp rounder up is considered max for engine life. Ad
that to 3.7 HP and round that up and you get 6 Hp.

Pulley size does matter in order to get engine and
alternator both matched for maximum efficiency, like RPM and
torque. You need to know what RPM the engines needs to run
at for max torque and engine life and the RPM of the
alternator for max alternator output.
Cheers,
John

But Hans, "murder" is a legal term. Killing is a generic term.
Murder is illegal. Killing is not necessarily illegal. Killing
in self defense is legal. Killing in war is legal. Killing with
an abortion is legal. I will back you in getting third trimester
abortions outlawed but I doubt that abortion will ever carry
the death penalty like first degree murder does in some states.

If you were kidnapped and a living fetus was surgically inserted
into your body cavity, what would you do about it when you
discovered it a couple of months later?

Source record: 28539

A simple way to scope the output signal is to buy an inexpensive Field Strength Meter and tap off the "sniffer": circuit into an old scope that you can pick up at a garage sale of flea market in the $30.00 range. If you have a scope that has over 30 MHz bandwidth, a short piece of wire on the input will pick up enough near field signal to view the modulation pattern. Both of these will keep you away from the HV circuits of the scope, and do away with the need and worries of isolation between the rig and scope.

I vote a thumbs up for Glickman too. I may not always agree with
him but, we need people that are willing to put their asses on
the line for their beliefs. I've had enough of the drone
mentality.

%%%% I agree with you on your views on abortion. I deal with human death every day of the week. (so far I have pronounced 32 people this year) and life is precious and abortion is wasting a life for convenience of the mother (insert other reasons here) In this modern time pregnancy is easily avoided, it is just a pill a day, an implant,a well placed snip or saying NO! The argument that it would be cruel to force someone to carry a baby from forced rape or incest is bullshit. In rape cases the victim is given a pill to take or given a shot to stimulate sloughing of the uterine lining (period) preventing implantation of a ovum. It is your eternal soul tho in jeopardy.

David Moffitt Lifetime NRA,GOA,TFA Member----and damn proud of it!

"Before a standing army can rule, the people must be disarmed; as they are in almost every kingdom of Europe. the supreme power in America cannot enforce unjust laws by the sword; because the whole body of the people are armed, and constitute a force superior to any bands of regular troops that can be, on any pretense, raised in the United States." -Noah Webster, An Examination into the Leading Principles of the federal Constitution (1787) in Pamphlets to the Constitution of the United States (P. Ford, 1888).

Again, you are just nitpicking. The entire discussion revolves
around whether or not abortion is murder. One side says you can't
murder a fetus, the other says you are murdering a baby. To you,
it's no worse that killing a bug. To Glickman, it's murder of a
human. This is the essential gist of the debate. Trying to
nitpick the meaning of a word is an underhanded way to try to get
your opposition to agree with your principal argument.
>
> If you were kidnapped and a living fetus was surgically inserted
> into your body cavity, what would you do about it when you
> discovered it a couple of months later?

Poor example. Babies don't get there that way. The vast majority
of unwanted pregnancies aren't from rape, incest, or impregnation
by a hostile alien life form. They get pregnant because they are
careless and irresponsible. Abortion gives them an easy way out.
Don't try to make it some noble endeavor, to right some evil. The
vast majority seek abortions because they willingly engage in
irresponsible behavior.

Silly example, LRod. For someone to be charged with the crime of involuntary manslaughter, there must be some careless or irresponsible action on the part of the defendant that caused the death of another person. I think it would be a stretch to find that in most miscarriages.

However, in your misplaced desire to trivialize the debate, you do make a valid point. If some criteria is ever determined by the courts as to when human life actually begins, then a miscarriage may well be investigated as a potential homicide. Once a being is determined to be human, all the other rights granted other humans will be vested upon the unborn child. With the rapid advances in medical technology, this determination will become ever more important. Imagine the day when people can be nurtured completely artificially. It will become important then to determine when that person is considered human under the law.

Why don't you just call it what it is? - killing a fetus.
There would be the question of whether killing a fetus is
homicide. Is a fetus a person? The law is somewhat ambiguous
on the point. Whether the killing of a fetus is justified or
not is not up to you to decide unless it is your wife or
daughter or girlfriend. Do you really want to poke your nose
into other people's lives?

You don't. The point is to turn the bit. Adjusting the belt will adjust the speed and also adjust the torque. One setting will allow the bit and the motor to stop if it binds, the other will yank the work out of your hands. All with the same 1/2 H.P. motor. I think we are going in circles here.

Old scopes are pretty easy and cheap to come by. You dont ned anything too fancy, a 5 mhz scope will do just fine. You are not going to use the vertical amp anyway.
The idea is to diconnect the vertical deflection plates from the vertical amp and connect a paralell tuned circuit across the plates. Ths i is used to step up the input voltage to a high enough level to cause usable vertical deflection. A lot of these scopes already had the connections on the back and a switch to allow direct to the plates connections. Find one of these and your job will be a lot easier.

The 'Roadrunner' is NOT a phone line connection. It is a new ISP by
Time-Warner Cable, where you connect RG-6 or RG-59 cable to your computer,
and you get on-line thru the cable company. Supposed to be MUCH faster than
a phone modem connection. But not quite as fast as a satellite connection.

I'm sorry maybe I was speaking Korean again. "......isn't a horsepower issue but a torque issue. Pulley size plays a factor." I'm on this AOL crap at this time so I don't see the reply anymore. I think he stated he wanted to use three small motors to turn his alternator. This can be done. A transmission (pulley system) along with a flywheel will do. Bo, by taking advantage of the motors torque and not the horsepower, I think his purpose would be served.

the question was how many horsepower a 200 amp alt would use. Not pulley ratios,
he is not asking how many rpm's will it take , dont you think horsepower creates torque , it can have all the tourqe in the world
but the energy to create the torque in a motor comes from hp , plus
he wants to know how much energy(horsepower) it takes to produce 200 amps.
Simple example take a good look at a drill press
the type where you can adjust the belt to a differnet size pulley which will make the drill spin faster or slower
or slower now look at the motor it says 1/2 hp by changing pulley size the motor still only produces only a
1/2hp of "energy" or torque. Maybe I just don't get it.

==========
pulley size does not matter for the original posters question,
how many horsepower will a 200 amp alt take to run. Nothing ABOUT ENGINE
LIFE.
I repeat you dont need to know pulley size to know how many hp it would use.

The blatant murder of a baby... ANY baby, should NOT be permitted in our society. Some will call it abortion. Have you ever seen an innocent baby's brain being sucked-out by a vaccuum? Makes me SICK. I only hope that the BABY lives, and the MOTHER dies, during the procedure. She's probably a tramp anyway.

What you've described above is the quintessence of the war over this issue. It is ironically, also the textbook example of what Pro Choice means; to wit: Freedom to Choose, and let others to choose.

The real vortex of the WAR, here, is that some chose to believe that Pro Choice excludes the choice to be Pro Life. Which is the absurdity of politics in the latter half of the 20th Century. Each debater must be in each extreme corner, or appear to be conciliatory, and by that, caputulatory. Which is nonsense.

Sorry for interrupting.

Carry on.

It is interesting that the pro-choice people freely allow others
to be pro-life and/or pro-choice but most pro-life people want to
curtail and disallow personal freedom in the matter.

. Each debater must be in each extreme corner, or appear to be
> conciliatory, and by that, caputulatory. Which is nonsense.

Nicely said, Peter. And abortion is not the only area where this is true.

A Radio Netherlands commentator made the same point re Ulster, a penny-ante conflict which is a crashing bore to all but a few players (some like Gerry Adams having political ambitions in the Republic or Westminster). No one gives rat tits about the issues just as long as the other side capitulates and recognizes the other as 'the winner'.

While I tend to agree with most of the NRA's position, their tactics suck swampwater. Defending the keeping of small nuclear devices in my closet under the 2nd Amendment, the great teflon bullet fiasco that cost it so dearly in membership and support, and a frenzied defense of every drug-dealers weaponry ultimately will isolate its friends and cause it to be defeated finally and totally. The gun- banners, of course, don't know a barrel from a butt and we end up with trigger locks on reenactment flintlocks. If the anti-gunners ever get their act together, all hell will break loose. By trying to defend everything, the NRA defends nothing. Again, no one really cares about corpses but who gets to chant We're Number One.

Having had a job in a hospital when abortions were performed as D&C's (Dustings and Cleanings) and the local unwed mother home was going full tilt, I got a chance to see the results of some back-alley jobs first hand (at the age of 15). While we are having this tidy little debate about when life begins, etc, desperate women will be dying alone in a pool of their own blood. Because all of the opinions, laws, amendments, pronouncements, etc by all of the males and overage women are of little help to a young, scared, pregnant woman and haven't been for 6000 years. We're Number One. Yeah, right.

Actually, if you look closely, neither side wants to permit the
other's free choice.

My own position on the subject, is that I'm opposed to abortion,
but I don't believe the issue to be the business of government.
Which makes me Pro Life. While not exactly Pro Choice, I dont'
belive it to be my business to interfere with what YOU, for example,
would choose. What neither side recognizes in its extreme element,
but what you and I may recognize here, is
that one may be Pro Life while being Pro Choice, and one may be Pro
Choice while being Pro Life, without logical, moral or legal
conflicts. I suspect there are more of us out there than there are
of the extremes, but these centrists on this issue are being told
everyday, that they cannot be satisfied with such a position, and
they must move to a more defined position on the issue. The Politics
of Opposition at work.

Pro Lifers would and do call me a coward; Pro Choicers call me a
hypocrite.

Each is threatened by and seeks to legislate the preclusion of the
other side.

And each has it's rabid element that seeks to take a "Must do"
position in either extreme.

Truth is, that neither side will ever actually win the issue,
because they're not only debating on different ground, but as you
correctly point out, speaking different language. One side speaks
morally and ethically, with adequate support and evidence in its own
behalf, while the other speaks legally, with equal measure of
support and evidence.

A meeting of the minds will never be possible between the rabid
elements because each denies the viability of the other's position.
What is moral, is not necessarily legal and what is legal is not
necessarily right. As long as each debates different turf...the war
goes on.

DON'T! The coil is at the bottom and none of your signal will radiate.
There is
a good no-drill mount available. You can see it at www.quadratec.com.
Don't
pay their extortion rate. I can get that mount for 1/3 of their price
including shipping.
Once you're mounted, any 3/8" threaded whip will work. The bigger the
better.
I've had good results with a Firestik KW-7.

Well lets see, as an experiment only, I once got plus or minus 60 miles on a mobile, parked (no engine noise) on a high bluff, in a remote area (no background noise in Northern MI) at night, with a 250W foot warmer (Texas Star) (borrowed). Wilson 5000 antenna. Uniden mobile radio. Guy said I was hitting him with 3 pounds so I prob. was getting a little farther than that, But then again these were pretty much ideal conditions.

From what I've seen on web pages, from 27.41 upwards is now
20kHz channels FM. I shall have to keep researching...

The fact remains that this thread has got absolutely nothing to do with radios and I am fucked if I know why it was originally posted here. If you want to argue the point re abortions then go and find a NG which deals with the topic. I read this NG for radio stuff not to read shit from whingers who want to impose their beliefs on others.

Siltronix 1011C, 1011D, FD1011A - Sell/Swap

For Sale or Trade -

Siltronix 1011C with manual reprint. Works, but low output and drifts

Siltronix 1011D with manual reprint. Will not load up correctly. Receiver aligned and TX aligned per service info in manual. I think the 8950 is unstable, and don't want to pay the price for a new one to find out.

Siltronix FD-1011A frequency display for the 1011D. Works, with manual reprint.

Prices:

1011C, Manual, Power Cord & Hand Mic - $125.00
Will trade for Midland 79-290 in good operating condition with Mic, bracket, manual and power cord.

1011D, Manual,Power Cord, & FD1011A Display - $200.00
Will trade for RCI 2950 in good operating condition with mic, bracket, manual and power cord

Will also consider older tube-type CB base rigs with SSB in restorable condition. These units show oxidation and discoloration on the chassis, also have paint chips on outer cabinets. They are not pristine, but could be put back into operation.

5979. CB history info

Newsgroup: rec.radio.cb
Date: 2000-03-24 00:00:00 UTC
From: Meg A Hertz <meghertzNOmeSPAM@hotmail.com.invalid>

Source record: 28598

I've been trying to understand how CB started, how the channels
came about. This is my effort so far... I'd be interested in
any further info if possible, thanks.

1933
Experimental Station W6XBC Yuma AZ operated at 27.1 MHz.

1940
World War II spurs development of 27MHz equipment for use in
tanks and beachhead landing networks. The BC-1335 4Watt military
unit is a forerunner of things to come.

1946
Doctors use 27MHz, operating diathermy medical equipment.

1947
The Atlantic City Conference - Amateurs lose parts of 10 meters
and 20 meters, but will gain a new band at 15 meters in 1952. To
compensate for the loss, the FCC allows use of the 11 meter band
(26.96 to 27.23 Mc) on a shared basis with Industrial,
Scientific and Medical devices. Class D radio for shared
professional use introduced at 465MHz UHF but was too tricky for
the time and didn't catch on. Doctors permitted to continue
using 27MHz.

1948
Firestone Tire Company granted experimental license W10XXD for
27.255MHz using for two 3 watt transmitters.

465MHz CB deemed a failure, the search is on for a replacement
band.

Early 1957
FCC Docket #11994 proposes reallocating CB in the very underused
11 meters Ham band 26.96-27.23 MHz (USA-only). At this time
there was little business/military at 27MHz and model control on
27.255 was inadequate, being shared with paging and other
services.

11th Sept 1958
The 11 meters ham band is reassigned to models and Class D
Citizens' Band radio. The band is divided into 10kHz channels,
the first channel bounded by 26.96 and 26.97 with the carrier
frequency centered at 26.965 - and 27.225 being the last channel
center - 27 channels in all. Models were allocated 5 new channel

centers, 50kHz apart, the outer channels being 35kHz away from the band edges. 22 Class D channels were arranged around the model channels that later became known as channels 3A, 7A, 11A, 15A and 19A. The old model channel at 27.255 was allocated as a further 23rd Class D channel, a shared frequency that remains as the 6th model channel also. The Business Band above 27.23 couldn't yet be used for CB apart from channel 23 - the two-channel gap between 22 and 23 gave rise to pirate channels 22A and 22B. I'd still like to know what the channels were on that business band, whether it was a fluke that 27.255 fitted in nicely with the new 10kHz steps. Official (!) US usage above 27.410 is with 20kHz FM channels (1990s) starting at 27.430 I believe.

1st Jan 1977
More CB channels added - there was talk of having 99 channels up to 27.995 but it was decided not to allow a span of more than 440kHz - to prevent intermod breakthrough to any 455kHz receiver Intermediate Frequency stages. The business band lost 27.23 - 27.41, to new CB channels 24 to 40. Channels 24 and 25 filled in the reclaimed gap between 22 and 23 (which is why the order is strange), and channels 26 to 40 continued from 27.265 to 27.405 - by coincidence the first two decimal places matched the channel number. The five newer model freqs are now part of an allocation from 26.96 to 27.28 in the UK with channel 25 now being "Blue" (27.245) and channel 02 now "Black", amongst other interleaved channels. In the USA, channel 23 is still the "Blue" model channel.

Thanks in advance,
MegHz

The ARRL Letter
Vol. 19, No. 12
March 24, 2000

* FCC fines Washington firm for illegal amplifier sales: The FCC has affirmed a $7000 fine on Cellular Systems Northwest Inc of Enumclaw, Washington, for willful and repeated violations of the Communications Act and FCC rules relating to the sale of transmitting equipment. In a Memorandum Opinion and Order March 16, the FCC said Northwest, a consumer electronics dealer, on two occasions in 1997 and 1998 sold and offered to sell "external radio frequency power amplifiers--commonly known as 'linear amplifiers'" to two different FCC agents posing as a member of the general public. The FCC said the amps were capable of operating in the 27-MHz Citizens Band. A Notice of Apparent Liability was issued in June 1998. Northwest sought recission of the $7000 forfeiture saying it never intended to offer or recommend the linears for CB use; its violation was unintentional; that it had ceased selling the illegal equipment; and that it is "small retailer" attempting to make ends meet. The FCC was unmoved and upheld the $7000 fine. The company was given 30 days to pay.--FCC

I've seen different results. Not that I have ever done anything
illegal but in my dreams (my dreams are quite accurate) I have
been able to talk 250 miles with power and without the help of
skip. Talking without the use of this power would only get me
about 50 or 60 miles.

Hello:

What im looking for is some input on which CB would be a good choice
as far as workability (good all around radio) and possibly easily
modifiable.
Id like to get one with SSB. I also have a chance to pick up a polomer
225
new in the box for 100.00 and need to know which radio would work best
with this unit. and if the polomar 225 is a good unit...
thanks in advance...
charlie...

P.S. This radio will be going in a 99 ford F350 crew cab.

>
> QRM

It was proposed as the reason why CB was not expanded to the 99 channels Phase 2 originally had in mind. The theory was that the receive oscillator when tuned to Channel one would be 26.965 plus 455 which would mean a receiver tuned on one would wipe out 41 in its vicinity. Most don't think of this as a problem but remember that there is a lot of evidence that CB was a project for summer interns at the FCC from the very beginning. By the time it could be re-examined, we were blessed with Convoy (C W McCall -not his real name - hated C&W and had to psyche himself up to even do it) and the Commission lost interest. They had, by this time, virtually cleared the old business band and left it to freebanding.

Meg is right.

Dick

I'll take your $500,I run a 10Meter net friday evenings and at 100 watts (4 el Yagi) get stations from 50-120 miles also running 100 and dipoles.When I go mobile at 100 watts and 1/4 wave whip I can still work them...consistently.

> >>You need to triple your power to gain an "S"unit, and thats

If this quarter wave whip that you are referring to is the 102" ss
whip
then something like the X-terminator type of antenna. That is......a
larger diameter, higher conducting (chrome, copper,silver) moderately
non base loaded ugly looking antenna.

The best performer is a full length whip. Just not the Stainless
variety.

I run a 102" on 10 and 12 and you are right.On the other bands I use
Valor pro-ams which are the same antenna as the Hamsticks I believe only
I get them wholesale for $11.25 a piece.
Even though the pro-ams are only a foot shorter than the full-size
antenna the bandwidth suffers tremendously so I can see why so many are
unhappy with thier 3'-4'ers.

Take responsibility for your actions. The men are just as "careless
and irresponsible." It only takes a few seconds to ensure a pregnancy
won't occur. (And why was the original x-posted to the radio NGs?)

>take 20.1072386 dBi of gain to equal 250 dBW, where your figure of 18
>dBd is closer at 252.38294 dBW.

You are lost. We are talking db's as in ratios only. The reference
is four watts. Not four watts dbi. or dbd. Stop confusing the issue
with needless garbage.

10log250/4 = 17.95880017 If you want an exact figure.
>
> And Henry radio DID claim a 10 dB gain, but that's their problem.
>I'de like to see you post their response here if you care to write
>them about it. I'm sure they will have an explanation.
>
> But your last figures on the 10dB gain of 100 watts to get to 1500
>dBW is a bit low. It would be closer to 11.76 dBd of gain. 11.7609126
>to be EXACT. And if you really want your socks blown off, the ERP is
>STILL only 31.760912599999997, and the EIRP isn't much better than
>that at 33.90935108047697.

Excuse me......That is NOT my figure. You claimed 100:1500 was
10db. You insinuated that if I didn't agree with you then go ask Henry
radio..............Shall I quote you..........
****
The amateur manufacturers of
amplifiers will even state that going from 100 watts to 1500 watts
only gives you 2 - 3 S units of gain. And Henry Radio states in their
spec a 10 Db gain.... that's going from 100 in, to 1500 out. So, you
may not believe me, but better write them and tell 'em they're wrong
before somebody sues 'em for false advertising.

>signal.

27 mhz is not strictly line of sight. Being such, a power
multiplication factor of 62 does make a difference. More than
double the distance

You can talk to the edge of the radio horizon on about 50 watts, 100 would make you sound a little better but not give you much more in range.

5997. Anyone running out of phase mobile antennas?

Is any one out there running this type of system. I just don't
understand the gain factors that are claimed. How can you get gain by
feeding 2 antennas out of phase like that? I have tried to look it up
in some of my RF books but have found nothing. Can someone give me some
input on this type of system and what kind of experance you have had
running it.
Thanks,
Bean

The Welsh Amateur Radio Exhibition.
Incorporating Computing & Internet.

Our next exhibition will take place on Sunday 26th March 2000 and it will be the best yet!

This year we will be featuring, centre stage, our 'Multimedia Shack' presentation with live demonstrations of computer aided station management, computer rig control, scale models of AMSAT satellites, 'live' fast scan TV and many digital modes including 'live' APRS presented by Kenwood UK.

Using state of the art equipment including multi video projection units this will be a show no serious amateur should miss!

We shall be returning to our original venue, the newly refurbished Memorial Hall, Barry, South Glamorgan. With ample parking this is an exciting venue with licenced bar and catering.

The exhibition opens at 10am for the disabled and 10:30am to the general public. We plan to have a special guest to officially open the exhibition at approx 11:30am.

Further information available from Brian Brown 01222 832253

I already rebutted your post regarding this. But I'll cut and
paste for your convenience:

*******begin repost****

Birth control is accessible and inexpensive in America. Women who
have an unwanted pregnancy, other than by force, are careless and
irresponsible. This is certainly an issue for society as a whole
because of the high probability that such behavior will be paid
for in some manner through individual taxes. Further, it is a
civil rights issue. Americans have the right to life as stated in
the Constitution.

In insisting that abortion be completely unregulated and "on
demand" you have imposed your moral convictions on the remainder
of society. The issue is society coming to some consensus as to
when human life begins.

I'll ask you. Are you wise enough to determine, definitively,
that an abortion does not end a human life? Can you state with
certainty when human life begins? Toss aside your political
affiliations for a moment and think about this.

I suggest that if you are going to jump into this debate that you
at least go back and read the preceding posts, in whole, not as
edited by successive posters.

Strider

*******end repost*****

Are you going to attempt a straight answer to my questions or do
you plan to waffle around like your friend W6?

With this, I agree. Both parties share equally in the
responsibility (ot irresponsibility as the case may be).

I don't know why this was cross posted. I followed the thread for
a time before posting any comments. The only newsgroup I follow
is misc.survivalism. We've had a plague of cross posts lately.

Then why doesn't the USSC allow me to protect myself if indeed they say it
is my responsibility to do so?
Why to they disarm me when I am in public, which is exactly where I am at
most risk?

You tell me they say we citizens are on our own. It is our responsibility
to protect ourselves, and at the same time you take away our ability to do
so, from the Executive Level all the way down to the State and Local level.

Do you see a problem with this? I do.

6008. swr meter question

Newsgroup: rec.radio.cb
Date: 2000-03-24 00:00:00 UTC
From: M&M <inky@goodnet.com>
Message-ID: <4TSC4.130$eb.11815@news.goodnet.com>
Source record: 28670

I just recently acquired a CB radio and a used swr meter. The meter is made by "Mr. CB" and has a switch that has two positions - "FWD" and "REF". It also has a knob labeled "cal" and an analog meter on the front that ranges from 1.0 to 3.0. My question is - How do I work this thing? Any help would be appreciated.

Thanks in advance,
Mike

OK, after people denying that I could actually do this feat of radio magic
I had to get a map out to check distances, You know what, they're right, I
was off on my mileage..

Boyne Falls, Michigan, United States and Saint Ignace, Michigan, United
States, as the crow flies:
49 miles (79 km) (43 nautical miles) (map.com)

And let me also note that I was at the peak of the highest hill in the
area. about 1300' compared to surrounding terrain average of 600-700 to the
north. So I definitely had the line of sight.
I had a quiet night, low noise night; Gain at max, volume at max, & barely
a hiss out of the speaker. I realize 49 miles isn't 60 I quoted earlier,
But the base station I was talking to said I was hitting him with three
pounds, So I'm guessing I could be heard farther still.
This was accomplished in early Sept. 1999, about 11 p.m. Maybe that
Texas Star DX250 was putting out more than I thought (on AM not SSB)

>excellent bandwidth (as Q is given up by a unity gain figure from a
>quarterwave).

UNITY GAIN FIGURE=0 So actually ZERO gain over a reference dipole

>I believe I have answered the question quite well. At least more
>accurately. Perhaps you forgot to read my answer. I will post
>it here once again.

I didn't see any of this on the RE: post

but...

>**********
>All things being equal:

>1.Top loaded antennas perform marginally better than base loaded

AGREED, well... maybe better than marginally.

>2.Taller antennas (less loading coil) perform better than shorter

AGREED

>3. Thicker antennas perform marginally better than thinner.

AGREED slightly broader bandwith, unless you use multiple
radiators to duplicate a VERY large radiator. Virtually impossible for
mobile.

>4. More conductive antenna stock makes a marginal difference
> over less conductive antenna stock.

AGREED, but copper is way to soft, and aluminus doesn't hold up to
well either for mobiling. Portable, OK, but not mobile.

>5. A higher antenna mount works better than a lower mount.

AGREED

>6. A free and clear antenna mount works better than an obstructed one.

AGREED

>7. A more substantial RF ground works better than a minimal ground.

AGREED

>8. A vertical antenna performs better than a diagonal (windblown).

AGREED, but I'm sure you've seen tall antennas guyed.

>Number 5, 6, & 8 are the most important factors in the performance of
>an antenna.

> Now if any one could come up with a formula that includes all of
>these factors then we would be able to answer your question. There
>is no formula. However we can say this.
> The best mobile antenna is a thick stiff nine foot whip that is
>silver coated and mounted on top of the roof with multiple radial
>grounding points.

Actually, gold plating would be better. Better conductivity (best
known so far), and it doesn't oxidize. Although the oxidation of
silver does conduct well. Better check your chart again.

> No one is going to use the antenna above in the real word, so one
>might draw the conclusion that in the real world we might substitute a
>102" stainless whip for the best real world performance. WRONG.
> The 102" is made of stainless. Stainless has only 3% the
>conductivity of copper. This alone will stop the 102" stainless from
>being the top performer. Subtract also the fact that the 102"
>stainless bends over in the wind and is also a relatively thin
>antenna.

You can go with a fiberglass 102", it is copper, but for some reason
it doesn't work as well. Especially doesn't like low hanging tree
limbs.

> So what is the best choice? It appears that for a realistic
>antenna, it is a mildly loaded top or center loaded antenna made
>of thick conductive materials. There are a few of these ugly looking
>antennas around. They do work marginally better than the
>102" stainless and have the benefit of being shorter. These
>antennas can get as short as five foot and still equal or
>outperform the 102" stainless.

Here we go with the marginally again, and I AGREE AGAIN! But, I tried
one of those 5 foot top loaded antennas that I picked up in a CB shop
back in my virgin CBer days, and it just didn't cut the mustard. So I
disagree on the outperforming part. And NO bandwidth.

>Percent conductivity of materials, based on copper being the standard
>of 100%

>Aluminum 65%
>Brass 28%
>Chrome 74%
>Gold 71%
>Iron 17%

>>(that's a quarter wave on the 11 mtr band) whip before you TRY to
>>correct me? THEN...

>That is not what you claimed. I will quote you.........

>"At the risk of getting flamed (who am I kidding, it's inevitable),
>the best *overall* antenna is the 102" SS whip."

Why snip it there? Let 'em read ALL I claimed. You can't pull shit out
of context like that and be fair.

>Does not the SS stand for stainless steel? If you are NOW saying that
>a 102" whip can outperform a loaded antenna then I will agree. But
>you were referring to something else.

I referred to a hamstick as an alternative to the 102" stainless steel
whip if he wanted something shorter. They also retail for about 25
bucks.

>>you can come back and TRY to give a reply to the
>>question raised in the post.

>I believe that I have done that.

Finally.
I think your intent was to give me a black eye on your first reply to
my reply...... eee-i , eee-i , ooooooohhhhh.

>> I don't think that the poster asked for ANY of what you offered.
>>(which was NOTHING btw)

>I think most readers of these posts would prefer accuracy. Therefore
>corrections should be made when someone is in error.

Well, I don't see how you've said too much different than I did.....
you messin' with my head man?

>Signed... Mr. Mystery Man, formally known as tnom

OK tnom, only thing I can really bitch about in this post is tearing
up a post to exclude info that may be important to readers just
joining the thread. Which MAY be why I missed some parts that you said
you posted before.

So, lemme add this, and then a rebuttal:

"Scott (Unit 69)" <upplus@-NOSPAM-hotmail.com> wrote:

Scott Scott Scott..... where do you get your info from? True, a center loaded, better yet- top loaded - antenna will perform better than a base load. Superior radiation efficience, bandwidth, and resistance match. But base loaded antennas will still do a fair job. Especially on such a narrow band as the *legal* citizens band. Alot of the performance factor depends on each individual installation.

At the risk of getting flamed (who am I kidding, it's inevitable), the best *overall* antenna is the 102" SS whip. No load, very forgiving power handleing capability (more limited by the feedpoint integrity) excellent bandwidth (as Q is given up by a unity gain figure from a quarterwave). But I think you'll find in mobile installations, that the increased capture area/radiating surface area far exceeds the peformance gain claims of alot of the new *super-dooper* antennas out on the market. Market=Marketing..... in otherwords, if we tell 'em it's new and improved, it's gotta be better. Now, don't get me wrong, in certain instances/installations something else will out shoot the quarter wave. I'm just saying on the average, the 1/4 wave will have the better average performance. Ask a ham what he runs for 10 meter mobile. Bet it's a quarterwave.

So..... *I'de* run (and do) a quarterwave. ie: 102" Stainless whip, or check out www.hamstick.com click HF then 6-75 meters.
Bet you won't mind the price either!
(remember the word for the day? -MARKETING-) Lot's of companies have taken advantage of the fact that no technical knowlege is required to legally operate on the 11 meter band.

Now, it appeared to me that this guy was looking for an all-around decent antenna with good bandwidth that *maybe* could handle a little power. I've run ALOT of antennas in my mobile days. Never could get myself to want to spend 100 bucks or more on some of those BIG GUN

antennas made for MOBILING. Sure, you can get aluminum and copper shootout antennas that will blow mobile antennas away, but you can't mobile with them.
So, I ran just about all the mobile antenna designs. Bought the ones that were priced realistically, and home-brewed some of the *intelligent* designed ones that were overpriced. I travelled for a living, and had many opportunities to work fellas back home and get truthful signal reports. Some of the designs other than the 102 talked better, but couldn't hear as well. Contrary to what your girlfriend tells you, SIZE IS EVERYTHING ! (not a personal attack, just trying to use a little humor)
So, from all that, I decided that for best all around ruggedness, performance, bandwidth, reception, power handleing capability, the 102" stainless steel whip was a pretty jam up lil' antenna.... and all for $12.00 ! Now, I did guy it with a long rubber tiedown strap (the kind you can find at a truckstop, Wally World, local hardware store) just remove one of the hooks, and slip it down the antenna from the top. It's enough to hold it up at highway speed, yet give when you bonk a tree limb.
So don't cut the little 102 down (pardon the pun) without a fair shake. It seems to meet MOST of your criteria for a good antenna, tnom. Can't see what all the fuss was. If you wanna blacken someones eye, why don't you go after the guy who wrote:

>DON'T! The coil is at the bottom and none of your signal will radiate.

Hmmmmm, bottom loading coil = NO radiation??????

NO-ONE could disagree with an attack on that ! (well, maybe the guy who wrote it)

Let me go see how we're doing on the *other* post.

I believe I'm done trying to help anyone with any info..... too many pirrannahs in this pond.

Hamm4fun,
I know I'm going to regret this.....

'Hamm', I'm afraid your wrong in your definition of what an SWR meter is. The common SWR meter measures VSWR, Voltage Stnading Wave Ratio. It
does this by measuring the forward voltage, of the emitted signal, then the reflected voltage of the signal. The SWR meter then 'reads' this difference on a logarithmic scale on the meter face. An SWR meter does not 'read' impedance. Impedance is not directly measurable with "common" meters used by a radio operator.
The length of the feed line has nothing to do with the readings of an SWR meter. The length does play a part in impedance "matching" at times. If you want to really find out what the impedance input of an antenna is while it is 'up in the air', you can use an 'even' multiple of 1/2 wave length feed line (at the resonance freq), an RF generator of known impedance out put, and an SWR meter. The ratio of impedances is the same as the SWR ratio. Plug in the numbers, turn the crank, and you've found your antenna's input impedance. Odd multiples of a 1/2 wave length end up being a 1/4 wave length (the even number of half waves 'cancel out'.
"Good luck in the contest".....
'Doc

My info comes from 23 years of CB experience. I have tried it! I figured I would post something that works and save the guy from trying a hundred things, and several hundred dollars finding something that works on a TJ. I actually have a RS stud mount in an enlarged hole where the bumper caps were. 1.2:1 is nothing to sneeze at. I've had Wilson's and K-40's and 1/4 wave whips and others that I can't remember. I use $16.00 KW-7's on both my vehicles. I get out all over town (just like a ho :)

I may or may not agree with you on the abortion issue. It is just
impossible to have a reasoned debate if you deny the dictionary
meaning of words. We have nothing to discuss and we have no
common language because you have deliberately sabotaged the
language. Anytime you want to use the correct definitions of
words or even invent your own words, I'm all ears.

Can you believe the nerve of someone who refuses to accept the dictionary definition of words? He's not likely an engineer. We make our living using correct definitions. It's quite an argument. "You're wrong because I don't accept the definitions in the dictionary of the common language we are trying to use to communicate." Wonder if I can get away with that approach over on rec.radio.amateur.antenna? :-)

Snip .....Notice: I am not snipping to take the author out of context. I am doing this only to facilitate easier reading.

>> Now if any one could come up with a formula that includes all of
>>these factors then we would be able to answer your question. There
>>is no formula. However we can say this.
>> The best mobile antenna is a thick stiff nine foot whip that is
>>silver coated and mounted on top of the roof with multiple radial
>>grounding points.
>
>Actually, gold plating would be better. Better conductivity (best
>known so far), and it doesn't oxidize. Although the oxidation of
>silver does conduct well. Better check your chart again.

Sorry but I must correct you again. Silver is more conductive than gold.

>> No one is going to use the antenna above in the real word, so one
>>might draw the conclusion that in the real world we might substitute a
>>102" stainless whip for the best real world performance. WRONG.
>> The 102" is made of stainless. Stainless has only 3% the
>>conductivity of copper. This alone will stop the 102" stainless from
>>being the top performer. Subtract also the fact that the 102"
>>stainless bends over in the wind and is also a relatively thin
>>antenna.
>
>You can go with a fiberglass 102", it is copper, but for some reason
>it doesn't work as well. Especially doesn't like low hanging tree
>limbs.

In my tests the Francis Amazer (96"copper) antenna does marginally outperform the 102" SS.

>> So what is the best choice? It appears that for a realistic
>>antenna, it is a mildly loaded top or center loaded antenna made
>>of thick conductive materials. There are a few of these ugly looking
>>antennas around. They do work marginally better than the
>>102" stainless and have the benefit of being shorter. These
>>antennas can get as short as five foot and still equal or
>>outperform the 102" stainless.
>
>Here we go with the marginally again, and I AGREE AGAIN! But, I tried
>one of those 5 foot top loaded antennas that I picked up in a CB shop
>back in my virgin CBer days, and it just didn't cut the mustard. So I
>disagree on the outperforming part. And NO bandwidth.

You did not use a good performer. Not all five foot top loaded
antennas are created equally.

Snip..... let's get to the point.....

>OK tnom, only thing I can really bitch about in this post is tearing
>up a post to exclude info that may be important to readers just

Yes indeed. By all means, keep your nose in those *books* because those
books you can't seem to get your head out of are the source of all Truth and
Wisdom.

Here's something from a *similar* book from Nazi Germany, circa 1935:

"Circa 1935 : two Jewish pupils are humiliated before their classmates. The
inscription on the blackboard reads : "The Jew is our greatest enemy! Beware
of the Jew!".

Dictionary definitions. Indeed, W6, I see you are lost to the world about
you.

Want to wager some money on who has the higher IQ?

Our argument was not over abortion. Our argument was over the
foundations of the scientific method. Scientifically speaking,
elective abortion is killing a fetus.

Is it legal to kill a fetus during the third trimester?
Yes, it is presently perfectly legal.

Is it wrong to kill a viable fetus during the third trimester?
My personal opinion is, yes, it is wrong and I would vote to
change the law.

See how easy it is to be rational and logical without having
to resort to obfuscation?

Communications is impossible unless the two people trying to communicate
are using the same dictionary. The fact that you refuse to use the standard
dictionary of the language in which you are posting just means that you
have no desire or intention to communicate. Why bother even posting? Why do
you choose to confuse, confound, and obfuscate the language?

The dictionary is the bible of communications. Reject it and communication
is impossible. You might as well be speaking in unknown tongues.

B.Bean,
The advantage to using two phased antennas is that you have
a directional antenna system. If they are in-phase, the pattern is
broadside to the antennas. If out of phase(180*), the pattern is
'in-line' with the antennas.
There is some gain to this arrangement, but not a lot(maybe
1-2 db), and depending on where the antennas are mounted, maybe
a signal loss. Most of the 'phased' antennas you see are not
really directional, the antennas are mounted too close together.
And when you come right down to it who wants a directional
antenna system on a car thats changing directions all the time?
'Doc

Here's a little more info from an Electronics Illustrated May 1969 article.

" World War II touched off a technological revolution in two-way radio. The war effort required a whopping slice of the radio spectrum for aircraft, ship, Jeep, tank and foxhole communications. Among the frequencies paraded off to battle was 27mhz. It was assigned by Allied and Axis forces mainly to tanks and beachhead landing networks. By a strange turn of events it appears that the peculiar nature of what is known as CB skip may have cost German General Rommel (the Desert Fox) the battle of North Africa. As the story goes, a ham operator in Rhode Island made recordings of strange, foreign-language transmissions he heard every day on 27mhz. One day he played the discs for a friend who could speak German. The friend quickly realized the broadcasts were part of a vast military communications system of German tanks and base stations. What Allied forces were missing on their rigs was being picked up at a distance of 3,000 miles. When the U.S. Navy was called in it decided the tanks were Rommel's in North Africa. The Germans were engaged in a notorious cat and mouse game with the British. Although skip signals were heard on an almost daily basis they had one baffling quality. They were only readable within a few square miles of Rhode Island territory. Military Intelligence took over a Rhode Island farmhouse and crammed it full of 27mhz receivers and German translators.
Every command to Rommel's tanks, every position report, every request for supplies by the Germans was promptly monitored, transmitted and flashed back to Montgomery, the British general in Africa. The battle of El Alamein may very well have been lost by the Germans because of CB skip!"

Hope you all enjoyed this tidbit of 27mhz history,

Retro-Dave http://www.retrocom.com

Why is it necessary to adopt a baby? There are plenty of older
children that are in need of a good home and proper guidance.

> something that it is not does not lead to valid communications.

I believe that I am communicating with you. It is my belief that,
at least at the third trimester, it's a baby, not a fetus, and
it's murder, not just a toilet flush. Hiding behind
technicalities of the language do not strengthen your side of the
debate one snip. This just convinces me that you really have
little to say.

Of course, those who want unrestricted abortions couldn't look
themselves in the mirror in the morning if it weren't for
alteration of meaning and language like "fetus" (ohh! not unborn
baby) or "termination of pregnancy" (oh no! It's not really
killing a baby). I therefore am not going to play your little
word games with you. You know damn well what I mean and I
understand you fully, so cut the shit.

>
> > Don't try to make it some noble endeavor, to right some evil.
>
> I'm not trying to make it noble - just none of your business.

I hate to inform you, but it is society's business and therefore,
mine. The simple fact that something is legislated upon or ruled
upon by our court system certainly make this a valid public
debate. As a citizen of the US, I most certainly have the right
to debate and speak out upon any topic I please. Saying that the
abortion issue is none of my business is like saying that public
health, crime, and taxes are none of my business.

You just couldn't be more wrong.

When it is called for, I try to point out the cause and effect
relationship. In this case, I am referring to abortion being used
repeatedly by some women as a form of birth control. Which I believe
comes from the erosion of the family structure, religious, and simple
humanitarian values. Which is all directly impacted by the WoD.

What is the relevance of this statement? The entire issue is
about society's allowing, disallowing, or restricting a certain
activity. No society allows complete personal freedom. The
politics of our society is all about what is allowed and what is
not.

It is still against the law to transmit out of band or on any frequency
that you are not authorized, such as police frequencies. This guy
was out of band. It is just that there are so many of them, why was
this guy singled out? Is the FCC now going after outlaw CBers?
And why such a huge fine????

BTW, my community passed an ordinance to allow the local
cops to enforce FCC rules against CBers.

This is certainly a false statement. It is akin to the
"No Code = No Ham" statement. Pro-Choice means giving
each individual ownership and control of his/her life.
The individual is free to adopt a Pro-Life position if
he/she chooses so, sometimes, Pro-Choice = Pro-Life.

Tried the FCC data base? I would question whether anyone is actually there.
There was some FM at one time on the hi end but it was antique 30 years ago.
20khz is spacing for 5kc swing FM so the assignments have to have been
changed since the wider stuff was outlawed.

But you are *NOT* communicating with me because we are not speaking the same language. I am following the language standard defined in the dictionary. You are using different definitions apart from the standard of the English language. You might as well be grunting in Klingon. If you do not use standard definitions, communications is impossible. The *facts* are that it is a fetus and it's not murder. Deny the facts all you want - it just leaves you out in left field being uncommunicative with no one to talk to.

IMO, your attempt to obfuscate the English language is a ploy to avoid communications and try to introduce raw primal emotion into what could be a rational discussion. Old trick, won't work.

> I hate to inform you, but it is society's business and therefore,

It is none of your business and it is none of society's business. It is a private, personal matter based on individual rights upon which this country was founded. Where do your delusions about your authority to interfere come from?

Suggest you also find out just what the legal ISM freq in the area is -- I think it is down below in the 26's somewhere. The Vets Hospital at Jefferson Barracks had one of those diathermy machines that could blanket the area for a mile or two. Firestone more than likely had thoughts of curing tires.

My involvement with 11 meters was as a bootlegger (Had a Tech at the time) because the amateur rules of the era allowed A4 only on 11 meters. I won't describe the lash up that two 14 year olds could invent but we actually did manage to send a picture.

One of the keys to opening up the whole area, from 20 to 30 Mhz was the removal of the TV i.fs from the area. The pix i.f on the old sets was at 26.75.

The other was some decent tubes for the purpose. The older tubes (theme and variation on a 6L6) pooped out above 20. Most receivers had Siltronix disease as well.

For most of its life the 27 area has been a backwater and/or dumping ground. To some extent, you have become the historical chronicler of the city dump. :)

Good Luck

Dick N0BK

6050. FCC LEVIES HEFTY FINE ON FORMER AMATEUR

Newsgroup: rec.radio.cb
Date: 2000-03-24 00:00:00 UTC
From: "Kevin Muenzler, WB5RUE" <wb5rue@stic.net>
Message-ID: <8bg5u8$4ci@nnrp3.farm.idt.net>
Source record: 28712

This is what being hard-headed (or any other part of your body) will get you in the face of the FCC these days.

--FCC LEVIES HEFTY FINE ON FORMER AMATEUR

The FCC has told a former Houston, Texas, amateur that he's liable for a $17,000 fine for unlicensed operation and for failing to allow the FCC to inspect his radio equipment. A Notice of Apparent Liability for Forfeiture--an NAL--was sent March 3 to Leonard D. Martin, formerly KC5WHN, by the FCC's Houston Office.

Martin has bumped heads with the FCC on several occasions. The FCC said it received a written complaint in May 1998 alleging that a station identifying as KC5WHN was operating on frequencies not authorized by his Technician ticket. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth sent Martin a Warning Notice in November 1998 outlining the complaints. The Commission said Martin "generally denied the unauthorized operation."

After tracking transmissions on various 27 MHz frequencies to Martin's residence on at least two occasions in early 1999, an FCC agent was twice rebuffed in his efforts to inspect Martin's radio equipment. The FCC's Houston Office issued Martin an Official Notice of Violation last April. Martin acknowledged the complaint and promised that "no further action by the Commission" would be necessary. In July, he turned in his Amateur Radio license for cancellation.

Martin's troubles didn't end there, however. Last October, following up on complaints of RF interference to a telephone in Martin's neighborhood, the FCC again tracked 27 MHz transmissions to Martin's residence. Martin reportedly again refused to let the FCC inspect his equipment.

The FCC NAL said that, based on the evidence, Martin "repeatedly and willfully" violated Section 301 of the Communications Act by operating without an FCC license and by refusing to allow an FCC inspection of his radio station. Martin has 30 days to pay or to request reduction or cancellation of the proposed forfeiture.

He is gaining 18db. His range will more than double, even with line of sight conditions. Realistically he'll probably gain about 4 times the distance. That would be, using your average 5-8 mile four watt distance a 20-32 mile 250 watt distance.

Snip

>You need to triple your power to gain an "S"unit, and thats
>geometrically. (4 watts=1 s unit - 12 watts=2 s units - 36 watts=3 s
>units and so on)

You need to quadruple your power to gain one S-unit. Each S-unit equals 6db.

>So, you see it doesn't take long to get up to 250
>watts ! In fact at this rate, we didn't pick up but about 3 1/2 s
>units under *ideal conditions* (that hill top in a vacuum, no rain,

6055. WTB: B&K 1040 Servicemaster

Newsgroup: rec.radio.cb
Date: 2000-03-24 00:00:00 UTC
From: brian9645@my-deja.com
Message-ID: <8bga0r$617$1@nnrp1.deja.com>
Source record: 28717

Looking to buy a B&K model 1040 CB Servicemaster,
working or not. Prefer good working unit.

Please e-mail details to briguy844@hotmail.com

Sent via Deja.com http://www.deja.com/
Before you buy.

Your assertion that an unborn baby is merely a fetus is just
that, your assertion. It is my assertion that, at some point
prior to birth, it is a person. Killing a person, in some
instances, is murder. I am asserting that this is one of those
instances.

This is the issue. You see no problem killing a fetus. I am
disputing your assertion that an unborn baby is merely a fetus. I
am asserting that, at some point prior to birth, it becomes a
child.

I adamantly refuse to reduce this discussion to any lower grade
level to satisfy your continuing obstinance. You use whatever
language you like to make your point and so shall I. I refuse to
comply with your personal opinions on definitions surrounding
this subject so if you want to continue this discussion, get over
it.

> which this country was founded. Where do your delusions about your

> authority to interfere come from?

As stated, it is my belief that, at some point before birth, the unborn baby becomes human and therefore entitled to all the rights and privileges protected by the Constitution. One of those is the right to life. Killing a human is not a private, personal matter. Killing an unborn child 2 minutes before emergence from the womb is no different from killing it 2 minutes after. If a Doctor jabbed a needle into a, say, three day old baby's head and sucked it's brains into the toilet that Doctor would be up on murder charges. This brings the act into the public domain. The debate is, at what point does an unborn child receive the same privileges as those that are born? This is certainly not a private, personal matter.

: Fair enough but it's still not HIS country, it's everyones.

Actually, if there is a majority of Americans who decide
to kick out people on a certain basis, and they have enough
voters to control who gets on the Supreme Court (USSC).
Based on the assumption, from the extreme left-wingers, that
the Constitution is what the USSC says it is (a living document)
then if you control the presidency and the USSC then you
can dictate who has what rights.

Do you believe yourself wise enough to judge whether a person is killed at an abortion or is it just tissue removal? Can you state with certainty at what point human life begins? What if you are wrong? Do you have enough knowledge and wisdom to answer these questions?

I don't believe that you would intentionally kill someone unless it were necessary. All I ask is that you take a moment, lay all the peripheral issues aside, search yourself, and ask these questions of yourself. Are you sure, beyond all uncertainty, that someone isn't being unjustly killed in an abortion?

I cannot be sure.

```
: is this another reason not to get a ham ticket?
:

What got me was that they even went after him.
Think about it, there are millions of freebanders
out there. Most are minding their own business
and cause little interferrence to others. I wish
that many hams were as nice.

It wasn't his ham ticket that got him in trouble.
It does seem that it was more like he has an
attitude problem. That and using his callsign
in an out of band area (that is just plain dumb).

Flamed? How about corrected? Best overall?

For the CB band the 102" SS is not the best overall antenna.
It has been shown to have slightly less gain than other antennas.
It has been shown to lean heavily and lose gain in the wind.
With realistic amounts of power it has no gain over other antennas.
It has been shown, by its height, to hit more objects than other
antennas.

The only real gain is from your wallet. The 102" SS is cheaper than
the other antennas that outperform it.

: . Each debater must be in each extreme corner, or appear to be
: > conciliatory, and by that, caputulatory. Which is nonsense.
:
: Nicely said, Peter. And abortion is not the only area where this is true.

The nice thing is that the NRA just ended any chance of there
now being a middle ground on guns. By forcing people to take
sides, there will be no compromises.

: A Radio Netherlands commentator made the same point re Ulster, a
penny-ante
: conflict which is a crashing bore to all but a few players (some like
Gerry
: Adams having political ambitions in the Republic or Westminster). No one
: gives rat tits about the issues just as long as the other side capitulates
: and recognizes the other as 'the winner'.
:
: While I tend to agree with most of the NRA's position, their tactics suck
: swampwater. Defending the keeping of small nuclear devices in my closet
: under the 2nd Amendment, the great teflon bullet fiasco that cost it so
: dearly in membership and support, and a frenzied defense of every
: drug-dealers weaponry ultimately will isolate its friends and cause it to
be
: defeated finally and totally. The gun- banners, of course, don't know a
: barrel from a butt and we end up with trigger locks on reenactment
: flintlocks. If the anti-gunners ever get their act together, all hell
will
: break loose. By trying to defend everything, the NRA defends nothing.
: Again, no one really cares about corpses but who gets to chant We're
Number
: One.

It is called "Tribalism". It is the "new world order" where we have
globalization with tribalism to counter balance it.

: Having had a job in a hospital when abortions were performed as D&C's
: (Dustings and Cleanings) and the local unwed mother home was going full
: tilt, I got a chance to see the results of some back-alley jobs first hand
: (at the age of 15). While we are having this tidy little debate about
when
: life begins, etc, desperate women will be dying alone in a pool of their
own
: blood. Because all of the opinions, laws, amendments, pronouncements, etc
: by all of the males and overage women are of little help to a young,

scared,
: pregnant woman and haven't been for 6000 years. We're Number One. Yeah,
: right.
:
: Dick McCollum N0BK (replies to rec.radio.amateur.policy only please)

Banning anything does not get rid of the easy access to that activity.
Drugs, alcohol, abortion or guns can not be banned. There will aways
be access.

6065. Re: range vs. watts?

Newsgroup: rec.radio.cb
Date: 2000-03-24 00:00:00 UTC

>Sorry, ummmm, tnom (No signature) but you're wrong. I'll bet ya 500
>bucks right now that you can't be heard 32 miles in say, West VA,
>unless you're transmitting from one end of the valley to the other.(I
>was guesstimating his AVERAGE range in hilly country mobile)

A hilly average is the average elevation of those hills. A signal
average would also be the average signal on these averaged
elevations. If you can't be heard 32 miles away with 250 watts
on you average elevation then you have a problem.

>>>You need to triple your power to gain an "S"unit, and thats
>>>geometrically. (4 watts=1 s unit - 12 watts=2 s units - 36 watts=3 s
>>>units and so on)
>
>>You need to quadruple your power to gain one S-unit. Each S-unit
>>equals 6db.
>(N4ZN)->
> RF follows the same rule as candlepower in strength increase....
>ever heard of the law of thirds? Ever wonder how it got its name?

Go back to the books. One S-unit does represent 6.db. I can quote
if you like, but it would be easier if you'd look it up yourself.

>>>So, you see it doesn't take long to get up to 250
>>>watts ! In fact at this rate, we didn't pick up but about 3 1/2 s
>>>units under *ideal conditions* (that hill top in a vacuum, no rain,
>>>clouds, dust, trees, other hills, pollution, bird shit, etc.)

>>I agree that you don't gain as much as one might think.
>
>Well, we agree on something, anyway. The amateur manufacturers of
>amplifiers will even state that going fromm 100 watts to 1500 watts
>only gives you 2 - 3 S units of gain. And Henry Radio states in their
>spec a 10 Db gain.... that's going from 100 in, to 1500 out.

A 10 db power gain is a multiplication factor of 10. How do you get
10db is..... 100 compared to 1500? That's 11.75 db, not 10.

>So, you
>may not believe me, but better write them and tell 'em they're wrong
>before somebody sues 'em for false advertising.

They, and you, are wrong if you believe 10db represents a power ratio
of 15.

Therein lies the crux of the motivation here - as a punative measure
against those whom they selfrighteously declare practice this "careless
and irresponsible" activity; to punish by usurping their personal rights
and freedoms; to legislate and impose their morality on someone else.

Reminds me of when Jerry Fallwell debated Carl Sagan on Nightline.
Fallwell was forced to speak in "tongues" on the issues. Among the
biggest piles of nonsense ever shown on network television.

says...
>
>Does anyone remember the Demco CB Radio?
>Does anyone have one they want to sell?

I remember various Demco models... the Satellite, Super
Satellite, Travelier, etc. Boy, those Super Sat's had
some serious audio on transmit!

You can find a few pictures on the Retrocom on-line CB
radio museum at http://www.retrocom.com

I see them up for auction from time to time on eBay,
but as you might expect, they fetch a high price. You
can use the search capabilities to find them. Get into
the CB radios category and use the search box at the
top of the page to look for they word, "demco".

Birth control is accessible and inexpensive in America. Women who
have an unwanted pregnancy, other than by force, are careless and
irresponsible. This is certainly an issue for society as a whole
because of the high probability that such behavior will be paid
for in some manner through individual taxes. Further, it is a
civil rights issue. Americans have the right to life as stated in
the Constitution.

In insisting that abortion be completely unregulated and "on
demand" you have imposed your moral convictions on the remainder
of society. The issue is society coming to some consensus as to
when human life begins.

I'll ask you. Are you wise enough to determine, definitively,
that an abortion does not end a human life? Can you state with
certainty when human life begins? Toss aside your political
affiliations for a moment and think about this.

I suggest that if you are going to jump into this debate that you
at least go back and read the preceding posts, in whole, not as
edited by successive posters.

It depends entirely on the charger you are using. Some will stop charging
when the battery is fully charged, and some don't. The ones that don't could
damage the battery. BTW, a car battery is not the best choice. They are
specifically made to produce a short burst of high current to start the car
motor, then be quickly recharged. A deep cycle battery is a better choice.

Your post has appeared here in it's entirety once already. Why do you feel it must appear again? I do not care to respond to all of it, or include text that I am not responding to. You made the remark, and I quoted it and commented on it. I believe the root of the Pro-Life movement stems in no small part from prejudicial attitudes like the one expressed therein.

> questions?

We are supposed to abide by the laws of the land. These laws define
a "person" and define when "human life begins". If they are wrong,
get them changed. But until they are changed, that is the *standard*
everyone must use if they are to communicate in a valid manner. A
word means what it is defined to mean. What you and I would prefer
words to mean, as my late uncle used to say, "doesn't amount to
a hill of beans."

This discussion is not about abortion. It is about the meaning of
words. You are using words incorrectly. I would vote for a new
legal definition where a "viable fetus" is legally treated as
a "person" and is therefore covered by the murder/manslaughter
laws. But until that happens, a fetus is NOT legally a person,
by definition.

> Are you sure, beyond all uncertainty, that
> someone isn't being unjustly killed in an abortion?

It doesn't matter what you and I believe if we are mistaken about
the definitions of words. The state legally defines the words.
We are forced to use the state's definitions if we want to communicate
in a valid manner. By definition, a fetus is not usually a person.
By definition, killing a fetus is not usually murder. What is so hard
to understand about the definition of words.

When you assign incorrect meanings to words, you are simply
engaging in obfuscation. Surely you know how to express yourself
using valid definitions of words.

I'm an equal opportunity corrector. You needed correction, so you
got it.

>Of
>course, you didn't ask the question, OR provide any answere, so I'll
>let any self displayed ignorance speak for itself.

I believe I have answered the question quite well. At least more
accurately. Perhaps you forgot to read my answer. I will post
it here once again.
****
All things being equal:

1.Top loaded antennas perform marginally better than base loaded

2.Taller antennas (less loading coil) perform better than shorter

3. Thicker antennas perform marginally better than thinner.

4. More conductive antenna stock makes a marginal difference
over less conductive antenna stock.

5. A higher antenna mount works better than a lower mount.

6. A free and clear antenna mount works better than an obstructed one.

7. A more substantial RF ground works better than a minimal ground.

8. A vertical antenna performs better than a diagonal (windblown).

Number 5, 6, & 8 are the most important factors in the performance of
an antenna.

Now if any one could come up with a formula that includes all of
these factors then we would be able to answer your question. There
is no formula. However we can say this.
The best mobile antenna is a thick stiff nine foot whip that is
silver coated and mounted on top of the roof with multiple radial
grounding points.
No one is going to use the antenna above in the real word, so one

might draw the conclusion that in the real world we might substitute a
102" stainless whip for the best real world performance. WRONG.
The 102" is made of stainless. Stainless has only 3% the
conductivity of copper. This alone will stop the 102" stainless from
being the top performer. Subtract also the fact that the 102"
stainless bends over in the wind and is also a relatively thin
antenna.
So what is the best choice? It appears that for a realistic
antenna, it is a mildly loaded top or center loaded antenna made
of thick conductive materials. There are a few of these ugly looking
antennas around. They do work marginally better than the
102" stainless and have the benefit of being shorter. These
antennas can get as short as five foot and still equal or
outperform the 102" stainless.

Percent conductivity of materials, based on copper being the standard
of 100%

Aluminum 65%
Brass 28%
Chrome 74%
Gold 71%
Iron 17%
Silver 106%
Steel 10%
Stainless 3%
****
> If, and I repeat, *IF* you did any reading (and paying attention)

>(that's a quarter wave on the 11 mtr band) whip before you TRY to
>correct me? THEN...

That is not what you claimed. I will quote you.....

"At the risk of getting flamed (who am I kidding, it's inevitable),
the best *overall* antenna is the 102" SS whip."

Does not the SS stand for stainless steel? If you are NOW saying that
a 102" whip can outperform a loaded antenna then I will agree. But
you were referring to something else.

>you can come back and TRY to give a reply to the
>question raised in the post.

I believe that I have done that.

> I don't think that the poster asked for ANY of what you offered.
>(which was NOTHING btw)

I think most readers of these posts would prefer accuracy. Therefore
corrections should be made when someone is in error.

Ken,
As stated before, it depends on the particular charger you have. If it 'says' it has a sleep mode, okay. If it doesn't say it has one, then I would assume it doesn't, and turn it off.
Just as a hint, put the battery in a 'battery-box'! Much better than cleaning up an acid spill or over charging and blowing the caps off (if your lucky).

Strider wrote:
> Your assertion that an unborn baby is merely a fetus is just
> that, your assertion.

You are completely missing the point. Stop emoting long enough
to realize it is not *my* assertion. It is the assertion of the
standard for the English language. From Webster's:

"fetus - an unborn or unhatched vertebrate."

Is an unborn baby "unborn"? - Yes. Is an unborn baby a
"vertebrate"? - Yes Therefore, an unborn baby is a fetus.
There is no argument possible! Words mean what words mean!
If you don't like the Webster's meaning of words, feel free
to invent some new words.

If we were speaking two completely different languages, we
would not be communicating. That's what you are advocating -
changing the standard definitions of words until no valid
communications is possible. This discussion is NOT about
abortion. It is about whether you are free to change the
meaning of words from the standard of the English language.
You are simply not free to do that without changing the
dictionary.

> This is the issue. You see no problem killing a fetus. I am
> disputing your assertion that an unborn baby is merely a fetus. I
> am asserting that, at some point prior to birth, it becomes a
> child.

Well, you are mistaken, by definition. Go get the legal definitions
changed if you want to. Until that change occurs, you are just
mistaken. It appears that you emote to such an extent that you
are incapable of logical/rational thought. If you refuse to
accept the dictionary definitions for the English language, then
no valid communications is possible.

> I adamantly refuse to reduce this discussion to any lower grade
> level to satisfy your continuing obstinance. You use whatever
> language you like to make your point and so shall I.

That's the problem. I am using English. You are not using English.
It only appears to be English thus leading to obfuscation. Thus,
nobody can or should take you seriously.

> As stated, it is my belief that, at some point before birth, the
> unborn baby becomes human and therefore entitled to all the
> rights and privileges protected by the Constitution.

The law says that's false so you must get the law changed for
it to be true. When you get the law changed, only then will an
unborn baby be legally a person. Saying an unborn baby is legally
a person presently is incorrect. What about that is so hard for
you to understand? With thought processes like yours, I am assuming
that you are not a man of science.

>>may not believe me, but better write them and tell 'em they're wrong
>>before somebody sues 'em for false advertising.

>They, and you, are wrong if you believe 10db represents a power ratio
>of 15.

Well, I believe that we BOTH may be wrong to SOME degree. I was figuring it up in dBi, which doesn't work in the real world. It would take 20.1072386 dBi of gain to equal 250 dBW, where your figure of 18 dBd is closer at 252.38294 dBW.

And Henry radio DID claim a 10 dB gain, but that's their problem. I'de like to see you post their response here if you care to write them about it. I'm sure they will have an explanation.

But your last figures on the 10dB gain of 100 watts to get to 1500 dBW is a bit low. It would be closer to 11.76 dBd of gain. 11.7609126 to be EXACT. And if you really want your socks blown off, the ERP is STILL only 31.760912599999997, and the EIRP isn't much better than that at 33.90935108047697.

So see, I'm not the idiot that you *may* have been trying to make me out to be. Just a silly slip of the reference.

But I think we're getting away from the origional thread. I don't know where you live, but I've operated in W.Va mobile, and 250 watts doesn't do a whole lot for you. It *is* alot better than 4 watts though, don't get me wrong, but it won't work miracles. RF still doesn't like to travel directly through dirt, rocks, vegetation, etc. You can't directly impose the mean hight above sea level table onto your actual antenna height above ground and have it work. You STILL have the remaining turf above your antenna elevation blocking the signal.

I think the BEST thing he could do is operate SSB, if not already doing so. Agreed?

: > you have. Your violent nature can only serve your own
: > destruction.
:
: These are the same words that England used to threaten the Colonies about
: 224 years ago. Didn't work then; won't work now.

As with the early Contintental Army, most Americans do
not have the training or the discipline needed to take on
a major military. Your only saving grace is that most of
us in the military and in law enforcement share many of
the same beliefs you do. The biggest exception is that
we are not as paranoid as we deal with government daily
and understand how ineffective it can be.

: > Am I a cop? No I am not. I happen to be in the Army.
:
: Big fucking deal. All that means is that I PAY YOUR SALARY. I am your
: *boss.* You work for _me_; not the other way around.

No, you pay taxes. The politicians are our bosses. And they
pay our salaries out of your tax dollars. And they have the power
to force you to pay.

Nor do we protect you. Our oath, both for the military and law
enforcement, is to protect the constitution (the system). People
(civilians) are expendable. It is your responsibility to protect
yourself. The USSC has so stated.

: > I have
: > dedicated my life defending this country from "All enemies, both
: > foreign and domestic." If you are preaching the violent
: > destruction of the country, guess which one you are?
:
: Put your money where your mouth is, or shut up.

And you are acting like the left-wing extremists. Don't
step over the line and become an enemy of the people.

: > I hope you end up in jail and pinned to the wall by your
: > roommate Bubba.
:
: I don't give a good goddamn what you want, or what you think, anymore than
I
: care about which of your roomates ass you had your dick in last night.

I think he was referring to your potential roomates.

: > The justice system we have works very well, and
: > it has systems in place to change laws you don't agree with.
:
: Right. The justice system works SO WELL that Governor Ryan of the State
of
: Illinois has just had to shut down Death Row because about 50% of the
: inmates killed over the last number of years here were found NOT GUILTY
: after going to their graves. Works *real well.* Just ask OJ. He'll tell
: you.

That is because those of you in Illinois have allowed the
corruption up in Chicago to fester. A corrupt liberal mayor,
who has forbidden the owning of guns who then has a
police force that murders unarmed blacks.

It is within your own hands to clean up that mess.
The rest of us have a fairer justice system in our
states.

At least our judges are not being sent to jail.

: Why
: > don't you try it instead of talking about killing innocent
: > people.
:
: BECAUSE Supreme Asshole, those *innocent people* don't have a VOICE !
What
: they do have is a Silent Screem, that can only be visualized on an
: ultrasound monitor.

You are sounding like a left-wing extremist of the '60s.

: If oyu are unsuccessful in changing a lwa, it is because
: > the MAJORITY of people don't agree with your OPINION, and
: > therefore, it shouldn't be forced on them.
:
: The innocents depend upon those of us who can be characterized as HUMAN to
: speak for them. They have no voice of their own. If they _did_, I'm sure
: the first words out of their mouths would be:
: PLEASE DON'T KILL ME !

So? How many people have you invited to
church? Convert people, don't go to war
with them.

: If you want to live
: > in a place where the will of a small number of people can be
: > forced on the entire population, then you shouldn't live in this
: > country. A place like China, or Russia shares your views that the
: > will of a small minority has the God given right to enforce
: > there will on the rest of the country.
:

: Precisely because you would LOVE this Jew to leave, is the reason I never
: will. I will remain a bloody thorn in your bloody smelly ass for as long
as
: I can breath. And even after that. I consider it my Patriotic Duty to
: drive to and your kind to extinction.

Ah, the culture wars.

6087. Re: range vs. watts?

To somewhat answere your question....

depends if you're on the hill, or in the valley. I'de say rough estimate on the average under NO NOISE CONDITIONS would be 5-8 mi. And surprisingly enough, the amp will help, but not as much as you'de think. Maybe would double your range (on the average). But, hill is another story all together. Local communications are pretty much line of site, a little over the visible horizon on 11 meters.

You need to triple your power to gain an "S"unit, and thats geometrically. (4 watts=1 s unit - 12 watts=2 s units - 36 watts=3 s units and so on) So, you see it doesn't take long to get up to 250 watts ! In fact at this rate, we didn't pick up but about 3 1/2 s units under *ideal conditions* (that hill top in a vacuum, no rain, clouds, dust, trees, other hills, pollution, bird shit, etc.)

>> Before you buy.

Scott Scott Scott..... where do you get your info from? True, a
center loaded, better yet- top loaded - antenna will perform better
than a base load. Superior radiation efficience, bandwidth, and
resistance match. But base loaded antennas will still do a fair job.
Especially on such a narrow band as the *legal* citizens band. Alot of
the performance factor depends on each individual installation.

At the risk of getting flamed (who am I kidding, it's inevitable), the
best *overall* antenna is the 102" SS whip. No load, very forgiving
power handleing capability (more limited by the feedpoint integrity)
excellent bandwidth (as Q is given up by a unity gain figure from a
quarterwave). But I think you'll find in mobile installations, that
the increased capture area/radiating surface area far exceeds the
peformance gain claims of alot of the new *super-dooper* antennas out
on the market. Market=Marketing..... in otherwords, if we tell 'em
it's new and improved, it's gotta be better. Now, don't get me wrong,
in certain instances/installations something else will out shoot the
quarter wave. I'm just saying on the average, the 1/4 wave will have
the better average performance. Ask a ham what he runs for 10 meter
mobile. Bet it's a quarterwave.

So..... *I'de* run (and do) a quarterwave. ie: 102" Stainless whip,
or check out www.hamstick.com click HF then 6-75 meters.
Bet you won't mind the price either!
(remember the word for the day? -MARKETING-) Lot's of
companies have taken advantage of the fact that no technical knowlege

is required to legally operate on the 11 meter band.

>>clouds, dust, trees, other hills, pollution, bird shit, etc.)

>I agree that you don't gain as much as one might think.

Well, we agree on something, anyway. The amateur manufacturers of
amplifiers will even state that going fromm 100 watts to 1500 watts
only gives you 2 - 3 S units of gain. And Henry Radio states in their
spec a 10 Db gain.... that's going from 100 in, to 1500 out. So, you
may not believe me, but better write them and tell 'em they're wrong
before somebody sues 'em for false advertising.

Absolutely no offence intended to the CB community, BUT:
In stead of always worrying about trying to get something for nothing
(IE the LITTLE gain you would get from such a set-up), why not put
that time and effort (quite possible money) into a decent antenna,
quality coax (NOT the radioshack stuff), and a quality radio (again,
not R/S). You will get much more enjoyment out of the hobby.
And for God sakes man, do NOT use a freekin roger-beep or echo box!!!

I am not running a Radio shack coat hanger nor Roger beep or echo. So Mr Frost are you my Elmer now? HI HI. Thanks for your reply. I did not ask if it was worth doing. I asked is anyone out there useing this system and can a out of phase system produce ANY gain.

Ok lets try it this way. Is a out of phase mobile anttena system like the the set up used on stacked array antennas useing a balun type feed line to the antennas. Am I close? If not, what is it? how can it produce gain?

Thanks Bean

Thanks to Dean Helphill for replying to my message about Demco radios. The link he sent me for http://www.retrocom.com/ gave me several minutes of great nostalgic remembrances for all thingsCB I recall from 25+ years ago. Especially my Gizmotchy beam.

One thing I didn't see anything about; there was a guy, I think he was from Canada, who released several recordings of CB Songs. The only one I remember very well was 'Don't Let Them Tear My Little Old Skip Shack Down' there were a few about the DOT [as I recall back then CB radio was governed by the DOT in Canada].

If anyone remembers these or better yet has them on mp3 or other electronic files are you willing to share? The were hilarious!

Good post, except for the item above. The width of a frequency allocation of
440 KHz is simply a co-incidence. It has nothing to do with a 455 KHz IF.

Changing cable length has no effect on SWR but it does change the reading therefore the SWR meter is reading something besides SWR. It is not correct that they read VSWR, this implies that they are only sensitive to voltage. In fact they are sensitve to both voltage and current which could be taken as power or IMPEDANCE. P=IE or R=E/I. Whether it is impedance or power is just a matter of point of view, the numbers work out to be the same. You can even manipulate the numbers so it appears to be VSWR. This is because SWR can be calculated if you know the difference in impedance of the load and impedance of the line, currents at the current nodes and anti nodes or voltages at the voltage nodes and antinodes or forward and reverse power.

If you were actually taking a legitmate SWR measurement the value would appear to be the same no matter where on the line you took it and all the cable trimmers would be out of business. It is actually good that the meters do not

read SWR as it is realitivly unimportant unless it is faily high. What is more important is the impedance that the transmitter sees or at least the relative match thereof. I was actually trying to convey that the meter shows the ratio of this mismatch of impedances rather expressing it as an impedance meter. Unfortunately it does not show the mismatch between the source and load or in real cases the source and impedance seen at the input to the line. What it does show is the ratio of the design impedance of the meter to the input impedance of the line. This does not mean that the SWR meter is not useful for matching the impedance of the TX to the line / load. The indication of this match is maximum forward power.

If the 3 is at full scale I would junk it. The 3 should be at about midscale. It should have two jacks marked Antenna and Transmitter or something that can be interpreted as such. Comnnect the transmitter to the transmitter and antenna to the feedline going to the antenna. put the control to forward and transmit. While transmitting adjust the cal knob for a full scale reading. Quit transmitting and set the control to reflected. Key the transmitter and the reading will indicate the ratio of impedance mismatch between the antenna/ feedline combination and 50 ohms. Under the right conditions this may be interpreted as SWR.

6109. Matcher Question

Newsgroup: rec.radio.cb

Hey guys thank you for all the responsed to my range vs. watts question. I got a new swr meter (so I don't have to borrow one) and it has a feature that I am not familiar with. A matcher.....the manual explains how to operate it (setting the load and tune buttons to obtain the least swing of the meter) but I still don't understand what it does. If someone could enlighten me on what this feature does I would be grateful.

Also, is it a good idea to leave the meter inline between the antenna and cb?

Source record: 28630

There was a middle-aged couple who had two stunningly beautiful teen-aged daughters. They decided to try one last time for the son they always wanted. After months of trying, the Wife became pregnant and sure enough, nine months later delivered a healthy baby boy. The joyful father rushed to the nursery to see his new son. He took one look and was horrified to see the ugliest child he had ever seen. He went to his wife and said that there was no way that he could be the father of that child. "Look at the two beautiful daughters I fathered." Then he gave her a stern look and asked, "Have you been fooling around on me?" The wife just smiled sweetly and said, "Not this time."

The Second Affair

A mortician was working late one night. It was his job to examine the dead bodies before they were sent off to be buried or cremated. As he examined the body of Mr. Schwartz, who was about to be cremated, he made an amazing discovery: Schwartz had the longest penis he had ever Seen! "I'm sorry Mr. Schwartz," said the mortician, "But I can't send you off to be cremated with a tremendously huge penis like this. It has to be saved for posterity." And with that the coroner used his tools to remove the dead man's schlong. The coroner stuffed his prize into a briefcase and took it home. The first person he showed was his wife. "I have something to show you that you won't believe," he said, and opened his briefcase. "Oh my god!" she screamed, "Schwartz is dead!"

The Third Affair

A woman was in bed with her lover when she heard her husband opening the front door. "Hurry!" she said, "stand in the corner." She quickly rubbed baby oil all over him and then she dusted Him with talcum powder. "Don't move until I tell you to," she whispered. "Just pretend you're a statue." "What's this, honey?" the husband inquired as he entered the room. "Oh, it's just a statue," she replied nonchalantly. "The Smiths bought one for their bedroom. I liked it so much, I got one for us too." No more was said about the statue, not even later that night when they went to sleep. Around two in the morning the husband got out of bed, went to the kitchen and returned a while later with a sandwich and a glass of milk. "Here," he said to the 'statue', "eat something. I stood like an idiot at the Smiths' for three days, and nobody offered me as much as a glass of water."

The Fourth Affair

A man walks into a bar one night. He goes up to the bar and asks for a beer. "Certainly, sir, that'll be 1 cent." "ONE CENT!" exclaimed the guy, the barman replied "Yes." So the guy glances over at the menu, and he asks "Could I have a nice juicy T-Bone steak, with chips, peas, and a fried

egg?" "Certainly sir,"replies the bartender, but all that comes to real money." "How much money?" inquires the guy. "4 cents", he replies. "FOUR cents!" exclaims the guy. "Where's the Guy who owns this place?"The barman replies, "Upstairs with my wife." The guy says, "What's he doing with your wife?" The bartender replies, "Same as I'm doing to his business."

The extra power helps a mobile a lot more than it helps a base. Usually with a base you are just dealing with line of sight. On a mobile things get a lot more complcated as ther all sorts of things to reflect and absorb power and the extra power can make more of a difference. Of course the guy on the other end is going to have to put out as much or more to talk back. I know I regularly talked about 50 miles base to base with both stations using an omni antenna on 50 watts. When I was using 2KW the range only increased by maybe 10 miles but I was a lot louder and clearer at the 50 mile station. With the 50 watts switching to beams made it so I could talk to some of the 4 watt stations at 50 miles and had little effect on me getting out further. None of this "testing " could be considered very accurate and should be taken with the usual salt. I guess the best indication would be the map I used to keep with all my contacts marked on it. There was roughly a 50 mile ring around my station filled in then not much of anything out to about 300 miles where the contacts started again. In the ceneter hub furtherest range was about 100 miles and in the ouside skip area the closest was about 200. Didn't really seem like power made a whole lot of difference in the long run. If I could talk to them on 2KW I could usually talk to them on 4. I know there were some where this did not apply.

Yes, indeed. It makes many arguements impossible. It precludes wiggle room. It also precludes the loss of an argument when your opponent is armed with the facts.

This is what happens when students are allowed to dictate to the colleges what courses will be offered, and how they will or will not be taught.

When I was at University, the student body protested the mandated requirements on the curriculum for new students. At issue were foreign languages ("I'm never gonna use that,"), the sciences ("what the hell is that for? I'm gonna be a writer, why do I need Organic Chemistry"), logic ("yeah, like anyone ever uses THAT in everyday life"), and mathematics (who CARES about Analytic Geometry, I'm going to be a Doctor"). As a result, we have a superfluity of 'don't know, don't care's' arguing emotionally by shifting the language to encompass the feeling du jour to absolutely PREVENT a clear understanding of the issue, aguing in absolute ignorance of any factual content--the Dilbert "What I don't know or understand can't possibly be important, therefore may be accomplished in no more than 15 minutes without argument" theory of productivity.

Sad thing is, there are more of them than there are of you. Not just on this issue, but on most.

In San Diego, $100 installation, and $46/ month. Will not go back to a standard phone modem again. Besides a T1, it is the most reliable service I've ever used. You leave your PC on all the time, 1 click and the page suddenly appears. Virtually no wait.

Anonymous,
Thats not an easy question to answer because different
model cars require different 'cures'.
Chokes inline the power lead, and alternator output.
Filter caps to ground off power lead, alternator lead,
across all electric motor power leads, radio power lead,
etc. Ground the body parts(panels) to the frame, the
motor block to the frame, anything metal, ground to the
frame.
If it's a late model car/truck, run all power leads,
and coax on the side away from the computer module. On
cars with fuel pumps in the gas tank, by-pass AT the
fuel pump power lead(drop the gass tank to do it).
That ought to get you started, more when you get that
done (lol).
'Doc

Mark,
By the name of it, and by what you described, it sounds like you have an antenna tuner, antenna matcher, along with an SWR meter. Sounds handy!
I seriously doubt if leaving the meter 'in-line' will make the slightest difference.... just don't go over the power limit of the meter.
'Doc

Message-ID: <uV1D4.31303$oc.648763@news5.giganews.com>
Source record: 28755

Here are some suggestions.

First disconnect the antenna from the back of the cb. If the noise goes away the noise is being transmitted through your antenna system.

Check your swr. If your are not running a magnetic mount you might look for corrosion. If all checks out good here then move your coax around from its current run location.

If the noise is still there then you will have to buy RF filters to put in line with the offending noise. This may pose a problem. You must weigh and decide if the fuel pump noise is tolerable. I can't see for the life of anyone why they would want to drop a gas tank to get noise out of CB.

Swr if high will amplify the noise. Getting this under control will quiet the decibels of the noise. Not entirely talk it out.

If the noise is till there when you disconnect the antenna then the noise is likely to be coming from the electrical system. The most common error when trouble shooting noise is the assumption that it is coming from the electrical system and immediately go a get a filter for the power line. Then you are mad because it didn't work. Radio Shack will not tell you to do all this trouble shooting.

When you are done you need to weigh the cost of filtering out the noise against the noise itself and decide whether or not you can tolerate it. When the noise level in the air goes down you will be able to squelch and filter the noise out within tolerable levels with the radio.

That's about all I can tell you on the noise things. Always remember that everything resonates on a certain frequency. A lot of it just happens to be around 11 meters. Good luck. And remember, its just a CB Radio.

Happy CB'ing.

Given your requests.......
Here are som bang for the buck radios that work really well and have the
features you want:
1. Eagle Sidewinder $130
2. SuperStar 3900 $160
3. Texas Ranger 296, 696, 696F $130-155
All of these Can be modified, if you run the 225 with them, make sure you have
the carrier set at 2 watts.

Good point. Lots of good points by all. Only two I didn't see are the
installation of an isolation transformer of a 1:1 ratio (12vDC in =
12vDC out). Another one is twisting the power leads. Kind of like the
firts phone lines (hence term twisted pair). Even better is sheilding
the power leads. Either strip out some old RG8U, and use the shield to
run your power leasds thru, or run 1/2 inch conduit and put your power
leads inside it. Whichever choice you use, bond them both to ground at
both ends.

If I get flamed on this one, I'm quitting!

I don't doubt that enough power will get you there as there will always be some signal scattered over the horizon and the more you put out the more there will be to receive but you will never be able to say that this many watts will get you this many miles once you get past the radio horizon without a lot of qualifying statements.

I've had these in the past, and in my experience about half of them were
bad. Of course, that was many years ago now. They may have gotten
better!

> All of these Can be modified, if you run the 225 with them, make sure
> you have the carrier set at 2 watts.

I've also run Palomar's in the past and had real good luck with them.
Keeping the rig around 2W is EXCELLENT advice! Heed it! My best set was
an original Grant DX (10W final) cranked down to about
2W out. Had the modulation way up, used a D104-M6B mic. I had no problem
making contacts from the mobile off an old Wilson 1000.

There is a lot more to ohmic losses than this. You have to take into account that the the feed point impedance of the antenna is fairly high usualy between 40 and 50 ohms for a 102 inch whip. This impedance very rapidly increases as you go up the antenna to thousands of ohms at the upper end. While copper is much better of a conductor than stainless steel we are still talking milliohms DC resistance compared to the 40 or 50 ohms the antenna offers as a load. Bottom line is that the difference is totally negligable. In other word the difference between using a silver antenna and a steel antenna would be like taking the silver antenna and inserting a 100 milliohm resistor in series with it at the feedpoint. Actually 100 milliohms is an overestimation by at at least one order of magnitude. I didn't feel like doing the calculations.

The phasing of two antennas sends out a DIRECTIONAL signal. The 'gain' is in the direction of the strong signal, and there will be a corresponding weak signal in the 'other' direction. Think of it as a reflector behind a light bulb. A 25 watt bare light bulb sends out 25 watts in all directions. Put a reflector behind it, and you get much more light, but only in one direction. The bulb (or antenna) still only puts out 25 watts, but seems like much more when directed in one direction. Phasing antennas works much the same way.

Hi!

If anyone is interested in some old CB gear, mostly radios good for parts (probably a dozen in the box) along with a couple of D104 base mics (TUG and TUP), and a bunch of other related "stuff", please email me at jlemay@njmc.com and I will setup a time for you to have a look at the hardware.

Everything is at my parent's place in NY, a few hundred miles away, and I'm no longer interested in holding on to everything. I'm asking $200 for everything, primarily to make sure it gets a "good home".

I would recomend a Galaxy Export Radio to begin with. Dont need to modify for freqs and come with more funny stuff.... Yes the 225 for $100 is good. Dont expect it to get you across the world though, they only come with 2 - 60 watt finals. Also be aware of electrical noise in FORD vehicles, Very Bad.

Here is a link to get you started....

When you use out of phase feeds this means most of the signal is going to be radiated in-line to the antennas. If they are in phase they will be broadside to the antennas. Stick two antennas on top of a van 1/8 wl apart and fed them 135 degrees out of phase. Gain is about 4.5 db. You dn't get something for nothing. There will be a big notch either in front or behind you depending on which antenna is leading. this also assumes that both antennas are receiving equal current.

The realities that engineers deal with are quite different from political debate. After all, it's not hard to prove the existence of gravity.

Political debate, as is the abortion issue, is not so nearly well defined as you would like everyone to believe. You continual droning on the definition of the word "fetus" is a case in point. As you pointed out, the dictionary defines a fetus as an more or less an embryo with a vertebrae. While this is technically correct, the definition as unborn child is also correct. One may use the word "primate" as a descriptive term addressing humans as well. I think that like the term "primate", the word "fetus" does not describe our human nature.

The point that remains unresolved is that, at some point as yet undetermined by society, a human embryo becomes a human being and is deserving of certain rights and privileges as such.

I still maintain that your attempt to force me to use you definition of an unborn child as a "fetus", while technically correct, undermines the true value of human life debate. An unborn human child is not merely a fetus, without rights and priveleges of a fetal dog, but it is a human. Humans are protected in this country from murder. The only question that remains is, when does an embryo become human.

I asked you before, W6, is you are wise enough to determine this for yourself. You believe yourself to be intelligent and learned. So, try engaging your brain and tell me when you think that an unborn child becomes human. Don't give me the crap about the Supreme Court decision. That was a purely political decision. This is the jist of the entire abortion debate. I believe that individual viability is the critical point, not when the child happens to emerge from the womb. Prior to that, I don't have an opinion as to the humanity of the unborn child.

In order that I may somehow ease your spastic, anal retentive tendency toward word definition, I define individual viability as the child's ability to live as an independent being, apart from the mother, even if in need of adult assistance. After all, with a strict adherence to individual viability, no child would be completely independent until about age 30.

Then why does phasing sometimes cause a large increase in
omnidirectional gain as in vertical co-linear arrays???

Debbie,
Because in many of the new cars the fuel pump is located
inside the gas tank. To get to the fuel pump to place by-
passing capacitors across the power lead to the pump, you
normally have to 'drop' the fuel tank(By the way, this is
the GM solution to fuel pump noise).

Does your control box have a light that is burnt out . I
have an Alliance rotor box and the same thing happened to
me.. the rotor would turn but I had no indication of
movement on the meter. I thought the box was bad but
decided to try a new bulb just to see what would happen.
Solved my problem, I guess the bulb is some type of fuse..
Give it a try..
Good Luck!!!

Jerry,
You might be right about the splices, wouldn't hurt
to check them. But first, I'd look at the control box.
The problem is present with both rotors(?), so check
the 'other' end of the cable.....control box.

You are mistaken. That *point* has indeed been determined by
"society". You just don't like the point that society has
determined. But that point is political, not scientific, so
you have a chance of changing it. I've already agreed to vote
for a change if I get to vote on it.

> I still maintain that your attempt to force me to use you
> definition of an unborn child as a "fetus", while technically
> correct, undermines the true value of human life debate.

Then you understand absolutely nothing about the engineering
personality. The subject doesn't matter, engineers refuse to
discuss *any subject* until the definitions are agreed to. When
communicating with any scientific sort of person, obfuscation
of the language is not allowed. Sorry, but that is just the
way it is.

There's a guy over on the rec.radio.amateur.antenna group who
claims his antennas perform better than the laws of physics
predict it to perform. That is essentially the same argument
you are using. You two are saying a thing isn't what it is
and/or is what it isn't. Please don't pattern your argument
after Clinton and say, "That depends on what the definition
of 'is' is."

> An
> unborn human child is not merely a fetus, without rights and
> priveleges of a fetal dog, but it is a human. Humans are
> protected in this country from murder. The only question that
> remains is, when does an embryo become human.

Nope, you are mistaken. It has already been determined when an
embryo legally becomes a person. You just don't like it. I don't
like it either but that's the way it is presently.

You have strayed from legal terms again. Of course, a human embryo
is human. Of course, a person is human. But legally, an embryo
is NOT a person, by legal definition. It is impossible to
abort a person, by definition. IMO, a fetus will *NEVER* be
declared a legal "person". There are just too many legal

ramifications for that to ever happen.

My house is dark brown and I would prefer a light tan. Does it
do any good to say my house is light tan? Nope, I have to get
off my butt and paint it. You have to get off your butt and get
the law changed. Until you do, a third trimester abortion is
legal. IMO, if you do get the law changed, it will be a crime
to perform a third-trimester abortion. It will not declare a
third-trimester fetus to be a legal "person".

> I asked you before, W6, is you are wise enough to determine this
> for yourself.

I am wise enough to determine the legal definition of embryo,
fetus, and person. It *doesn't matter* what you and I think.
What we think doesn't change the existing legal definition
of those words. The present legal meanings of the words are
the present legal meanings of the words. Maybe Aristotle can
get that through to you. "A is A". A thing is what it is.

> You believe yourself to be intelligent and
> learned. So, try engaging your brain and tell me when you think
> that an unborn child becomes human.

Human eggs are human. Human sperm are human. A human fertilized
egg is human. A human embryo is human. A human fetus is human.
A human baby is human. A person is human. Unfortunately for you,
"human" is not a legal term.

> Don't give me the crap about the Supreme Court decision.

Read my ASCII. Our discussion about abortion has not begun yet. It
will not began until we agree on a common language. Discussing a
subject without agreeing on a common language is lunacy.

> In order that I may somehow ease your spastic, anal retentive
> tendency toward word definition, I define individual viability as
> the child's ability to live as an independent being, apart from
> the mother, even if in need of adult assistance. After all, with

> completely independent until about age 30.

Now we're getting somewhere. I agree with you. Personally, I think
viability starts at about five months. I would support a law that
forbids third trimester abortions. But, IMO, the law would not
declare a six-month old fetus to legally be a person.

Could be a broken wire in the cable.These rotors are famous for rotten

Could be the wiper in the rotor.
Could be RF.

Subject: 12 nude hams
Date: Sat, 25 Mar 2000 13:38:31 GMT
From: "Burt" <k1oik@yahoo.com>
Organization: Road Runner
Newsgroups: rec.radio.amateur.misc

Twelve hams were about to be licensed. The final
test was for them to line up, nude, in a garden while
a nude model danced before them.
Each ham had a small bell attached to his privates,
and they were told that anyone whose bell rang would
not be licensed because he had not reached a state
of ham purity.

The model danced before the first ham candidate,
with no reaction. She proceeded down the line with
the same response until she got to the final ham.

As she danced, his bell rang so loudly it fell off and
clattered to the ground. Embarrassed, he bent down
to pick up the bell, and then all the other bells began
to ring....

6181. Re: Sigma 4

Newsgroup: rec.radio.cb
Date: 2000-03-25 00:00:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <38DD5897.C2B37B64@qnet.com>
Source record: 28800

Hello David: I have the original Sigma 4 assembly manual, for the Avanti Model AV-174 Sigma 4 antenna, dated 1980. Send me your US mailing address and I'll send ya a copy it you would like.

The original Sigma 4, used only three aluminum tubing pieces to attach to the hoop. The new Halcon use 4 pieces. The sigma 4, hoop support arms where 1/2" x 60" at the base, and 3/8" x 34" sliding into the 1/2" tubing, with 31" exposed, resulting in a total length of 91 inches. Which is just under the length of a 1/4 wavelength.

The Sigma 4 antenna is a 3/4 wavelength antenna, which has a better match as compared to a 1/4 wavelength antenna. In my humble opinion, the hoop assembly restricts the radiation pattern from acting like a 3/4 wavelength antenna, which would have the lions share of the energy radiating up wards (a cloud warmer). Instead it restricts the radiation pattern to that of a 5/8 wavelength antenna, (or trys to) but takes advantage of the easy to match 3/4 wavelength antenna, by using a gamma match.

I had difficulty matching the antenna on the mast. Setting on a heavy duty 40 foot push-up mast at the 11 foot height, I adjusted the match to a 1:1, then raised the antenna, and noticed a drastic change in the SWR. I had to lower the Sigma 4, and adjust it for a higher SWR, to compensate for the SWR increasing when raised up. What a pain the ass! I am not impressed with this antenna.

I have taken a Sigma 4 antenna, and made heavy duty 5/8 wavelength ground plane antenna out of it. No difference now in SWR when the antenna is raised.

Jay in the Mojave

Go with a Zip-A-Volt. Single,double or triple regulators in one case.
double and triples are controlled with one pot. All induvidual regulators
are fused for maxmum durability and safety. all power transistor are
properly heat sinked.
singles $75.00 US
Doubles $150.00 US
Triples-$250.00 US
All regulators deliver up to 14 amps continous field current.

Ok. I am beginning to understand you, I think. Excuse me but it's somewhat like shouting and listening to someone that is submerged in a barrel.

As you read my posts, try to remember to insert the words "I think" or "I believe" in front of every sentence. Et al "(I think) a human embryo becomes a human being and is deserving of certain rights and privileges as such." is such a statement. I am trying to tell you of my beliefs and values, not what is the reality in the legal system now. It seems that quite often my personal beliefs and that of the law and political system differ else I wouldn't be bitching so much.

I think (I remembered to put it in that time) that in order
legally to gain the right to life, it may be that an unborn child
will be given a level of status near as that of newborn baby. I
can see the time in the near future where technology will allow a
3 to 4 month premature birth to complete it's development
artificially. Indeed, it may not be very long that true "test
tube" babies are possible. (I think) some legal status must be
developed soon to cover these babies as (I think) they are
entitled to protection.

Engineers and scientists are a breed apart. We do tend to wear
a kind of blinders that keeps us firmly rooted in physical reality.
Some people, including my ex-wife, say engineers are not human. :-)

If you had said, "I believe the law should be changed to make the
following true ...", I would not have argued with you.

W6 is a *trip* as we used to say.

Here is something for your interesting reading.

http://www.ohiolife.org/index.html

I have downloaded the _entire_ site, which consists of
10 megabytes
= to about 2157 URLs.

I only do this to keep my phone bill down. You can read the site online if you wish, but it is the most cogent, comprehensive, and intelligent discussion of the issues I have yet to come across (besides, of course, the one's presented here !).

Now 10 megabytes is a LOT of information, and I have only read a little of it to date. Being a slow reader, I may never finish reading all the stuff at this one site alone. And I have found dozens of *similar* sites.

Please visit this site to read a little yourself. You can always return at a later date to read more if you want to. Bookmark the site as a *favorite* in your Web browser and you're all set. It answers many of the questions that have been asked here, regarding when life begins, how the Law defines *person* and so forth.

Good reading, and take your time. Comprehension is more important than speed.

I just picked up a madison 8719. I am looking for some power mods
better yet! Does anybody have any good modulation mods. This is whats
been done so far, tr34 upgrade tr24 gone , r126-2.2k r124-4.7k also
retuned L37 L38 got about 5.6 watts rms pep 7.8 ! What can I expect
from the rig. also looking for recieve mods higher gain less noise mods.
Thank Guys

>I would recomend a Galaxy Export Radio to begin with. Dont need to
>modify for freqs and come with more funny stuff..

The least expensive Galaxy with SSB is the 77 for $230. Just so happens it has the same board as the Superstar 3900 for $70 less.
Galaxy's have to be modified for extra's as well as most.
Superstars are prone to poor QC, out of two dozen over the past 15yrs or so, I've had about 4 defects. 3 of those 4 were from H&Y.
You should be able to pick up a 3900 converted and tuned for around $210, the Eagle Sidewinder for about $180, and a Texas Ranger 296 for about $190. Again, that should be converted, tuned, and ready to talk.
If $ is main object, I'd go for the Sidewinder. If you want a few more features, you may look into a Galaxy 77, echo, switchable RB, 10kz slide, lo/med/hi power, more powerful, and an add on active freq ctr is about $60 extra. 77's run about $280 converted, add $60 and get a 7 digit ctr that works tx and rx. Do the same for the 3900 and total investment is $270, but no echo, no variable power, no 10kz, no off switch for the beep.

Source record: 28818

It's worth that to some people. I really like the older turner mikes. The +2 I have is loud and crisp, not tinny and doesn't pick up a spider farting like a D104 does. The +2 works better for me on SSB than the +3 which is too bassy for my voice.

6200. FS: HR2510 (very clean)

If you're going as far to buy ther counter, you may as well buy the connex dx4800.
It keys more, has cleaner mod, 6 digit counter, 6 or 12 bands, and hasbetter receive, much better. Will key 7-8 watts right out of the box, can be modded to peak more than the Galaxy 77.
<<<<<<<<<<<<<<<>>>>>>>>>>>>>>>>
The least expensive Galaxy with SSB is the 77 for $230. Just so happens it has the same board as the Superstar 3900 for $70 less.
Galaxy's have to be modified for extra's as well as most.

In the early 60's it was mostly businesses that used 11 meters in my area (tow trucks, small business vehicles, etc.). It wasnt until about 1965-6 that the public and commercial truck drivers took over the bands. Originally the truckers were scattered througout the 23 channel band however in the late 60's Channel 10 became the regular "trucker" channel. The expansion of channels in 1976 came about because of the boom of the hobby that was prevelant at the time. The truckers moved to CB channel 19 and the rest is Rock n Roll.

51 has a good point that I overlooked, I guess because I haven't had alot of
luck with this radio. There is a couple other options such as a RCI2950,
AM/FM/SSB freq ctr (passive), memory, and split channel for about $280
converted and tuned, or I saw one special with a RCI RG99 and external active
freq ctr for $260, but I don't know how long that'll last.

The rule says nothing at all about having to have a radio. If you have
an amp, it is presumed that you have used it, and that is illegal. If
you are caught with a kilo of cocaine, the judge isn't going to believe
you when you say it was just for personal use. Bottom line here is that
it appears that the FCC is geting after the amp retailers, and as Martha
Stewart might say, "that is a good thing."

6221. Do you want your Johnson500 to look like new???

Newsgroup: rec.radio.cb
Date: 2000-03-26 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000326103622.13649.00001797@ng-cp1.aol.com>
Source record: 28840

Dear Johnson 500 owners,
I ran into a gentleman (Dee- W4PNT) at the Timonium hamfest this weekend that refinishes Johnson Rangers and Valiants. His work is excellent and the finished product actually looks better than original. The silkscreening looks great and the color match seems to be right on! I asked him about doing my 500 but he said that he needs to do a minimum of three to start doing 500's. His work does not come cheap (Its a bargain if you know how much time and detail goes into refinishing one of these things) but the end product is well worth it and it will only enhance the resale value of your $1500-2000 dollar radio. I would like to get mine refinished but I need two (or more) other willing 500 owners to take the plunge. If you are interested and not shy about spending a few bucks to make your 500 look like new email me.
Thanks very much,
Jim

I guess next they are going to be like gun lobbyist and start sueing the manufacture for the illegal use of their product. But I can see the good side of that. I can sue them because a dummy was tweaking his while driving his ford and rammed me in the rear. Maybe I could go after ford too. Then I could buy me a big radio and keep the chain going. Then everybody would be rich untill all the manufactures are out of business. But then their would be nothing out their to buy
because everybody would be afraid to make anything and getting sued. Sense this is getting off topic I will stop here.

I got a better solution. Radio Shack makes a Noise filter, get the 20 amp version. has a ground wire and red one to go to power source and a blue one for the equipment to hook up to. mainly for car stereo stuff but works wonders on CB stuff too... if you need the part # I can go get it off the dash of my car. (the original box) and tell you what it is. works great!

In my area it was pretty much the same,first users were ranchers,tow trucks,and loggers,early 60's everyone got involved around here, if you lived more than about 300' off the regular phone service it was to darned expensive to have a line run ,geez, something like $1100. for me and my neighbor just down the road had service, so the good ol'CB got lots of use all over rural WA. state until about the time the 40 channels came out, phone company lightened up on service charges about that time , but of course a lot of us were hooked on radio too! Around these parts the legal calls were on channel 11,most folks got bored real soon with the legal formalities real soon ,an example is getting a letter from the FCC for some trivial mistake as not clearing a channel properly or talking more than 5 minutes,or any other of the numerous possible violations,and of course every community had its self designated,FCC,suck up type,that tried to control radio in there area,that of course went astray in my area when a number of the local's[ranchers,business owners, and others], formed a very notorious Jeep Club, about 63,all started running channel 14, and using handle's, and were well known for there all night beer drinking runs in the Cascades,you can imagine the radio coming alive with wive's calling for hubby's up on the mountain, lol, about the same time,ex tug boater's around Everett WA. had some real big radio's,yup I think they would make it over a bunch of the RF on the bowel , point of all this is that , folks found it a damned sight easer to just key up and talk,very simular to free banding today, than to risk getting pegged for petty violations, the legal talking folks were prey for fcc violations while the others getting drunk on the radio and playing with a couple of KW's went unscathed,sounds pretty damned familular doesnt it?,"The RF Carrier" <rfcarrier@my-deja.com> wrote in message news:8bl386$519$1@nnrp1.deja.com...

>one order of magnitude. I didn't feel like doing the calculations.

I agree that the difference is very very small, but it is still
measurable.

Contrast thIs small difference to the large difference in convenience
when comparing the nine foot SS whip to a five foot antenna.
The "GAIN" in convenience is great. Especially if you can beat or
match the nine foot SS antennas performance gain. If you can do this
then you truly do have a lot to "GAIN".

My first trip down that big road was in 1971,everybody ran 17 north and south on I-5, still the same today, 19 east and west out here in WA. state, but how did it all start that way, in the early days there used to be a lot of folks that ran 17 to help truckers, but not near the case today, more in the South Seattle area and Tacoma seem to be there with one purpose and thats to hinder them, but one of you older timers thats ran I-5 in the 60's ought to remember how it all got started ??????

Given your requests.......
Here are som bang for the buck radios that work really well and have the
features you want:
1. Eagle Sidewinder $130
2. SuperStar 3900 $160
3. Texas Ranger 296, 696, 696F $130-155
All of these Can be modified, if you run the 225 with them, make sure you
have
the carrier set at 2 watts.

BZZZTT! Wrong.
It is a coil/capacitor combination in the form of a pi filter.
You cannot put DC through a transformer primary and get voltage
on the secondary, unless it's pulsed DC.

With 2 watts in it sounds clean. With 5 watts in you sound "driven".
I guess the more watts, the better. You will not see a significant
increase at the receiving end driving with 2 or 5 watts. Make sure
your radio has a lot of "swing". Swing is only good for a linear.

I have used CB for years, but just got a couple of FRS hand helds that work better for what I use CB for, ie between my RV and my wife following along in the car. I have heard that GMRS and FRS share some frequencies and was wondering if getting a GMRS license and radio would also let me use the hand helds as well as having a slightly higher powered rig for local base/mobile/handheld communications.

YOU tell dem HAMBO's !!!! Actually the REAL question is this:
Is a place named "Cellular Systems" really sell CB's & linikers? I
DOUBT IT. They sell dem commy cell phones (CB's) up on 869-890 mc ! Does
anyone out there see any cell phone dealers with ANY CB stuff in them, other
than the old guys that work there that use to distrubute CB stuff? Also the
question isn't "when is the fcc going to "clean" (CB clensing) the
newsgroup," but when is Hillary going to clean out NY of ALL Americans ?
(what do you think of that, Ice man?)?
Dave!!!!

OEM wrote in message ...
You moron, it's not illegal to own them, just to operate them. Just another
lame ham operator trying to put a scare into cb'ers, go get your own news
group.

I suppowt da cops, but I like the idea of smashing a "global economy" which is what God is going to do anyway!!!!! Dave !!!!!!

copsupporter wrote in message <277d493f.c304afec@usw-ex0105-038.remarq.com>...
Sure LG, that is obviously the intelligent solution. Let's throw out the supreme court....Hey while we are at it, let's get rid of all the courts....Oh yeah, the police too. Hmm, while we are shredding all the things that make this country a free and civilized society, we'll get rid of all the politicians, the presidency, and dissolve the senate. Lord knows the anarchy and chaos that you seem to be preaching will be much better. No one will be able to work because we will have to stay at home and protect our property from roving bands of violent pillagers, and we we could collapse the entire global economy. Yeah, that makes sense, let's destroy the world as we know it because YOU don't agree with a decision from the Supreme Court.

You are what's known in technical terms as a moron. You don't throw out an institution that has helped shaped this, the greatest nation on earth, for over 2 centuries because you disagree with a decision. You use the systems in place to change it.

That "small minority" does NOT have any God given right to put it's will on the majority. It is happening here. A small bunch of 300 "thugs" really controls the US & world. Maybe less than that. The Bible says "The Rich rule over the Poor."
Dave!!!!

copsupporter wrote in message <035bb113.d6c79322@usw-ex0105-038.remarq.com>...
You need to get some help for the severe emotional disturbance you have. Your violent nature can only serve your own destruction.

Am I a cop? No I am not. I happen to be in the Army. I have dedicated my life defending this country from "All enemies, both foreign and domestic." If you are preaching the violent destruction of the country, guess which one you are?

I hope you end up in jail and pinned to the wall by your roommate Bubba. The justice system we have works very well, and it has systems in place to change laws you don't agree with. Why don't you try it instead of talking about killing innocent people. If oyu are unsuccessful in changing a lwa, it is because the MAJORITY of people don't agree with your OPINION, and therefore, it shouldn't be forced on them. If you want to live in a place where the will of a small number of people can be forced on the entire population, then you shouldn't live in this country. A place like China, or Russia shares your views that the will of a small minority has the God given right to enforce there will on the rest of the country.

Johan, Blake, all the rest of you Thumbs Uppers,

You are cordially invited to my Wake when N9NWO gets through with me.

America's Dirty Little Secret is out of the bag.

Body count so far:

About 35,000,000 dead, since the Supreme Court gave permission to kill the unborn. Throwing my bones on the *pile* won't make any difference, not even to me.

Ever see that movie * Dead Man Walking * ??? That's me. I came up off the operating table twice already, when I should have / could have been shipped off to the morgue instead. I keep trying to tell people, you can't kill somebody who's already dead ! But they don't listen. :-)

Dave!!!!

John Cooper wrote in message ...
The Welsh Amateur Radio Exhibition.
Incorporating Computing & Internet.

Our next exhibition will take place on Sunday 26th March 2000 and it will be the best yet!

This year we will be featuring, centre stage, our 'Multimedia Shack' presentation with live demonstrations of computer aided station management, computer rig control, scale models of AMSAT satellites, 'live' fast scan TV and many digital modes including 'live' APRS presented by Kenwood UK.

Using state of the art equipment including multi video projection units this will be a show no serious amateur should miss!

We shall be returning to our original venue, the newly refurbished Memorial Hall, Barry, South Glamorgan. With ample parking this is an exciting venue with licenced bar and catering.

The exhibition opens at 10am for the disabled and 10:30am to the general public. We plan to have a special guest to officially open the exhibition at approx 11:30am.

Further information available from Brian Brown 01222 832253

Reminds me of when Jerry Fallwell debated Carl Sagan on Nightline.
Fallwell was forced to speak in "tongues" on the issues. Among the
biggest piles of nonsense ever shown on network television.

Actually "pills" started in the 'hood where everyone KNOWS what pills are & do. When dem illegal bad 11 meter CB linears came on the scene, the "bros" opened up dem bad boy boxes & guess what they did see? PILLS. So now dem linikers are rated on how many PILLS dey have; da mo pills, da mo highs! (High watts, that is)! SAY NO to DRUGS & the CIA proffiting from them!!!
Dave!!!!!!!!!!!!!!!

How do you know? Did he email you from sagan@hellnet.com?

You are entitled to your beliefs but so is everyone else. I have
multiple standing invitations to attend places where I can get
beaten over the head with a Bible any time I feel the need. I
don't.

Newsgroup: rec.radio.cb
Date: 2000-03-26 00:00:00 UTC
From: Zipper <zip406@peoplepc.com>
Message-ID: <38dec853@flexnet239.uunt.net>
Source record: 28898

Go with a Zip-A-Volt. Single,double or triple regulators in one case.
double and triples are controlled with one pot. All induvidual regulators
are fused for maxmum durability and safety. all power transistor are
properly heat sinked.
singles $75.00 US
Doubles $150.00 US
Triples-$250.00 US
All regulators deliver up to 14 amps continous field current.
Email for more info Zip406@peoplepc.com

Here's a question for you, Lawrence. Did God know beforehand that the
35,000,000 were going to be killed? If so, what could any puny human
have done to stop it? If God is omniscient, he already knew it would
be 35,000,000 even before he created the world and changing that number
would have made God wrong.

Concerning For Sale, Auction or Trade posts
to Usenet newsgroups which allow sale posts:

Conventions have evolved to help users separate
and/or filter Trades, Auction sales and Direct sales.

Sale posts that involve auctions should be titled "FA:,"
i.e. "FA: Five 6L6G Tubes."

Direct sales should be titled "FS:,"
i.e. "FS: Heathkit Preamp."

Posts offering items for trade should be titled "FT:,"
i.e. "FT: Zenith for Philco."

(note: Posts concerning an item wanted are usually titled "WTD:")

Thanks very much for your help and
your kind courtesy to the other users.

Hi W6 !,

Just finished working on the clothes washing machine. You know, when you
own a house, there is _always_ something breaking !!! It's the hobby that
keeps on giving (I mean _taking_).

Now what is this. Did God know beforehand.....

Ehm. I don't think so. It all has something to do with the concept of Free
Will. We can choose to thumb our nose at our Creator, or go along with the
program. Ask anybody, from any part of the world, and I think you'll get
pretty much the same answer.

Mike,
Fairly simple. The preamp is an amplifier for the
recieved signal (unfortunately, it also amplifies noise).
The switch for 'am/fm', or ssb, changes how the 'finals'
in the amplifier are 'driven'. If your using am or fm,
put the switch in that position. If your using ssb mode,
put the switch in the 'ssb' position. Do not operate
am/fm in the ssb position though, it can 'hurt' the
amplifier.
The 'hi, med, low' switch(s) sound like you have a
choice of three power output levels...hi..med..low.
See... fairly simple (if you've ever had an amplifier
before, not so simple if you haven't).

Got a newer vehicle and not really any decent place to mount my newer Maxon (2 months old.. rarely used). Besides, i now drive 3 different vehicles, so im going to a good Hand-held unit and different antenna. I paid $40 for the CB and $20 for the Antenna. Will sell both for $40 plus shipping. The antenna is a Cobra. 17ft cord. CB is compact.

Located north of Seattle. (Bellingham, WA)

Other reasonable offers considered. Will trade for GOOD Quality handheld and magnetic antenna, or trade just CB's?

During the late 60's and into the 70's 19 was the hangout for the CBROA
skip
shooters association. CBROA was headed by Hank Penny the guitar plucker.
They broke every rule in the book and then some. They were militant and
even threatened the FCC one fine day and the State Patrol had to get
involved.
CB radio today is quiet compared to those days.
Yes, the Tacoma area especially is an irritation to anyone who wants to
use the
radio for work instead of a toy.

the last thing we need in this country are more people,period, granted in
this day and age there is no good excuse for unwanted pregnacy, but, less
people , less welfare,etc, while I'm on the soapbox, its about time to close
our borders to immigrants too!!!!!,later, and I really wish you'd quit
posting in rec.cb,oh you know what I mean, not quit posting but cut it from
your consolodated postings , I myself am a hell of a lot more concerned
about gun rights,and voting the present administation out of office than
worrying a whole bunch if somebody does the hard working taxpayers a favor
by having an abortion,

>base/mobile/handheld communications.

Yes, but please note the following:

(1) GMRS can communicate on FRS Channels 1 to 7, provided the GMRS radio has these frequencies programmed in. Older units may not. Uniden, for instance, had only a couple of FRS channels available. Some GMRS radios, like the Cherokee, Kenwood, and Motorola, automatically adjust the modulation and channel spacing for FRS (which differs from the mainline GMRS frequencies).

(2) GMRS can double the usable communications distance when used with a FRS. (Don't get real excited. That means instead of .75 miles, you will get 1.5). However, it is not the extra power of the GMRS that makes this possible. Power is a one-way ticket. The key to the deal is that GMRS has provisions for external antennas. That's what it takes to realize any advantage from spending nearly $200 to talk with radios that cost $40.

(3) But it's still a good plan. Remember, let the kids use the cheap radios. YOU keep the GMRS.

For more on this topic, see FRS/GMRS BASE in alt.radio.family.

Message-ID: <2HBD4.2833$6S6.692762@tw11.nn.bcandid.com>
Source record: 28926

hey, i have a mirage 88 that i got off of another driver and i bought a swr/output meter and was wondering if this thing is accurate. it shows deadkey 20watts with a swing of about 80+watts on the low side. then the high side is 50wats with a swing of 150+.
is this right or is the meter not accurate???
this thing talks great sounds great and all in all very pleasing radio. but i would like to know how much its putting out.
thanks

I can't think of any reason to assign omniscience to the Creator. I am in AWE of The Creation, so whatever is _behind_ this Creation, whatever it might be < I am working with the model of cause and effect here > I am therefore in AWE of The Creator for making this reality *possible.* Whatever mechanisms are at work here, according to my definition of Creaton, are a subset of the Laws that Rule the Unvierse. Many of which we do not understand at _all_.

Now if we throw a bag of marbles into a room full of cats, does _any_ Entity know how and when they are going to rearrange them? Within say the next 24 hours? I don't think so. And thus I believe that the universe has an amount of uncertainty built into it. YES it is true that if we understand _some_ laws of physics, we can predict the outcome of some events. In that respect, we ourselves can forsee part of the future.

But behavior is not as predictable as billiard balls on a pool table. For example: Would The Creator be able to *know* all the next series of 1 billion numbers to come out of true random-number generator?

I don't think so. Not if the algorithm was one that produced _true_ random numbers (many are _not_).

And so I think it is with human nature. Perhaps the DESIGN has been foretold, that is the framework of our abilities, but the details reveal themselves through chance and serendipity, amongst other methods. This is what I think. And believe.

The idea that God knows what fish are going to make it to their spawning grounds each year is ludicrous to me. I can _believe_ that it is ordained through Natural Selection < a subset of the Laws that Rule the Unvierse >, that some of them will make it, but to be able to know which ones, how and when.....well, I can't go along with that. There is simply no evidence to support that theory that mankind is presently aware of.

Sorry Whisky Tango,

This is an old habit of mine; trimming posts to keep bandwidth down and intelligibility up. Some of the posts I see here have 20 *froms* at the top, and a bunch of unintelligible junk in the middle from 14 posts ago, and so forth.

In the interest of brevity and comprehension, I have the habit < for better or worse > of only posting parts of the previous message; assuming that if anybody wants the entire message to refer to, it is further up the thread.

Not completely true. Have you flown over the coterminous USA recently?
There is much land available for settlement away from the urban areas.
Furthermore,what makes you believe that some of these 35,000,000 will not go
on to become great scientist, men/women of letters, and so forth? We are
throwing away our FUTURE when we kill off these helpless beings.

and yes
> sir ,I do think you folks are , well wouldn't be as rude to call you

This is what we said during World War II. Let's just mind our business.
It's not _our_ problem. Maybe if we ignore it it will go away. It didn't
go away.

personally I think for years, with the forms of birth
> control that are available,the fears of aids or some other creepy

Well, just because the parents of these unborn humans may be irresponsible
does not allow one to conclude that their progeny will turn out to be the
same.

What I do think, is that society has become so materialistic, so devoid of
humanism and regard for life, that all society is interested in is the
hedonisitic pleasures of the moment. Nothing more. Nothing less. My
feeling is that this is a recipe for self-extinction.

Scott,
Thats possible, but there is a difference in transistor
biasing because of the differences in 'duty-cycle' between
am/fm and ssb. Since ssb is a "100%" duty cycle mode, the
transistors can be 'pushed' a bit harder than for a "50%"
duty cycle mode such as am/fm. Usually, if you run an amp
in the ssb position while using am, more than likely your
going to be replacing finals on a frequent basis. You can't
'push' a transistor like you can a tube.

True, Eagle. But this disclaimer:

GMRS repeaters often require payment of a monthly fee for the service.

Of course, one can still use GMRS on simplex and, as noted earlier, it will interface with FRS on 7 simplex-only channels.

We've just had a couple of more incidents here in Arkansas where it looks like the defendants are going to be tried for double murders because the defendants killed pregnant women. In Arkansas, one can be tried for murder for the killing of an unborn baby -- except if it was during a legal abortion.

Many pro-life people couldn't care less about the morality of those who seek abortion, and our motives stem from other concerns such as the agonizing death of unborn babies which we consider to be human beings, and our perception of society's growing lack of respect for life. You unfairly generalize if you try to include _all_ pro-lifers within your claim about "imposing _their_ morality on someone else"; I can't deny that there are many who do fit that description, and they are usually the same folks who condemn others for drinking alcohol, or for gambling, etc.

I was not aware that castration is a form of birth control available here in the U.S. Can you name one licensed doctor who will perform that procedure for the sole purpose of birth control? Or do you mean "vasectomy"?

A lot of people don't remember that until I believe the late 60's,
CB had channel restrictions.

Family use was allowed on selected channels from mobile to home,
where a 'family member' could use the radio. Then there were
others that were restricted as to mobile to mobile business use
and so on.

I've never heard of this being enforced, and believe it 'went away'
sometime around 1966.

In fact, the only time I can recall seeing it was with the documentation
that came with a Lafayette CB set a neighbor bought about 1965.
This thing was a base, and you 'upgraded' by buying crystals for
the matrix. It also has a 100mw switch.

Ah, if that were only true. Polls in the 70's showed a majority in favor of legalizing pot, but it remained illegal. Polls have shown a majority in favor of legalized prostitution, but it remains illegal. The vast majority exceed legal speed limits and a DOT study proved then ineffective, yet they remain with us. Moreover, legislators fight referendums tooth and nail - the majority in California legalized the medical use of marajuana and the government is still trying to get around them.

Unfortunately, folks like you and I have to work and thus have little or no time to lobby our legislators whilst those who only work Wednesday evenings and Sundays have plenty of time.

Lots of dead brain cells since those days, lol, lets see, channels
7,11,12,13,14,and 23 were ones you could talk to other stations, if I
remember correct,long time ago guy's and the 70's were really hard on me .

Hi...I'm posting from rec.antiques.radio+phono...we prefer not to have
auction posts, figuring that Ebay is perfectly capable of handling it's
own advertising, and has this really nice search engine built into it.

We're currently having a minor war with a couple of people who seem to
insist that its their constitutional right to post their auctions in
the face of 90% of the people in the group asking them not to.

In article <38DED906.BA175332@ix.netcom.com>,
David Stinson <arc5@ix.netcom.com> wrote:

: > not have the training or the discipline needed to take on
: > a major military. Your only saving grace is that most of
: > us in the military and in law enforcement share many of
: > the same beliefs you do.
:
: Am I to take that as a THREAT you snivvling motherfucker?
: to quote YOU:

NO

: >Your only saving grace is that most of
: > us in the military and in law enforcement share many of
: > the same beliefs you do.
:
: What would you do to me if you _didn't_ share many of the same beliefs
that
: I do? Smash through my door in the middle of the night and kill me and my
: whole family? Then burn the house to the ground to cover *evidence*?
Then
: bulldoze the whole thing away do immunize yourself against criminal
: culpability?

You do not get it, do you? We share your beliefs, we are
no threat.

: I think you need to be in the Brig, where you can be watched 24 hours a
day.
:
: I would wager everything I own, INCLUDING my Life, that you and your Ilk
: would suffer enough heavy casualties as to be at the MERCY of the civilian
: population were you to get any *ideas.*

I am heading off to Ft Polk this summer. It is exactly this
type of conflict that we will be war gaming. That is because
everywhere in the world we are fighting militia style movements.
There are no big armies, just little guys.

Initially we take big casualities. Then we get smart. Most of the
fighting is much like Vietnam or Afganistan. Traditional warfare
does not work.

: There are between 235,000,000 and 250,000,000 of us who are _more_ than
: capable of adding to your body weight by putting Hot Lead into it at close
: quarters.

Over half are sheeple.

: I wouldn't want to be in your skin were Civil War to ever breakout in this
: Country. Too many bullets coming from every direction.

Neither would I. But there are many who would love to see
us self destruct. Once a civil war started, there are those
who step in from outside to make sure that we would not be
a constitutional government. More likely we would divide into
several countries who would be fighting with each other for
centuries afterwards. There are those who do not like us being
the strongest country out there.

: The biggest exception is that
: > we are not as paranoid as we deal with government daily
: > and understand how ineffective it can be.
:
: How ineffective you are. Yes, tell us more about that. Didn't kill you
: *quota* of innocent civilians yet this month?

And you are full of fear. As Paul said, "We are not given
the spirit of fear but of power, love and a sound mind." If
you are paranoid, it did not come from God. It shows a lack
of trust in God.

: > : > Am I a cop? No I am not. I happen to be in the Army.
: > :
: > : Big fucking deal. All that means is that I PAY YOUR SALARY. I am
your
: > : *boss.* You work for _me_; not the other way around.
: >
: > No, you pay taxes. The politicians are our bosses. And they
: > pay our salaries out of your tax dollars. And they have the power
: > to force you to pay.
:
: Let's see. Government _steals_ my money, gives it to our corrupt leaders,
: who in turn give you a *cut* of the proceeds. Sounds like something out
of
: The Godfather, if you ask me.
:

You got it. But then only 24% of the adults voted last
time. Sounds like if you do not vote, you get cut out.

: > Nor do we protect you. Our oath, both for the military and law
: > enforcement, is to protect the constitution (the system). People

: > (civilians) are expendable. It is your responsibility to protect
: > yourself. The USSC has so stated.
:
: Which side of the wall you choose to fire from is your own business. I
: consider any incoming, from _any_ source, Enemy Fire, which is to be
: terminated with extreem prejudice.
:

When the Marines secure a building, there is nothing
left. Seems like you have the same mindset.

: > : > I have
: > : > dedicated my life defending this country from "All enemies, both
: > : > foreign and domestic." If you are preaching the violent
: > : > destruction of the country, guess which one you are?
:
: Ahhh, let me think. The Domestic Enemy? Than why don't you either do
: something about it or shut the fuck up. You know where I am. Come and
get
: me.
:

Do not have to. The way you are mouthing off,
you are going to do something stupid one of these
days anyway. Too much fear and too much pride.
Bad combination.

: > : Put your money where your mouth is, or shut up.
: >
: >
: > And you are acting like the left-wing extremists. Don't
: > step over the line and become an enemy of the people.
: >
:
: I am only an enemy of Jack-booted thugs such as yourself. Throw away that
: Einsatzgruppen Uniform and maybe we can be friends.

I serve my country and my God. As have all my family.
You have nothing to fear from those of us who support
the constitution. Do not let the Left brainwash you into
being so paranoid.

: > : > I hope you end up in jail and pinned to the wall by your
: > : > roommate Bubba.
: > :
: > : I don't give a good goddamn what you want, or what you think, anymore
: than I care about which of your roomates ass you had your dick in last
night.
: >
: > I think he was referring to your potential roomates.
:
: They can't be any more homo than yours are.

Very much more. The prisons are full of those
who screw each other. The military still has been
free of much of that influence. And the military is
heavily skewed to the right. Very religious as well.
(The Navy might be an exception.)

: > : > The justice system we have works very well, and

GUILTY
: > : after going to their graves. Works *real well.* Just ask OJ. He'll
: tell you.
: >
: > That is because those of you in Illinois have allowed the
: > corruption up in Chicago to fester. A corrupt liberal mayor,
: > who has forbidden the owning of guns who then has a
: > police force that murders unarmed blacks.
: >
: > It is within your own hands to clean up that mess.
: > The rest of us have a fairer justice system in our
: > states.
:
: Within my hands to clean up the mess? Within my hands? Are you referring
: to this Glock I am holding on to or the ballot box?

The ballot box is more effective. There is power
in groups. Too many of us on the right just want
to live in our own little world, not dealing with others.
We can not continue to do that and still survive. It
takes unity, family structure (to include grandparents,
aunts and uncles - real family) and community. There
are many out there in Illinois who agree with you.
Work together.

: > At least our judges are not being sent to jail.
: >
: > : Why
: > : > don't you try it instead of talking about killing innocent
: > : > people.
: > :
: > : BECAUSE Supreme Asshole, those *innocent people* don't have a VOICE !
: > What they do have is a Silent Screem, that can only be visualized on an
: > : ultrasound monitor.
: >
: > You are sounding like a left-wing extremist of the '60s.
: >
:
: No, I'm a left wing extremist of the Millenium.

Little difference. Except that you are now in your
50s.

: > : If oyu are unsuccessful in changing a lwa, it is because
: > : > the MAJORITY of people don't agree with your OPINION, and
: > : > therefore, it shouldn't be forced on them.
: > :
: > : The innocents depend upon those of us who can be characterized as
HUMAN
: to speak for them. They have no voice of their own. If they _did_, I'm
: sure the first words out of their mouths would be:
: > : PLEASE DON'T KILL ME !
: >
: > So? How many people have you invited to
: > church? Convert people, don't go to war
: > with them.
:
: I think the FIRST guy I'm going to invite to Church for Moral Inspiration
: and Guidance is your fearless leader, William Jefferson Klinton. The Pig
: you have sworn allegiance to. The Pig you bow down to. The Pig you
salute.
: The Pig that is your immoral inspiration.

I swore an oath to the constitution, not a leader. We will
survive Clinton. It looks like GWB will have a good chance
to win.

The real question is whether people like you will turn to
God instead of being so full of fear.

yes I was thinking of buying one but I still dont understand how they work. I was told they combine two 12V batteries when you key, but when you release it charges at 12V. I was told that they are also variable voltage, I just dont see how a fixed voltage from batteries can be varied from 13 -21V @ that many amps. I guess I am still a skeptic, I will have to see for myself.

: That "small minority" does NOT have any God given right to put it's will
on
: the majority. It is happening here. A small bunch of 300 "thugs" really
: controls the US & world. Maybe less than that. The Bible says "The Rich
: rule over the Poor."
: Dave!!!!

Only because folks like you are divided, often do
not vote nor are active in your local community.

Therefore you give "opportunity" for a handful
people to run things.

The average christian is more at fault for what is
happening in America than anyone else. They
have the ability to change things. But they are
either too comfortable or too lazy to do anything.
And too many do not really believe in the power
of God.

: You need to get some help for the severe emotional disturbance
: you have. Your violent nature can only serve your own
: destruction.
:
: Am I a cop? No I am not. I happen to be in the Army. I have
: dedicated my life defending this country from "All enemies, both
: foreign and domestic." If you are preaching the violent
: destruction of the country, guess which one you are?
:
: I hope you end up in jail and pinned to the wall by your
: roommate Bubba. The justice system we have works very well, and
: it has systems in place to change laws you don't agree with. Why
: don't you try it instead of talking about killing innocent
: people. If oyu are unsuccessful in changing a lwa, it is because
: the MAJORITY of people don't agree with your OPINION, and
: therefore, it shouldn't be forced on them. If you want to live
: in a place where the will of a small number of people can be
: forced on the entire population, then you shouldn't live in this
: country. A place like China, or Russia shares your views that the
: will of a small minority has the God given right to enforce
: there will on the rest of the country.

> auction posts,....
USENET news group charters that allow sales, allow auction sales.
They make no distinction.
The definition of "hawking" is irrelevant, since all sales notices
fall under that definition. Complaining about it is pointless.
You might as well curse a rain storm for raining.
FA is here to stay.

> We're currently having a minor war with a couple of people who seem to
> insist that its their constitutional right to post their auctions in
> the face of 90% of the people in the group asking them not to.

I have followed this "war" on r.a.r+p. As it was on the ham groups,
the actual complaining is being done by a very small but vocal minority.
As on the ham groups, the majority know that this is a simple matter
of setting filters. That is why the "FA, FS" convention came about-
it fixed to problem for all reasonable people.

It is selfish and inconsiderate to demand that the majority,
which appreciates FA notices, be denied them to satisfy
a few complainers- whose motives are considered suspect,
at least in the ham groups. Such complainers on the ham groups
are now quickly reminded to use their filters and not start
another big, pointless fight which can only be destructive.
Newbies are politely asked to use the "FA,FS" convention.

I continue to be astonished that grown men who have attended
auctions all their adult lives continue to create hate and discontent
over an auction. Auctions are here. They will stay here.
Please set your filters and live in peace.

Kind Regards,
Dave Stinson

I have long been intrigued by the so called "export" rigs. The President's, SuperStar's, Galaxy's, etc. Does anyone know where these rigs actually come from? The likeness of the SuperStar 360 and 3900 to the Cobra 148 seems to indicate that Cobra made the rig, and everyone know's who President is. But were these actually made by those companies or did someone "steal" the name or likeness of those rigs? How do companies like Copper (aka H&Y) or CCD (Cash and Carry) obtain these rigs?

6401. FA: Brand New Astatic Golden Eagle microphone

I found this on eBay. There are several pictures of this brand new never-been-used beauty. So far no bids. Opening price set at $225. I already have a Silver Eagle ,10-DA and Diamond Eagle D-104. Someone is sure to snap this one up. The photos are really gorgeous. Check it out. It is not my item and the seller does not know I have posted this. It is just a FYI post. I have nothing to sell myself.

You lie. I have never said that women, ALONE, are irresponsible.
Surely you can make your point in some manner than a bald face
lie.

I challenge you to prove where I ever made that statement.
Otherwise, go have fun sticking your keyboard up your ass.

Strider

Nor do I, but I will say this: Just before that "hawk" passage,
practically in the same breath, it says that sales are permitted.
The two statements are mutually exclusive and therefore meaningless-
you can't have it both ways. In any event, the FA posts will
continue. It's better to follow the agreed-upon convention
of using "FA / FS" so everyone can live in peace.

Kind Regards,
Dave S.

(Why do people who claim to be offended by FA posts
continue to click on and read them? They don't read
every single word in a newspaper, and they don't
complain about that. It just don't make sense
and fighting over it is even sillier...)

Flame proof suit on

I posted a while back about the condition of that freq. Since then it has been turned into the worst pile of crap I have ever seen. I see 27.555 as a sort of international conference. Each of us that use that freqency are dipomats for our country. How would you view the US if you were a foreign citizen listening to the way these people act? The idiot I hear on there most splatters about 8 channels each way. He's constantly antagonizing people telling them to turn him into the FCC, cut his coax, tear down his antenna, everything. Alot of people I have QSL'd with all complain about Big Time Operator Bob. A gentleman in Wales told me that Operator Bob ruins 10 channels around the one he is on. I realise that being in those freqs is wrong, and you should just put up with the crap on there, but come on people. I don't want to be seen as one of those asshole americans that act like idiots and ruin the fun for the rest of the hobbyists.

brass,
I don't know about the cost. Think about it by the time you buy a
amp,voltage regulators, batterys then buy a motor maul you have spent
enough money to buy a AC box that would whip the hell this set up. I
have never seen one but there would need to be a lot of stuff inside
that Motor maul for that price.
Bean

For some reason, people can't quite get it thru their heads that it is an International call frequency. They choose to carry-on QSO's there. The proticol is to place your call, and then QSY to a different frequency. That way, someone else can place their call too! Must be A.M.'ers TRYING to be sideband operators.

you are wrong sir it is only a few that make your charge on the antique newsgroup.you will have even less company
here.if you spent more time reading instead of complaining about a few sale posts you might learn something about
radio.your complaining burns up way more bandwidth than the few ads do.
go find somplace else to cry

>> biggest piles of nonsense ever shown on network television.
>
>I missed seeing it; which one was spouting the nonsense? ;-)
>
>Bill Velek

1==> Gee, I dunno Bill, depends on whether you prefer extremely
conservative Protestants such as Fallwell or atheistic apostate Jews
such as Carl Sagan, doesn't it?

2==> Maybe we could put an atheist such as Sagan at the extreme left
and a conservative such as Falwell at the extreme right. If consider
this scale of belief in God as

0 [Sagan] ----------------------------------10 [Falwell]

Just where do you want to put the RCC and your own beliefs? Please
assign numerical rating between 1 and 10 for your own beliefs and what
you think the beliefs of the RCC are.

3==> Please repeat the same exercise with belief in the Bible, please.
RCC belief [in your opinion] and your personal belief.

4==> Know that you like to try to "live in the middle" but just for
the convenience of those of us who actually believe in the Bible, how
do you want us to evaluate you?

Perhaps the materialistic scientists would like a statement from you
as well.

5==> Haven't seen many members of the "fence sitters union" posting on
the >misc.survivalism< group, but there might be some.

Hey, come on,middle ground, all out, roll up, support Velek who seems to want to occupy the "middle ground" between belief/disbelief in the Bible, for a start.

6==> A few weeks ago either Walter or I mentioned the "Church of Laodicea" as mentioned in Revelation 3:14 and following verses.

Did you bother to look it up? [Just curious... You did say in an earlier post that you hadn't read all of the Bible, didn't you?

7==> Incidentally, have you been following the news on the "Ugandan cult" situation? Now seems to be more of a case of murder than suicide.

Wasn't it you who once made some remark about the dangers of Protestants following the guidance of the Holy Spirit without the guidance from the RCC?

8==> Would you now like to comment on the religious affiliations of the leaders of this particular cult?

...Yes, I realise that perhaps you are perhaps too petulant to read my posts, but perhaps someone else will comment on them, or otherwise bring them to your attention.

9==> Uh, didn't I read something recently from you in which you said something about crosspostings from JBTs? ....If so, can you explain why you have crossposted to the following newsgroups with this post?

****
rec.radio.amateur.policy,misc.survivalism,rec.radio.amateur.misc,rec.radio.cb
****

[I will do the same crosspost, for this one post, just to establish my point. I apologize to the members of those other groups. I'm posting from /misc.survivalism/.]

Who knows? Suggest you ask Velek. He seems to be almost as careless
with postings as with facts.

He doesn't claim to be God himself, but does claim allegiance to a
religion which seems to claim that it represents Jesus and/or God.

Whatever you do, please don't confuse them with Protestant Christians,
eh?

kiss. keep it simple stupid ,,, you guys are going to great lengths to
show how smart? you are ..... if all the power gos out the antenna then
the swr is considered 1to1. anyway the topic was what is swr. two
componentsdetermine the swr ,reactance& resistance.if the antenna isthe
right length (reatance)& the input is 50 ohms the swr is 1 to 1. try
using a noise brigde to get the idea.

I'm sorry, but your opinion is demonstrably incorrect.
All of the groups in this thread allow sales within their charters,
save r.r.a.p, to which it was posted because the
"FA FS" conventions are a matter of voluntary policy
on the ham groups, and are designed to keep the peace between
reasonable people. Unfortuantely, some people continue
to be unreasonable, causing fights by demanding
they be in charge.

> > 'push' a transistor like you can a tube.
> > 'Doc
> >

I think there is some confusion here. First off, if the amp is not for AM/SSB, it may not be biased to operate in a linear mode. A lot of amps for FM service are biased class C which means the transistor is off for part of the time. This is ok since the filtering on the output is easy to clean up, and the amp can actually be made cheaper. Or have more power for the same price. Same thing, right?

IF the amp is biased so the transistor stays on, then it will operate in a 'linear' mode. This is needed to SSB clean. Once that's distorted,
you just can't 'filter it back'.

So, if the amp HAS the AM/SSB switch, it more than likely doesn't change the amp in any way at all, but instead keeps the relay from 'dropping out' on 'valleys' in the SSB signal. In the AM (or /FM) position the relay would drop back very fast on carrier drop to quickly be in receive mode. In SSB, you need to wait just a bit...

If the amp has the switch, then it's capable of SSB (ie linear) mode. If it doesn't have the switch, then it MAY or MAY NOT be capable of linear mode.

With a lot of amps it's not that difficult to modify them to be linear.

Mike

Hello! Are there any mods out there for a Midland 77-115? Any idea what kind of transmit power this little rig has? Also, I live near 2 big cities with many major highways nearby so there is a lot of 'noise' on the popular channels and I'd like to know if there is a specific mobile antenna design that would work well to help me filter out much of the noise and help the stonger signals come in clearer.

Thanks!

I have an inexpensive set hof cb hand helt 5 watt transmitters. They seem to work only at close range, then the signal becomes extremely weak. Maby 100-300 yards is the maximum disgtance. I also tried with a mag mount on a car and still not much range.

What kind of range can you expect with a cb 5 watt hand held?

What king of range with a good base usnit and antenna?

Thanks,
Jack

"> Does anyone know where these
>rigs actually come from? The likeness of the SuperStar 360 and 3900 to the
>Cobra 148 seems to indicate that Cobra made the rig, and everyone know's...."
COBRA Does not have a factory & has never really "made" anything".
Over the years Uniden, Maxon Ranger & others have all built Cobra's radios....
The Original President & Superstar series of "export" radios were built
overseas by Uniden. Thaey have since been "cloned" by other makers, most
notably Ranger, who currently makes about all the radios that are labled
"Galaxy, Connex, Mirage , General Lee ect.." Uniden (overseas, not Uniden USA
division) still makes the President Jackson (not SS JA) , President Grant,
George, JFK & other export type radios too. Ranger seems to be the biggest
player, & almost all of the export rigs are close "copies" of original
Presiden Grant & other Uniden Export designs. There is also a couple of
Chinease & Phillipenne/ Korean companies that make the "Northstar" (copies of
the copies!) , Emperor ect.. & many of the newer "LCD" export radios like the
Magnum 257/HTX-10, Sidewinder & others..... Most are locked down into 10M
amateur channels only to "legally" get them into the country, & require a "mod"
to unblock all the CB & expoert bands. Recently, however, the FCC has been
cracking down on some 10M rigs that in their words are "blatantly & primarily
designed for bootleg CB operation".......Hope that answered a little of your
question!!!!

It's not an oversight....It is snooty HAMS doing what they do! Kinda makes me glad I'll miss it by a few weeks on moving back to Jersey.....3 weeks and counting!
They just want to yap with their "know it all" ham buddies on 2 meter WT's rather than have someone set up there with 11 meter although they may even understand that CB'rs are going to go there with plenty of cash to spend on their overpriced crap. How many used 75 dollar D-104's will be displayed this time around? You might want to save your time and money and go to Yonkers!

for real, is it really 14 carrat gold plating? like i said, i have one,
and they are very nice, but for me a night eagle is much better unless
you are in to collecting then so be it , but function beats out form
anyday, at least for me , in this area and for function and overall
appearance , my vote goes for the d 104 nighteagle , beauty , function
and price, and one can be had for about $75.00 or less, new in the box,
so that is my roger,......cd is out.....

Transformers, capacitors, regulators . . .

Can you run 4 pills on One Regular Deep Cycle Battery?

With a factory altenator and a factory battery up front?

Now with two batteries per 8 pills the same requirement?

Now Voltage is variable (dont need an external voltage regulator)
2x12's make 24

Key underload and set the hold voltage via the remote

They do work . . .

and better than caps

LESS DAMN WEIGHT, COST, SAFETY SAFETY SAFETY

If you run SKY class . . .
stick with your 1800+ lbs of batteries (ACID)
Buy your 1,000 dollar smooth spinning rack
Now fit your 8 Eight Large Case's on the above rack
intall your 400 amp rectifiers
Install your Fan Sets on the radiator
Cut the hole for the manditory air induction system
Buy your Gas
and get to the line

It's all in what you want

Prices?

notice the suggested cost

16 volts during the week
20 volts on saturday
23.7 volts on your lips

Jack,
The range with a 'handheld' is going to depend more
on the antenna and surroundings, than on power. The
range your getting is really about the 'practical'
range you can count on, ->depending<- on surroundings.
Bet you were 'in town'. Using your handheld on your
'base' antenna would give you the same results as using
your 'base' radio. If your the one down the block
with the handheld, you've still got the same problem,
no antenna elevation and surroundings galore.

Source record: 29085

Dieter,
Hello! I can't help with the 'mods', but might be
able to make a suggestion about the noise. There are
no 'magic' antennas, I don't think that's the area to
use to solve the noise problem. You might consider a
DSP filter. It should handle most of the heterodynes
and 'car' noises. DSP filters aren't 'magic' either,
but they do reduce the 'junk' without too much loss
in signal intelligence. (Can you use that word to
describe radio 'talk'?)

GTE,
Try Walt Williams (W5YUO). He makes power supplies
in almost any size/way you want, and is MUCH cheaper
than any of the commercial brands. Also has a warrenty
that is better than ->any<- you will find offered by
any manufaturer.

Source record: 29089

Good Day!
I run several hand helds. They are used primarily when hiking, fishing, camping, etc. Most of the units have a transmit power switch that lets you switch from 1 to 4 watts. Out in the country in normal conditions I find we can expect about 1 mile of reliable communication range, more if the country side is open or if transmitting over water.
Distance in the city is a different thing. Don't try to use it in your vehicle unless you have hooked up an external antennae of some sort. In the city I have found that reliable communications range drops anywhere from 1/4 to 1/2 mile.
The limitation you are getting is primarily because of the antennae on the unit. If you are using a telescopic antennae you will get more distance than the standard 9" rubber duckie. Cherokee makes an extended rubber duckie whip for handhelds (model SA4) that is 28" and does improve performance but they are getting hard to find for some reason.

Yup..real 14K gold plating. Since those mic's are about 25 yrs old now it's tuff to find one that does not have some of the plating worn off. I looked at one at the CB shop in town for only $100 but it had lots of wear and some of the plating was worn off. I would like to bid on the Golden Eagle on eBay but really I don't need another D104. I was just on the phone with Astatic ordering some parts to repair a Silver Eagle and told the lady about the Golden Eagle for $225. She said some she knows of have gone as high as $1500! Damn I can get a real nice amateur transceiver for that price. See you later CD

I have attached a JPG file showing how I'm going
to quickly disconnect the power to and from my
RCI 2970 HP.

The car and truck both have the pos 10ga wire going
directly to the battery and the neg 10ga wire going to
a motor bolt for ground.

The end connector in each of the vehicles is the female
version of what you see in the JPG file.

Both neg and pos legs have inline 15amp fuses.

Is this quick disconnect method going to cause any
problems ?

Email address is bogus due to spammers.

You are going to have to put the jpg on a web page because
binary files are filtered out by most news servers in
non-binary groups. Including mine.

Not if you read the charter by the moderator/person-in-charge at the host system of the hierarchy..... Only "rec.radio.swap" is for the exchange of equipment. (Such is attached after the quoted message I reply to.)

Just because "for sale" messages occur on those groups doesn't make it proper.

On Tue, 28 Mar 2000, David Stinson wrote:

[Header abbreviated]
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: List of the rec.radio newsgroups
Summary: This article provides a list of the rec.radio newsgroups; it is posted alternately with the longer "Guide to the Rec.radio NGs"
Posting-Frequency: Posted on the 1st of each month

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)

rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

This boy just takes his girlfriend back to her home after being out together, and when they reach the front door he leans with one hand on the wall and says to her, "Sweetie, why don't you give me a blow job?"

"What? You're crazy???!!!"

"Don't worry, it will be quick, no problem."

"No!! Someone may see; a relative, a neighbor..."

"At this time of the night no one will show up.."

"I've already said NO, and NO!"

"Honey, it's just a small blowie... I know you like it, too.."

"NO!!! I've said NO!!!"

"My love.. don't be like that.."

At this moment the younger sister shows up at the door in nightgown with hair totally in disorder, rubbing her eyes. She says, "Dad says either you have to blow him, I have to blow him, or he will come down and give the guy a blow job himself, but for crying out laud, to tell your boyfriend to take his hand off the intercom!"

The motor maul will replace alternators by using 2 12 volt batteries. The maul is hooked up to the standard 12 volt charging system and this is what keeps the other 2 batteries charged. When the maul is activated, a relay opens up which disconnects the 12 volt charging system from the maul and batteries. Then the maul has another relay that closes so the other 2 batteries go into series and put out 24 volts. This voltage goes thru a circuit to a variable regulator circuit so the voltage can be set from 14 to 24 volts. The unit has a remote that is connected from the radio to the maul that samples rf to activate the maul. I have an 8 pill maul that I run my boxes on and they work very well. I run these products so that I know whether or not they work.

Question,
no attachments on your query, Question, but if
the connector is rated for more than 15 amps, I don't
see any problem. I DO see a problem with your
grounding method. Run the ground to the NEG terminal
of the battery, not the engine block. Some times it
makes no difference, but some times it does. Why
take chances. Also, you may never see it, but the
additional path to ground going through the engine
block wastes some voltage (negligible if all
connections are good...quite a bit if they aren't).

Your interpretation. Others differ. And it doesn't matter.
The posts will continue regardless of anyone's interpretation.
The only thing that's important
is that we learn to live together without all this fighting.
That's what the "FA / FS" convention is all about.
Personally, I detest and hate blind "make me an offer" posts,
but I don't raise Cain about it- I just pass them by.
When someone puts "FA:" on a post, it's easy as pie to just
not click on it. I don't read the furniture ads in my
local paper, but I don't cuss people about it, either.

Kind Regards,
D.S.

Thanks for the helpful replies, that goes for "hillbillydave" as well. I had heard about Ranger being in on the Galaxy's, but I didn't know they did all of them!

Two quick followups - I had the Sommerkamp labeled 2950, right before the 2950 became hot. Ranger release that one too, or was it a clone? Also, how do the dealers get in on this? Not the smaller shops, but the Copper's and CCD's? Obviously they don't just call RCI and order a dozen cases of DX-88's, or do they?

You don't mention what type of antenna you have, but I'm going to guess it's a 102" whip? If so, how about mounting it at the top of the bed someplace? If I'm wrong and it's only a 3' or 4' you might get away with a mirror mount - no holes needed!

In article <se2jatcdead28@corp.supernews.com>, "mesief" <mesief@nep.net> wrote:

There are a couple of keys in this message that everyone seems to have missed. Since FCC regulations require that CB trancievers have a max RF output of 4 watts, this rig (unless it's an "export" handheld, which I have seen) isn't doing 5 watts of RF, it's doing 5 watts of AUDIO - in other words, it's kind of loud.

Second, is the word "inexpensive". Assuming Jack meant relatively inexpensive when compared to other H/H rigs, chances are good the power is lacking somewhat in this rig. 300 yards sounds about right in the city (in which case Jack would have likely reported performance in "blocks", not yards), or mountains, or for a rig in the 0.5 watt to 1 watt of RF out. Of course, antenna design and a plethora of other things could affect performance, but I'll put my money on low RF power output.

In article <vo4E4.1991$ZE4.37249@ord-read.news.verio.net>, "Jack Coneti" <bcajack@yahoo.com> wrote:

If this is anything like the little 77-114 I had, it's a HOT little radio. No mods for channels, and not a lot of power, but the audio is second to none. Have it opened up and put a D104-M6B or similar on it (you'll need the power mic just to turn it DOWN) and it will scream.

Use a good antenna - Wilson, K40, etc. - and you'll impress your friends!

If you havn't checked out the CB City Website lately, you are in for a treat!

Have been doing some remodeling and touching up things, and things are hoppin' all over.

Have a lot of used radio equipment, Galaxy, Cobra, Connex just to name a few.

There is a ton of information in the for the getting & adding new features all the time.

Come on by and check it out, and you will definately see it is one of the nicest CB websites on the internet.

Leave a message when you arrive to say hello.

Check out CBCity.com, you will be glad you did.

WAIT A MINUTE!!!!

You claim that these have the "Optimum length to diameter" ratio, but I coun
t no less than 5 different diameters from the different parts joining togeth
er.

I also HIGHLY doubt your 15Kw rating.

If you would like to prove it, send me one. I will compare it, stuff a 4CX5
000 into it, and report my findings.

If it takes it, does not increase the reflected power when changing power le
vels, and works like you say, I will eat my words.

If it doesn't, then you owe me a new tube....

The 4CX5000 is a thousand dollar tube.

Care to stand behind your product?

Your smoking dope, right?

There are many good radios out there, but few can compare to The President G
eorge.

>>>I have a President James, and while I agree that they are a good radio, t
he George doesn't work ALL that well with a linear, and I have heard better
AM transmit. However, for SSB, it is a damn fine radio.

This gem of a radio boasts many features not found on other, lesser radios s
uch as:

>>>All around, about the same as any Galaxy!

* Internal, user- definable security code. Should someone be foolish enough
to steal the unit, it will be inoperable unless the code is re- entered.

>>>Which can be broken with the hack available on the internet.... Useless
gimmick.

* Sixteen channel memory. Stores your favorite frequency AND mode of operat
ion. Jump to your favorite channel with the push of a button!

>>>Not quite that easy, but functional.

* Three ways to change channels. From the rotary knob, using the push butto
ns on the radio, or from the microphone!

>>>Yes, you can reach down and change the channels with the buttons on the r
adio, or the knob.. Never figured out why President included both.. Maybe
to fill space on an already cluttered faceplate?

>>>And you lose that FANTASTIC functionality when you replace the mic with a
D-104.. The stock mics they supply suck quite a bit of ass.

* Full frequency coverage from 26.105 through 28.805, including all 'A' chan
nels.

>>>My Galaxy does better.

* AM, FM, and SSB modes

>>>Which is standard on nearly any export.

* Full complement of front panel controls including variable RF power and op
en clarifier.

>>>Yes, you too can have the variable carrier, so everytime you go get back
in the car, you have to reset up your entire station, wondering if that stup

id carrier control was moved by junior when he was fidgeting... 'Cause you know the George can deadkey 30 watts, and that would DESTROY almost any amp out their.

* Full internal metering RX/TX, SWR, Modulation

>>>Modulation meters are useless... What other radio doesn't have a RX/TX m eter. SWR meters are useless on a radio.

* Dual- color background lighting for the Liquid crystal Display. No LED's to burn out!

>>>Tell that to all the fine people who purchased Emporers and live up in th e north, that now have totally junk radios because the LCD froze. I like th e LCDs myself, and think that my RCI2900 was about the best, but the damn di splays aren't what they are cracked up to be... Yet another reason the Big Three Jap companies use the displays they do.

* Extremely quiet and sensitive receiver. I've had a LOT of radios through the years, and I have NEVER had a receiver like this one, unless it was an I COM or a YEASU, which can cost thousands of dollars.

>>>Yes, the George has a KILLER rx section... Along with all the other Unid en Exports on the market now under the President name.

* And many, many more features.

By itself, this radio is a force to be reckoned with. But there is more to this offer...

The selling price includes a TX-800 mobile amplifier. These two units were recently serviced and matched to each other (receipt available upon request) .

>>>Who gives a shit? If the tech that did it didn't know what he was doing (and by your comment coming up, I HIGHLY doubt either of you do), then all h e did was turn the coupler and carrier adjust for max wiggle on the meter.

This amplifier will easily produce 1,000 watts DEAD KEY, when used in the 'High" setting.

>>>No it won't. That is out and out bullshit. I know the person who builds the TX series of amplifiers, and they where never designed to go that high, and never did. Hell, I tried to get a thousand watt carrier out of one into a Bird dummy load with two Astron 70A power supplies and a marine battery ba cking them up. Never happen, buddy. You don't have enough drive power out of the single MRF 455 / 2SC2290 (depending on the age of your amp) that they have. Couple that with the Class AB design of the amp (which makes your "Mo dulator" statement coming up look stupid) and you would be bringing in near 2200 watts of DC input.. Divide that amongst 5 transistors and you get near 42 amps into the collector of each 2879.

>>>Right.

Typically, I have not run it that hard.

>>>I would pray not!

Instead, I keep it in the 'low' setting, which provides a 40 watt dead key w
ith a swing of between 300 and 400 watts using a 2.5 watt input.

>>>Mighty non-linear for one of BPs amps. Guess that must be the shitty mod
s to the radio doing that.

On the low side, the amp acts like a modulator.

>>>Not stock, it doesn't. Stock 1 watt in gives about 70 out, 5 watts in gi
ves about 350 watts out. Nice and linear. Just like a Messenger box.... F
rom where the major design of it came from.

This is the preferred mode of operation for this unit, as it puts no unneces
sary strain on either the radio, amp, or your vehicles electrical system.

>>>If you have to worry about your electric system., you have no business ru
nning an amp.

The TX-800 is an amazing amp, not much bigger than a run of the mill 350 or
so.

>>>Read that as it gets HOT quick when running it like it should be able to
run on AM. SSB it works fine with a stock radio driving it, but on AM, they
suck a bit of ass.

But it will outperform amps more than twice it's size. Dual fans keep thing
s cool,

>>>Read that comment as the amp is noisy.

and a front- panel indicator warns should operating temperatures get too hig
h. Of course, this amp has all the usual features, both AM/FM and SSB mode,
as well as a preamp for pulling in the weak signals, but you will never use
it because the receiver on the George is THAT DAMN GOOD!

>>>I will cut off the rest of his spew.

The deal isn't bad, but this asshole belongs selling used cars.

Bo, the trick is that most people can't or don't want to spend the over and above cost on hanging alternators, pulleys, and so on. Knowing what you run and what you have is a major cost. Most folks that want to run some power are not competing in the key down circuit, so this allows them to actually save some money and still achieve what they are trying to do. I think this is where brass was coming from here.

[Via NG and E-Mail:]

Dear Jim (N2TDI):

Please help! Your hamfest was advertised in Internet news groups as a cross posting which included the family radio service forum.

This NG serves American families, most of whom are not amateur radio operators. The equipment used in FRS is 1/2 watt, fixed-antenna walkie-talkie style, and is designed specifically for short-range personal communications. FRS users typically do not engage in hobby style conversations. Most use CTCSS to eliminate traffic from any stations other than their group members.

We have tried communicating with the originator, but the messages bounce. Since your name appears on the referenced web site, we hope you can assist.

Please find the person who is cross-posting from Roseland Radio Club and ask them to stop. Actions like this result in thread after thread of off-topic (and often abusive) messages. One such thread about DXing is into three digits in the message count.

Thanks for your help, and best wishes for a successful hamfest.

6511. FS- Big HV Transformer for big tube amp

Newsgroup: rec.radio.cb
Date: 2000-03-29 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000328213214.11571.00002468@ng-ba1.aol.com>
Source record: 29130

I had a few of these and this is the last one!
FOR SALE- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @ http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference for size in the pic. This transformer is very big and has alot of duty cycle. It was removed from a 5KW HF Jammer used by the military. It has multiple taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred volts to suit your needs. It also has a center tap. -$250- It weighs 175lbs so pick up near Philly is required. I will be at the Trenton/DVRA Hamfest so I can meet someone there with it also.
Thanks for looking,
Jim

6516. Re: SALE, AUCTION and TRADE Posts to USENET Groups.

Newsgroup: rec.radio.cb
Date: 2000-03-29 00:00:00 UTC
From: StarChaser Tyger <starchaser_tyger@my-deja.com>
Message-ID: <8bs0k1nci1@nnrp1.deja.com>
Source record: 29135
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.policy,rec.radio.cb

What it says, in fact, is:

"7. Casual buy, sell, swap, and trade, of old radios and phonos, parts, are within the charter. Please keep in mind that this is a discussion group, with many non-collectors who have one or two items that they enjoy. This is not a place to hawk your wares."

People who contribute to the newsgroup and occasionally have a service or a single radio for sale are appreciated. People who post every bit of crap they've excreted onto Ebay whether it has to do with radios or not, and who contribute in no other way than whining about how they're allowed to post anywhere they want to and you can't stop me, are reviled. I see that a post by 'MIT' follows this one. He is one of the people that r.a.r+p are having the worst problems with, and I suspect it's the same thing he normally posts, something about crybabies.

<This does apply only to rec.antiques.radio+phono, BTW. Your mileage may vary.>

<Missed this first time around.>

Why do people persist in posting FA posts in newsgroups whose charters say they do not belong, where almost all of the regulars have stated over and over in no uncertain terms that they are not wanted?

rejected@hotmail.com wrote:

: Are there any possible modifications to the TRC-236 to increase the 2.5
: watt standard
: output to a more useable 4-5 watts?

It is highly unlikely if you would notice any increase in distance or
perceived signal strength by doubling the output power. You would see
an increase on the s-meter - but for weak signals, it would probably
not be noticeable.

Hello, I modified my Cobra 148GTL with the MB 8719 to receive more frequencies a while back ago. I have mounted 2 SPST switch for a possible of 4 settings covering from 26.815 to 28.045MHz. My problem is that I lost my Channel Mapping for the listings now I do not know what frequencies I'll be transmitting. If anyone have done this modification and have the channel mapping can you please post it here or email it to me. Thanks.

EBay itself asks its auctioneers to be sensitive to newsgroups'
guildlines.

Last year I conducted a straw poll on rec.radio.swap concerning
whether readers liked or dislike auction notices. Of those who
responded, the results were about 50-50. Perhaps someone on
rec.antiques.phono+radio might consider doing the same.

Source record: 29149

I used CB back in 1965 when I was about 15 years old and I'm getting the

itch again. I am not new to the 'net or to the NGs, in fact I've been writing
websites for the last couple of years. But I have a few questions for the more
knowledgeable out there. To wit...

I am planning to mount a Maco V 5/8 wave GP on a 60 foot mast. What would be the the optimum height for the radials?

I am looking at purchasing a Cobra 148 GTL-ST for base station use. I plan
to power it from a 3 amp, regulated power supply. I will be running barefoot
and naked. Will this power supply be sufficient?

Any other advise will be greatly appreciated. Thanx in advance.

fiddler

DukkhaKoti,
Lots of possibilities! Use a short mobile antenna
with a 'counterpoise', stick it out the window, bring
it in when your finished. Make it look like a flag-
pole.
Depending on the construction of the building, and
if you have metal screens on the windows, feed the
screen (using a counterpoise again).
Use a magnet-mount antenna inside the appartment,
(listen for 'cussing neighbors).
Anything can be made to work as an antenna, may not
be easy, but it can be done and probably has been before.
'Doc

Russell,
Sounds like you've got it figured out. Grounding
the radio to the ac-outlet will give you a good
electrical ground, not much of an RF ground. Another
ground rod may/may not cause problems, try it and see.
When running the ground 'wire' to the rod, use LARGE
size wire, do not make it 'odd' mutiples of 9' in
length (like not having a ground at all)! You can
use 'even' multiples and be okay.
'Doc

My Adams has a problem from the day I brought it.

On AM the transmission is fine (4watts) and adjusting the mic gain has the expected results.
However, on SSB (4watts instead of about 12PEP) when I adjust the mic gain it starts a nothing, peeks at about 1 3rd of the way round the dial then rapidly dwindles to nothing at about half way and stays there for the rest of the dial.
I have had the cover off and adjusted, then replaced ct7 (ALC). No change.

I am suspecting the mic gain control itself, but because it works on AM I'm not so sure.

I brought the set second hand and it had a digicscan professionally wired in.

I live out in the sticks and it will be difficult to get a "real" tech to look at it, does anyone have any more ideas on what I can look at?

Cheers and thanx in advance

Actually, Image problems WERE a concern when the "new" channels were proposed. A typical single conversion CB receiver had a local oscillator that was running 455 Khz above the desired channel. In theory then, if you are on channel 1 with such a radio, you would be susceptable to an image at 27.875 (which would have been channel 87 under the 99 channel proposal). A dual conversion receiver would have cured those problems. Nonetheless, it is widely accepted that one of the main reasons that the FCC stopped at 40 channels instead of the original proposal of 99, was due to image problems associated with 455 Khz IF receivers.

Ah yes, the local oscillator leakage problem. Yes, that was a problem. I
can remember back in the 70's how we used to use this information to
find out whether certain locals were on listening, and what channels
they were tuned to, simply by siting near their houses, and listening
for the local oscillator leakage.

> it?,

Well, it's not all that peculiar, if you think about it. If you are trying to run legally, one of the cardinal rules was to identify with your FCC assigned call letters. All it takes for an FCC monitor to "nab" a legal station that slips up is to hear the call letters, and they now know right where to send the pink slip, without leaving their seat.

If you adopt a "freeband" attitude, right from the get go, the FCC field agent now has to go through the trouble to track you down to issue a citation, something they couldn't do without authorization, and a compelling reason. When we ran hard and heavy back in the 70's I NEVER used call letters. It was stupid to be running power, illegal channels and whooping it up with the locals and then turn around and give "the man" your address.

We had a few groups of locals that tried to "clean up their home channel" by refusing to acknowlege anyone that didn't use call letters.

But then they'd go off on a freeband channel later on and play around. Talk about dumb! Like the FCC wouldn't be able to tell, that KXYZ-1234, was the same guy as "Jumpin' Jack", unit 123, calling skip on 27.555.....

The "channel restrictions" were that units that were under different
station licenses could only use channels 10 through 15 and channel 23
for their comm's. Units under the same license could use any channel.
Channel 11 was reserved as a "call channel", and 9 was reserved for
emergencies.

I still have a JC Penney radio that has channels 10 through 15 and 23,
on the selector, colored in green, and channel 9 in red. The rest were
in white.

You twits just don't get it. It is selfish and inconsiderate to demand that you should be able to post FA notices to a DISCUSSION group just because you think in is your "right".

>
> I continue to be astonished that grown men who have attended
> auctions all their adult lives continue to create hate and discontent

Not everyone can set filters and even if they can, why do they have to accomodiate you just because you want to do what ever you wish without any regards to anyone else? Unless there is some attempt to control FA postings you will have every greedy ebayer who wants to auction something posting to the group and soon you will no longer have a discussion goup, just a group full of FA postings.

I have an aluminum bracket that holds the anntena on the outside of the window by closing the window down on the bracket. I use a couple of pieces of wire on the inside as radials. I also have a pair of vice grips with an antenna mount fastened to them that I can clip on balcony railing and the like. Been doing this for about 5 years and have never had a complaint.

I don't mind the FA listings... as long as the FA is put in the header...
I've went to read a couple of listings.. and found out there was a link in the listing to an auction page...!! No mention anywhere in the header that is was an auction...
Like the one where the header metioned what the item was.. and then read it and find out that I have "3 hours left to bid on this excellent piece of merchandise"
(more than likely there because he wanted more for it than was already bid..his reserve had been met already the day before)
So how in world do you filter those out.??
If I want to see what is up for auction... I go to Ebay or other places myself...
What are the rules for posting " x amount of hours left on this auction" ???

I have a HR2510 that is in new condition with the box, manual, and the mike.
There is one down fall there is no power cord. So if anyone is interested in it
$160 is the cost of the radio and shipping.

Yaesu made a scope specifically for that purpose, the YO-101. I picked
one up at a hamfest for somewhere around $100, years ago. Don't know whether
Kenwood made one or not, but I wouldn't be surprised if they did. Unless
you're really determined to home-build, scrounge the local hamfests for one of
these; they're pretty cool toys.

I am setting my brother up with a simple radio setup in his 1989 fulsize chevy truck and I was going to mount a 102" whip on the existing l-shaped firestik mount that is mounted on the tool box. I was wondering if the L-shaped mount would hold the whip in the wind? (sorry I dont know the number of the mount or anything) it is about 3 inches by 3 inches square and has 3 1/4 bolts holding it to the tool box. One more question. Will that toolbox be a good ground?

Mark,
The existing bracket 'may' be strong enough to hold
a 102" whip. The only way to be sure is to try it.
The metal toolbox may or may not be a good ground.
The best thing to do is to ground the box to the truck
bed/frame, if you don't 'need' it, the extra ground won't
hurt you. If you DO need it, it could really cause some
grief! Do NOT use 'braid' from coax as a ground strap
unless you 'tin' it! Better yet, use a copper 'strap'
for any kinda ground. The problem with 'braid' is that
it doesn't last to long. The weather, and 'junk' in the
air really does a 'number' on copper.
Good luck.......
'Doc

>
> tanks and army jeeps.

You didn't mention the antenna,if it's a 102" whip (good move) drill a
hole it the top surface of the bumper and use an inexpensive beehive
mount or just a stud mount.For other antenna s a hood mount bracket
works and the small holes are under the hood in the fender.
I drilled a hole in the middle of the cab on my brand new truck and
ran the coax inside the headliner then thru the "A" pillar molding on
the side oh the windshield.

For a short time, right before the move to channel 19 and
then just after the move, there was a serious effort by
some groups to 'split' the highway usage to two channels.

Use 17 for north-south, and 19 for east-west, or vice-versa.
They had all these 'justifications' for it. And issues of
interference at highway junctions and so on. A solution
looking for the problem.

But the move never caught on, and everyone sorta just
stayed on 19 and that was it.

They're actually pretty simple. In one case it's just a sweep
where you signal makes the 'bar' or 'line' thicker.

In the other case it's designed to show a 'modulation trapeziod'.
In that case, the RF is one axis, the audio the other. The idea
with this display is adjust your signal for the 'fullest' trapezoid
that you can.

Don't know that I've seen plans for one anywhere though...

A number of HAM equipment manufactures have offered them
over the years. So they usually show up at flea markets. Neat
toy, so they usually get what they're worth. But if you find a private
sale you might get a deal.

Well, sir; you're certainly entitled to say and think that.
But it won't change a thing. The only thing we *can*
change is our attitudes. We can sit here like schoolyard
bullies and kick sand at each other or we can find a way
to get along productively. I, personally, would rather
do the latter. I'm a big enough man to live peaceably with
someone- even if I don't agree with him- and I'm sure you are, too.
Life is way too short to go around making enemies
over something so trivial as this. So I'll continue to
abide by the "FA / FS" conventions, and wish you well as
you filter or simply refrain from reading such posts.

Kind regards,
Dave S.

I am thinking about buying a RCI 2950. I have known quite a few people that have had them in the past and have had only good things to say about them, hence my problem there has to be a down side to everything. Can someone give me the pros AND cons of this radio? and maybe some others that are comparable that address the cons of the 2950?
Thanks

>Russell

There is no problem having two ground rods close together. What is important, however, is that any additional ground rods must be bonded to the house electrical ground. That way, all the ground rods are at the same electrical potential. It's also necessary to comply with the current codes.

Two ideas:

1. There are brackets that fit between the hood and fender.

2. There are mounts that attach to a trailer hitch.

Neither would require visible holes.

brand,it is similiar to the one i run , I know it is BB's design, he may use
55's antennas and 55 helps him out greatly
but BB and I have a phone bill to prove we were both doing the testing. Of
course his mobile is also setup very well
very well from the tires to the load full of batteries to the 6 250's under
the hood to a worked motor
under the hood. he also spends the time testing antennas and amps thorougly
to there breaking point. The antennas work good but it is a total package
that
gets the trophy.

The "Dead Motor Maul" is nothing but a power supply, and instead of having a
n AC input to transformer, then to rectifier, then to the pass transistors,
you get just the pass transistors.

You actually come out cheaper sometimes buying a power supply, and just ripp
ing the regulator section out, rather than paying someone for a "dead motor
maul".

You are showing that you know very little of the CB amp market.

The AM / SSB switch in a cb amp just adds a bit of capacitance across the relay.

It does nothing to the signal in the grays.

In a Texas Star, the AM / SSB switch actually adds in an app. 3dB attenuator, so it works the amp LESS on AM when in the SSB position.

Few CB amps have switchable bias.

Lowanse,
If your going to use it on 10 meters, get one of the commercially made solid-state amplifiers. The average 11 meter solid-state amplifier is RF 'dirty' like you wouldn't believe (harmonics, parasitics, etc.). They cost more but are 'clean'. By the way, those harmonics, parasitics, etc, are why you can supposedly get higher outputs from the 'CB' amplifiers. If you clean the amp up, the output drops back to a 'reasonable' level, and you get rid of the TVI/RFI complaints too!
'Doc

For Sale No Name 32 pill (2sc2879) transistor amplifier.
Custom built for HIGH power long keydown time.
Heavy duty everything.
Custom Built by Stick Man owner of the No Name shop.
As you can see the amp is simply incredible.
This amp was just built and completely tested ready for blasting the
airwaves.
The huge thick heatsink runs the full length of the box.
Clear Plexiglas lid keeps people from drooling in your amp..
4 high power fans to dissipate the heat quickly.
Quiet operation.
Variable input tune control.
SSB delay switch.
Heavy duty power leads.
100 watts in will give proximally 1000 out 200 in 2000 out and so on.
Well over 5000 watts can be achieved with the proper voltage and amperage.
Buyer pays shipping and insurance
Approximate weight 55 pounds of devastation.
Remember this is a Heavy Duty High quality custom built amp designed for
Keydowns incorporating a
2 oz copper circuit board Wakefield heat sink 16 High power caps 1
massive relay and 2 handles
Unit will take up to 20 + volts and need a minimum of 550 amps.
$2,500
Visa and Master card accepted.

The United States Coast Guard does not currently monitor the CB radio
frequencies. If one needs to contact the Coast Guard, it is strongly
suggested that one use a marine radio.

> nice people that is interesting for free and not have to have repeaters and all
> that stuff?

Well, lets throw that around for a while. As a ham operator, you can choose any callsign you prefer (vanity callsigns). In addition to choice of callsign, you can call yourself anything you want on the radio (go by whatever name you want). So much for that part of your argument.

Yes, a ham radio can be expensive (while there are low cost radios out there, most ham radio equipment will cost more than a CB), but these radios also offer a greater range of capabilities (extended frequencies, etc.) and features (dual VFO's, memories, etc).

Well, I guess you have me on the part about studying for a license. It does take a little time to study for the license. But the license test is rather simple, so I'm sure most people could pick up the information in a short amount of time. Only a really dumb person would find the license test a real barrier.

As for the rules, I (and thousands of other ham operators) have never had any problem with the rules. Most of them are simple common sense, and it makes sense to abide by them since they benefit me just as much as the next person.

As for the repeaters, you obviously have no idea what you are talking about. You probably use a version of a repeater everyday with your cellular phone. A repeater allows a inexpensive handheld radio to realiably communicate over distances that a CB operator can only dream about (the key word here is "reliably," not the occasional skip).

CB has its place, my friend. But so does ham radio. I enjoy both for what they were designed for and are best at. I don't try to change one in an futile effort to make it more like the other.

So, fix the problem. If anyone has his actual name and address, post it here. Otherwise, everyone scattered around the country can post a relative signal strength here along with their approximate location and that will zero him in to a town and then you guys, whereever you are can DF him him down to his front porch. Seems real easy if you want to take the time.

Bean, after reading that message above, it scares the hell out of me to think that you actually might be a police officer, but I'll take your word for it if you insist.

As a police officer, you should know that local law enforcement all over the country has been seeking authority to police illegal radio activity for many years.

Each year, police stations around the country receive thousands of complaints concerning illegal radio activity (interference with their own radio systems, with local commercial radio systems, and complaints from residents who are not able to enjoy television or the telephone in their own home).

Such laws already exist for other types of interference with a person's right to peacefully enjoy his home. For example, if a person plays his sterio too loud, the police are routinely called to handle the matter. The proposed laws would extend that to include a person using electronic communications equipment to prevent a neighbor from peacefully enjoying his home (especially when the electronics equipment is illegal).

It would not require a electronics expert to enforce the law in most cases. A neighbor complains about a neighbor with obvious radio equipment in his premises (an antenna in the yard) and a search of the premises yeilds an illegal linear (a CB operator cannot even legally have a linear present on the premises). That in itself would be enough for a conviction in most cases.

In more difficult cases, a radio expert can be called to the scene (most police stations have a contract with a local radio expert to maintain the station's own radio equipment).

In most cases, the police officer would not be enforcing federal laws (FCC rules), but recently passed local legislation designed to provide the officer with the framework for enforcement in this area.

Don't dismiss this new legislation too lightly, bean. If passed, it will have a profound effect on CB radio.

butter_bean_mobile@my-deja.com wrote:
>
> I care about my beat the people, there safety, property, basic peace.

So, as a police officer, when you are called by someone who is complaining that his family cannot watch television, or talk on the telephone (including to call 911 or the doctor when their child is sick), you would tell him what? Go away, you're too busy? You don't want to be bothered?

If this new legislation is passed, and your local community decides to go after illegal radio operators when a complaint is received, you will enforce those laws, Bean. If not, your career in law enformcement is going to end shortly thereafter.

Of course, once your department finds out about the unlicensed radio equipment you have in your home, your career will be over anyway. All it will take is one call from a neighbor or ex-friend.

I don't think so.. as long as it's not being used and not in a state that it could be used, (such as hooked up in line with your CB) there's nothing illegal about it. Next you're going to say a CBers without a ham license can't possess an all mode transceiver designed for use on the ham radio bands...

Look at the rules, my friend. Unless they have changed recently, if a complaint is made, the simple fact that you have a linear on the premises is sufficient proof that you have used it. In the old days, if you didn't have a license to legally use that linear in another radio service, the FCC could confiscate it on the spot. I doubt the rules have changed that much today.

In fact, as I was writing this, I decided to check it out. Sec. 95.411 says...

(a) You may not attach the following items (power amplifiers) to your certificated CB transmitter in any way:
(1) External radio frequency (RF) power amplifiers (sometimes called linears or linear amplifiers); or
(2) Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.
(b) There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
(c) The FCC will presume you have used a linear or other external RF power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station with more power than allowed by CB Rule 10, Sec. 95.410.
(d) Paragraph (c) of this section does not apply if you hold a license in another radio service which allows you to operate an external RF power amplifier.

Read the original paragraph I wrote. I said that the police search was the result of a neighbor's complaint of interference. Under those terms, I stand by my original statement - a CB operator would be in

trouble if a linear was found on the premises.

And yes, if there were evidence that you had used that all mode transceiver, the fact that it is present would be evidence against you unless you are licensed to use it. A simple complaint by someone, and the radio in your home, is proof enough to show that a violation has occured.

Thanx to all who replied. I plan to upgrade to a 25 amp power supply
so I'll have plenty of headroom. I will let y'all know how my new
system works as soon as I get all the parts set up.

I used to have a little amp with the modulation scope built in to the amp. Horizontal plates connected directly to the modulation transformer. 304TL's in the modulator. Those were the good days of CB.

To: njmedman, et al.

Dwight is correct in what he said about the amplifiers
and 'all-mode' or mod'ed radios. Just haveing them in
your possesion (in the house) is enough to be in violation
of Part 95. Being 'in-line' or not has no bearing on it.
Having a ham license is one of the only legal ways for a
CB'er to own or have an amplifier that operates below
50 Mhz.
One other thing. I very seriously doubt if police
departments 'want' anything to do with enforcing 'radio'
complaints. The examples mentioned, interference to police
radios, broadcast radios, and other licensed services, are
exactly backwards of what the fact is. Local law enforcement
has NO jurisdiction in cases involving a licensed service,
only an un-licensed service (CB, FRS, etc). Only the FCC
has jurisdiction in cases dealing with a licensed service.
If you have a license for what ever radio your using, the
local law enforcement has no jurisdiction. (Been there,
done that, don't even want to think about it!)

>(1) It is in your possession or on your
> premises; AND
(2) There is other evidence that you have operated your CB station with more
power >than allowed by CB Rule10, Sec.95.410.

AND there is EVIDENCE that you have operated with more power.

Therefore, without specific EVIDENCE such as FCC monitored field strength
reports IN ADDITION to simply posessing, there is no grounds for discipline.

Dwight Stewart, you come here only to aggitate. Go away, and get a life.

Hello,

I am looking for an Astatic Golden Eagle microphone.
Here in the Netherlands is no CB shop that has that microphone in stock.
So i need an address from a CB shop that also ships abroad.

Thanks for reading this message.

Good DX and for those interested. A lot of stations from the USA are coming
in here on my shortwave receiver the
last couple off days.
Mostly on frequencies 27.465 and 27.475 lsb.
A picture of my shortwave reciever can be found at:
http://www.casema.net/~ga3dhg

I would do my job. My point is that the FCC needs to do its own
enforcement.If they want us to do there job then we need money for it.
AS far as my illegal equiptment or unlicensed operation
once again you have no idea if i am legal or not. I bet you have a
moded scanner or some radio that will go out of band so unless you are
in mars you are breaking the law.

pros:
there cheap,
lots of channels,
lots of modes,
and easily convertable to cover all freqs.

cons:
not built solid,
very low quility control,
they do crazy things when pushing buttons like roger beep or channel up or
down,
almost no adjacent channel rejection,
not good for mobile but make a nice base if you dont have close neighbors with
radios too

>
>I am thinking about buying a RCI 2950. I have known quite a few people that

> CB had channel restrictions.

We had a few channels in my area that we very formal with regards to 11 meter rules and regs. In about 1966 the formality started to disappear and the amps (Collins, Swans, and D&A's) started to appear, however these larger were an exception. Most of the amps making it to CB in my area were old homebrew ham amps from the 50's with either one or two 807's or 6146's for finals, or small commercially manufactured amps using 6LQ6's.

My first mobile setup (1965) was a 5 channel Johnson Viking (whitface) under the dashboard going into a homebrew amp with an 807 heater. The amp was powered by a WWII surplus P-103 positive ground Dynamotor (with polarity reversed) that could produce .16ma @ 500v. It was like driving down the road with a vacuum cleaner on in your trunk. I then recrystalled a 33Mhz RCA Carfone for CB use. These radios were previously used in police cars in my area and they had a 3' x 2' x 10" cabinet that was made of 1/8" plate steel. This radio kicked some serious butt. I ran twin top loaded whips on the rear of a 58 Impala.....Lotsa memories.....

"pass" transistors? Where are you going to find transistors that will pass
200+ amps? Unless your talking about multiple transistors or SCR's. They
must use a decent heat sink in those Motor Mauls as well

They sound kind of neat. I guess there only as good as the reserve time on
the batteries.

The bill that would allow local police to enforce FCC reg. was not passed.
that is long gone. Anyway, the police don't have time to go to calls about
cb's.

The bill that was brought into congress, allowing local police to enforce FCC reg. will not happen. The bill was turned down. Anyway, the police don't have the time to go to cb calls. It won't happen, so for you cber's that run anything illegal, you don't have to worry about your local department.

The key word here is "AND." Possession of the linear by itself is NOT ample
evidence for prosecution. There has to be evidence of it's usage.

Again, this is NOT sufficient proof of usage. Legal, 4-watt CB signals can and
do cause significant interference to many types of consumer electronics. The
reason is because of the poor (or non-existent) filtering in these devices.

>either. Another 'not bad' idea' is to keep at
>least one extra set of fuses in the glove-box.

I'll do that. I'm a newbie to this cb area and just downloaded and printed out the manual for the technician license. I'm going to get the one with code. I went to ARRL and ordered the cdrom in order to learn the code. I want to stay legal as far as the channels are, but may push the output just a tad. I bought the 2970HP which has many channels I cannot use. I'm hopefully going to spend a great deal of time in the CW area.

No point in reading if you can't write.

Althought local enforcement is not done, disturbing the peace is
enforced.

Crank out 2000 watts, interfere with local listeners of "Broadcasts"
and you will find your equipment behind a steel fence until a judge
decides the matter locally. No enforcement here of FCC rules, only
enforcement of peaceful coexistence.

>I don't want to defend this guy in any way. But notice the same old
>"we say you are guilty therefore you ARE guilty.

Not so. A Notice of Apparent Liability is just that -- it says
"you APPEAR to be liable for a monetary penalty because...."
This is no different from any other administrative or crininal
charge.

If the accused does not "plead guilty" by paying the penalty,
the burdens of going forward to an agency evidebtiary hearing or
a court trial and proving the offenses charged is always on the
government.

An intermediate step is to allow the accused to tell
his/her side of the story to allow the reviewing official to
mitigate or cancel the penalty before proceeding to trial/hearing.

>Now YOU prove you are not.

See above.

>And, oh yes, we get to confiscate and you try to get it back"

Urban legend.

The FCC does not CONFISCATE equipment.

The US Code allows equipment to be SEIZED by the US Marshal
only when ordered to do so by the U S District Court. In
practice the court will not issue the warrant unless the FCC
proves its case beforehand. The U S Attorney must institute
formal proceedings in court to have the equipment FORFEITED,
and the government must prove that the equipment meets the
requirements of the Code for forfeiture - equipment used in
violation of radio law or equipment that does not have required
type authorizations. Of course, the owner of such equipment
gets a "day in court" by being given the opportunity to tell the
court why the equipment should not be forfeited. It is then up
to the judge to decide whether the FCC has made its charges or
not. The reason that very little seized equipment is released
back to the owners is an indication thst the FCC gets the
accused "cold".

>Where is innocent until PROVEN guilty?
>Doesn't that require a judge of some sort? Where is the old fashioned

>process of accusation, trial, decision, judgement, assigning punishment?

It's all there.....always has been. See above.

nope, the local authorities have nothing to do with radio transmission. Only
the local FCC. The city will not handle stuff like that.

It will not pass. Local enforcement has too much on their hands already.
They would not like having to deal with radios.

Nor is a neighbors complaint a legal bases for search. It takes more evidence
than that to get a warrant to search a crack house.

Currently there are 2 Golden Eagle mic's on eBAY. http://www.ebay.com Search on Astatic Golden Eagle to find them. One is brand new and the last bid I saw was $225 and he does ship worldwide. The other one is a used but very good condition and the last bid I saw on it was $92. Good luck.they are beautiful and great sounding microphones. 73 / DX

For a photo of my Limited Edition Diamond Eagle D-104 check out the Equipment Photos page of my website.

Go to Albany, NY, crank out 2000 watts, have someone call and
complain to local law enforcement and watch your equipment
as it gets seized and stored until a court date.

I don't know where you are from, but if you interfere in "broadcasts"
in upstate NY, you will pay the price. "Locally".

have a cobra 2000gtl its been modified years ago with variable power and extra frequencies.recently the cchannel display has been staying on and lighting dim when the power is off,except when the switch was in sideband mode then it would shut off.this wasnt a major problem and didnt seem to affect the radio even though somthing wasnt right either in the am side or the channel display board.Now the other day i turned it on it worked fine as usual talked on it on am for 15min or so and lost all power but approx 1 watt and when i modulate it drops back to almost o watts. Whatever happend also affects sideband the same.I have my doubts its the final trans the c2166 or the c1969 but open to suggestions could it be the tr41 my service manual says it should be an ecg 152 but i believe if im looking at the right part mine has a 291 im no technicion and could use some help really enjoy talking on the radio and am missing it. thanks alot jeff in ne.

Jeff,
It doesn't 'sound' like a transistor. Usually, when
they 'go out', they do so all at one time. From what
you described, sounds like something in the power supply
section, or maybe a voltage regulator, or dc/dc voltage
converter(not power supply). Look and see it anything
is obviously 'charred/distorted/discolored'.
'Doc

Up until 1975, the truckers east of the Mississippi, used channel 10.
West of the Mississippi used 19. In 1975, partly to consolodate truckers
to one channel and also responding to complaints from REACT channel 9
stations, the eastern truckers moved to 19, where it's been to this day.

I happen to like the 2950's. they sell good and I already know
what problems are going to jump up and they are loud. they
also make a great starter rig for new tech's. sure they leave
alot to be desired in alot of areas. but for the money, there
the best bang for the buck. most of the new Hams can't afford a
12-15 hundred dollar rig. and you will enjoy the hobbie much
more if you start small and work up.

Simple interference is not proof that a linear was used, since
interference can happen at legal power levels under certain conditions.
There would need to be "other" evidence.

> is illegal).

But who's rights will be infringed now? If you force a LEGAL radio
operator to cease transmitting because his transmissions interfere with
a poorly designed "K-Mart special" stereo, you are denying his right to

pursue a radio hobby. Until the FCC forces manufacturers to adhere to tighter RF immunity standards, radio operators will be left with the burden of defending themselves against interference problems caused by poor consumer electronics design.

> It would not require a electronics expert to enforce the law in most
> cases.

Yes it would. Most Cops are not trained in radio matters. Most cops wouldn't know the difference between a linear and a receive pre-amp.

> A neighbor complains about a neighbor with obvious radio
> equipment in his premises (an antenna in the yard) and a search of the
> premises yeilds an illegal linear (a CB operator cannot even legally
> have a linear present on the premises). That in itself would be enough
> for a conviction in most cases.

What if there is NO linear? What if he's LEGAL? How would a cop be able to determine that without proper RF training? The short answer is, he can't.
What happens next could elevate to RF gestapo tactics. I can see the law being abused to the point that even legal CBers and Hams get forced off the air simply to "solve" an interference problem. Think that can't happen? Think again. Cop issues a "cease and desist" all radio transmissions. YOU, as the legal radio op, now have to hire legal representation to fight for YOUR RIGHT to use your radio.
A poor CBer, (or ham) that doesn't have the money to fight the case, will have no choice, but to obey the citation, and say goodbye to his radio hobby, or risk jail time.

> In more difficult cases, a radio expert can be called to the scene
> (most police stations have a contract with a local radio expert to
> maintain the station's own radio equipment).

And who pays for that? And what if the "expert" finds nothing wrong with the transmitter, yet the interference "problem" still exists? The neighbor will want results. What do you do in this case?

> In most cases, the police officer would not be enforcing federal laws
> (FCC rules), but recently passed local legislation designed to provide
> the officer with the framework for enforcement in this area.

Laws that have the potential to lump all radio operators in with "Lawless freebanders", regardless of circumstances. There seems to be a stigma among those ignorant to radio, that only illegal operators cause interference. Such is certainly NOT the case.

>
> Don't dismiss this new legislation too lightly, bean. If passed, it
> will have a profound effect on CB radio.

And any other form of radio hobby as well..... Which is not necessarily a good thing.

I'll bet its the 2sc1969. its shorted and what your seeing is
the driver. don't think its tr41 or the ssb would be ok..
there is a cure for that counter problem, i can't remember what
it is though. i'm not in the shop but at home while answering
this....

I agree to some extent,in some ways the HTX 10 is better and in some
ways it's worse,and its only $139.
As far as HF rigs there are new 100 watt units covering 10-160 meters
for $600-$1000 and they make the RCI look like junk.

It us very hard to switch the bias from positive voltage and then go to ground on an amplifier with more than two transistors, I have "seen" it done with a small relay at each xfmr on an 8 pill base amplifier, the two pill section driving the 8 pills was done the same way, I don't know why it was done this way but it was, it was a homebrew someone had done.

> moded scanner or some radio that will go out of band so unless you are
> in mars you are breaking the law.

Obviously you would do your job. While I agree that the FCC should police radio, it is only a matter of time before a law is passed that will change that. It may not be this specific legislation (discussed in this thread), but it will eventually come.

My point is that since you already enforce laws similar to this (the loud sterio), it is not that much stretch to see police officers enforcing laws about the radio that disturbs the neighbor.

As for your equipment, you mentioned in a previous message that you were using two Rangers. Since these radios are not type-accepted for CB use, you're not running legally. That was the basis for my comment.

Since it appears to be a concern, let me point out that I'm running totally legal, Bean. I have a CB radio (Cobra 2000) that is unmodified in any way. Yes, my ham radio has been modified. But, since I'm a member of the United States Coast Guard Auxiliary, and the radio is used in connection with that, that (MARS/CAP/USCGA) modification is totally legal. My ham handheld is also used as a scanner, and it has not been modified.

By the way, it is interesting that several people have assumed that I'm in favor of this legislation (I have received several nasty email messages). While I have commented on your argument that you would prefer not to enforce such laws, I have not stated any position on the legislation itself. It is amazing how fast people will jump to conclusions before knowing the entire facts.

> reports IN ADDITION to simply posessing, there is no grounds for discipline.

It does not require a field strength meter test, and an audio expert
to operate it, to enforce laws concerning sterios that are too loud.
The simple fact the a complaint is made, the police officer hears the
noise, and he uses his ears to discover that the noise is coming from
your home, is enough evidence to enforce these laws.

The same would likely be true for the radio. The fact that a
complaint is made, the officer confirms the complaint (hears the
interference himself, for example), sees an antenna on your house next
door, discovers that you have a radio (linear, etc.), and that the noise
stops when you stop transmitting, would probably be enough evidence in
most cases.

In other words, the fact that you are causing unusual interference
with your neighbor's electronics would probably be enough to enter your
premises. The addition of a linear found on premises would be further evidence.

> Dwight Stewart, you come here only to aggitate. Go away, and get a life.

Sir, I came here to give my opinions in an open discussion in this
open newsgroup. Those opinions are honest and ligitimate. The fact
that you don't like my opinions is not really my concern. And I'm
certainly not going to go away just because you don't like something I
have said.

In other words, son, the problem is yours. If you don't like people
who disagree with you, I suggest that you rush over to some third-world
country, quickly take it over, and set yourself up as a petty dictator.
Then you can have people all around you that agree with you.

But, here in America, we all have to freedom to say what we want.
And, thankfully, we don't have to listen to petty little people who
think they have the right to run people off who disagree with them.

Good day, sir.

Constitutional feelgood fuzzies be damned, the glitch in the system is
that an accused private individual does not have equal access to the
legal expertise behind his defense as does the gummint in it's
prosecution. It strikes me that an accused perp who makes $30k/annum
and has to pop $10k in legal expenses in his effort to keep his butt
out of a sling is coming from 'way behind in a brawl against an
accuser whose budget next year will be $1.8 Trillion. Give or take.

I am not familiar with that particular radio but I suspect it is on the right side about half way back. It is mounted on the side of the chassis. I do not know how you can say that it is bad when you have not made any voltage measurements on the pins of the IC. There are many things in the radio that can cause a loss of audio.

I have had 3 RCIs, 2 2950s and one 2970. They are easy to modify so the radio is great if you want to learn about the circuitry but the receive sucks, no adjacent channel rejection. You can make them swing if you need to drive an amp. Basically, if you don't plan on getting inside of one I would recommend the new RCI 6300 series or the 2950DX. They use a completely different design and they fixed the receive problem. But, everything is surface mounted so don't plan on getting inside to make circuit changes. They can be modified for 11 meters too.

6717. FS" Three Programmable Scanners: ALL LIKE NEW !!

Newsgroup: rec.radio.cb
Date: 2000-03-31 00:00:00 UTC
From: klarrg@aol.com
Message-ID: <20000330210957.16004.00000146@ng-cj1.aol.com>
Source record: 29336

Have 3 scanners for sale. ALL are as-new, mint condition physically AND electronically w/ all accessories...
1.) Radio Shack PRO-2037, 200-channel base w/ 800 Mhz (no cell).29-54/108-174/380-512/806-956Mhz. Includes box, manual, and antenna. $140

2.)Radio Shack PRO-2045 ,200-channel base w/ 800 Mhz and MILITARY AIRCRAFT BAND plus CTCSS TONE BOARD.30-54/108-174/406-512/806-956 Mhz. W/ box, manual, and antenna $165

3.) Bearcat BC-855xlt base, 100 channels, FULL 800 mhz INCLUDING CELLPHONE BAND.29-54/108-174-406-512/806-956 Mhz . NO box, but manual, antenna, and power cube. $145

Add $10 INSURED PRIORITY S/H per radio. Money order only please, for payment.If questions, Email me at : Klarrg@aol.com

Would consider trade for YOUR Bearcat BC-8500xlt scanner in good condition (must be ELECTRONICALLY EXCELLENT, but slight worn PHYSICAL appearance OK.). Email if interested. THANKS !!!!!!! (<:

People post the FA notices in the groups because they are effective.

Go try to fight it, but under those circumstances it's like pissing into the wind.

: it has ALWAYS been channel 19.

Not true. I remember in the 70s when truckers ran primarily channel 17.
That was in the days of 23 legal channels - the side-banders ran mostly
16L.

There were regional channels as well - channels 10 comes to mind.

Dwight Stewart <stewartx@sccoast.net> wrote:

: Look at the rules, my friend. Unless they have changed recently, if a
: complaint is made, the simple fact that you have a linear on the
: premises is sufficient proof that you have used it. In the old days, if
: you didn't have a license to legally use that linear in another radio
: service, the FCC could confiscate it on the spot. I doubt the rules
: have changed that much today.

Not true. If there is supporting evidence, such as the FCC monitoring
illegal power transmissions from your station, THEN having a linear in
the house means that you are "presumed" to have used it. It is not
"proof", even then.

The FCC has never had the authority to confiscate a linear, simply because
you were not licensed to use that linear.

Yes, I have read the rules - and am well familiar with them.

: In fact, as I was writing this, I decided to check it out. Sec. 95.411 says...

... deleted ...

: (c) The FCC will presume you have used a
: linear or other external RF power amplifier
: if--
: (1) It is in your possession or on your
: premises; and
: (2) There is other evidence that you have
: operated your CB station with more power
: than allowed by CB Rule 10, Sec. 95.410.

Which shows that your original claim is false. "Other evidence" is not,
and never has been, complaints from neighbors.

: Read the original paragraph I wrote. I said that the police search
: was the result of a neighbor's complaint of interference. Under those
: terms, I stand by my original statement - a CB operator would be in
: trouble if a linear was found on the premises.

Not according to the FCC regulations. For that matter, the police do
NOT have the authority to confiscate CB equipment. They are not Federal
Officers.

: And yes, if there were evidence that you had used that all mode
: transceiver, the fact that it is present would be evidence against you
: unless you are licensed to use it. A simple complaint by someone, and
: the radio in your home, is proof enough to show that a violation has occured.

Wrong. Ask the FCC. Don't go by what you imagine the regulations consider "evidence".

What filters? Many people still use newsgroup readers that can't filter out posts.

In any event, the problem I have with this is that one has been told that there is a specific newsgroup for these things - posting sale, auction, or wanted items elsewhere constitutes spamming of the non-sale newsgroup. That's the real problem as I see it.

Also note that this was originally posted to 5 newsgroups, where the remaining 4 that are in this reply do have a policy that says that sale messages are appropriate ONLY to "rec.radio.swap" and NO OTHER "rec.radio" group to which this is posted (plus others).

6725. Re: Local enforcement

Newsgroup: rec.radio.cb
Date: 2000-03-31 00:00:00 UTC
From: Bill Nelson <billn@spock.peak.org>
Message-ID: <8c18b5$n9u$4@bashir.peak.org>
Source record: 29344

W5LZ <w5lz@oio.net> wrote:

: Dwight is correct in what he said about the amplifiers
: and 'all-mode' or mod'ed radios. Just haveing them in
: your possesion (in the house) is enough to be in violation
: of Part 95. Being 'in-line' or not has no bearing on it.
: Having a ham license is one of the only legal ways for a
: CB'er to own or have an amplifier that operates below
: 50 Mhz.

Sheesh. How can so many Hams, who usually obey the laws pretty
thoroughly, misunderstand such a simple regulation.

Anyone can own all the linears and out-of-band transmitters they
want. As long as there is no evidence that they are using them
illegally, they are not breaking the law.

If you don't believe me, call up your FCC inspector - and ask him/her.

: One other thing. I very seriously doubt if police
: departments 'want' anything to do with enforcing 'radio'
: complaints. The examples mentioned, interference to police
: radios, broadcast radios, and other licensed services, are
: exactly backwards of what the fact is. Local law enforcement
: has NO jurisdiction in cases involving a licensed service,
: only an un-licensed service (CB, FRS, etc). Only the FCC
: has jurisdiction in cases dealing with a licensed service.
: If you have a license for what ever radio your using, the
: local law enforcement has no jurisdiction. (Been there,
: done that, don't even want to think about it!)

Local law enforcement has no jurisdiction over unlicensed services
either. CB and FRS are regulated by the FCC - whether it requires a
license, or not, to use one of these services is immaterial.

Question <no@spam.net> wrote:

:>nope, the local authorities have nothing to do with radio transmission. Only
:>the local FCC. The city will not handle stuff like that.

: Go to Albany, NY, crank out 2000 watts, have someone call and
: complain to local law enforcement and watch your equipment
: as it gets seized and stored until a court date.

: I don't know where you are from, but if you interfere in "broadcasts"
: in upstate NY, you will pay the price. "Locally".

If it happens, it is simply because the local judge is stepping outside his
legal jurisdiction to prosecute federal law.

It will keep happening, until someone appeals such a conviction - then such
actions will stop.

The police can seize anything they want - whether they have legal right to
do so or not. You can thank our RICO statutes for opening the door on that
abortion of justice.

> not apply if you hold a license in another
> radio service which allows you to operate
> an external RF power amplifier.
>

Gotta have that proof that the linear was used, and if you're a ham and it's not hooked up to your CB or if you just have it sitting on a bench, you're set..

> Read the original paragraph I wrote. I said that the police search
>was the result of a neighbor's complaint of interference. Under those
>terms, I stand by my original statement - a CB operator would be in
>trouble if a linear was found on the premises.

They can't search just because of a complaint of interference.. that would require a consent search or a search warrant.. again.. the CB operator would not be in trouble for having the linear unless it can be proved that it was used with the CB..

yes its a grounding prob. ground everything together and then to
a ground rod....D-104's are bad for this when there is a little
loose rf floating around in the shack. sometimes the cure is as
simple as a couple of ferrit beads on the audio lead....or maybe
a .01 to ground on the audio lead. or both....and if you do have
a D-104 try grounding the mic to the radio....

I think you're right on the mark, John!
Those that already have the EXPENSIVE equipment are already
pirating on these bands. The other's aren't so willing to
shell out the bucks in the name of pirating fun.
Not a whole lot is going to change, IMHO!

Find someone with a freq. counter or someonne with a radio that has a feq counter (i.e. Galaxy 99, HR2510, ect...) and just go from there and write down what all the cannels and the freqs. are whith the switches fliped. I had to do that with a 148 I had on time. Good luck.

A 5 Amp would work great for a Cobra 148
But if you get any amplifiers for it I suggest a 10- Amp
Radio Shack has good prices for these.
But I almost blew up my amp and radio and power supply because the Power supply
was only 3 amps and I couldn't use my amp on high

What kind of antenna are you going to use? I recommend the 102" whip
for that truck. Mount it in the center behind the cab. If you have a
tool box back there it makes for easy mounting.

As far as radios go I went the cheap rout and got a ProStar 400. It is
an excellent radio for the money, and is a lot smaller than other more
expensive models. It has SSB and goes between channels, and it can be
easily modified.

I have made many DX contacts with the stock radio, from here in NC to
Australia when conditions are good. I have a Wilson 1000 mag mount
centered on top of a 4 Runner.

However, that ProStar 400 is giving me some intermittent trouble with
the volume control.... No big deal yet, but time will tell.

irondogg,
Sounds more like an RFI problem to me. When the modulation,
or mic gain, is at a 'normal' level there is no problem. When
you really 'bark' at it (or over drive/over modulate), you have
the problem. Over driving/modulating 'broadens' your signal with
spurious emissions and these RF products are 'getting' back into
your radio causing the squeal. To reduce the squeal, reduce the
'modulation', thereby reducing the spurious emissions. It certainly
wouldn't hurt to make sure the mic, radio, etc., has a good 'RF'
ground. A ground rod isn't necessarily a good RF ground. A ground
radial system IS a good RF ground. Keep the ground rod, it is
a good electrical ground.

6757. Dual rig problem

Newsgroup: rec.radio.cb
Date: 2000-03-31 00:00:00 UTC
From: mickey <mickeyNOmiSPAM@mickeys.co.uk.invalid>
Message-ID: <0dcda8d0.73286734@usw-ex0103-086.remarq.com>
Source record: 29376

Is there a way of running two rigs off one antenna, without one of the rigs being shut down? My problem is I have a shop and an apartment, and I want to have a rig set up in the shop as well as the apartment, without erecting another antenna. Anyone offer some advice?

Cheers Mickey

Dwight, by now it should be obvious that the majority of this newsgroup advocates illegal CB operation. The opinions that have been expressed here come from organized freebanders, competition amplifier makers and users, cb equipment dealers, and more than a few anti-government, armageddon-obsessed survivalists. Note that they ALL have a stake in keeping the 11 meter band in its present unregulated and chaotic state, even if it means that a growing number of general public must suffer from interference and have no recourse to prevent it.

6759. Indiana stations?

Newsgroup: rec.radio.cb
Date: 2000-03-31 00:00:00 UTC
From: pmunsel@aol.com

Source record: 29378

Hello, I am interested in making contact with stations in Indiana either AM or SSB. I need to know frequencies, and times most are on or listening. I should have a 3 element Cushcraft beam up soon horizontally polarized, and now have an Antron 99 in use. I am from there originally, and figure with the conditions, maybe I can make a few regular contacts. I was born and raised in Shelbyville, and now reside in Central Texas (20+ years). Any help is greatly appreciated.

You might try one of the duplexers sold for Ham Radio. There are several available, and I use them for VHF as well as some of my HF stuff. You run the two radios to it, and then a single lead on to the antenna. Check some of the Ham store sites.

If I could have collected fees for work that I did "pro bono"
(for free) for legal clinic clients as well as three specific
organizations who live on volunteer labor, I wouldn't have had to
have any other paying clients to keep the office going.

I don't even want to get into those clients who were glad to
get the legal services at affordable rates but skipped out on
paying the bill.... that's when I learned to do business "on
the CUFF" (Cash Up Front First).

Misinformation.

ANY person who does things regulated by the agency is subject
to administrartive proceedings shether they have a license or
not.

Administrstive proceedinhs ARE due process - one is given
notice of the offense and the opportunity to respond and
present evidence in his/her behalf as to why the proposed
penalty should ne mitigated (reduced) oe cancelled. If you
mean "court proceedings", the results of administrative
proceedings can be appealed in the courts if the accused feels
that the Administrative Law Judge did not follow the rules.

>All good reasons not to get a federal license in the first place. It
>is the voluntary license that allows the assault on hearth and
>home with the 'forfeiture' of equipment.

More Misinformation.

Unlicensed operators are subject to sesrch and seizure by court
order (warrant) just as licensed operators are. In fact, the
prima facie case necessary to secure the warrant(s) is a lot
easier to make when the person is unlicensed.

I myself don't know too much about foxie or skullcracka. I do however own one davemade (m200) and two x-force (an x400 and a 16 pill). I have had a couple of x-force amps and i like them a lot. I also cannot say anything negative about the dave amp. I choose to stick with x-force simply because i know them and if anything goes wrong they will get it handled for me. Seems to me that from reading this newsgroup that the davemade team is kind of hard to reach.....At any rate, that is my opinion

Both of the responses above are probably correct and really talking about the same result, RF feedback. Bad grounds can cause RF feedback. And the second message, he is describing RF feedback. I have had 3 RCI rigs in two vehicles and had to solve the RF feedback in all cases. Bead chokes on the mic wires at the mic are your best bet then the decoupling capacitor, .01uf to ground.

> impedance.

Believe it or not, it really doesn't.

With unbiased s/s amps, for all but a small
percentage of the time, the input signal
forward biases the transistors. The input
impedance and balance between pairs of
transistors is the worst when the input
signal is too small to forward bias the
transistors. In other words, the input
impedance and balance between transistor
pairs is the same in a biased amp as it
is in a normally (or higher) driven un-
biased amp. Adding bias to an unbiased
amp actually stabilizes the input impedance
and balance between transistors. The
downside is that the amp can't be driven
as hard, used with high (competition level)
collector supply voltages, or used as a
"moulator."

> I was looking at this a long while back and came to the
> conclusion that the slight increase in efficiency was not worth the
> trouble it would cause to input vswr and added cost.

The increase in efficiency only applies to
small (less than is required to cause gain
compression) signals. In CB circles, not having
enough drive power to cause gain compression
is rarely a problem.

As for applying bias to each transistor or
each pair of trainsistors in a multi-pair
amp; it's overkill to do so since the amp
only needs to be biased to Class B, and the
use of matched sets of transistors (or at
least ones that are all from the same lot)
is a given these days. In other words, a
single bias supply that applies the same
voltage to all the transistors in each stage
(and that can be switched in and out) can be
used with good results.

I would suggest the 2 meter band of the Amateur Radio Service. No morse code is required for a No-Code Technician license.
Radio Shack sells great performing 2 meter radios and you could easily talk the 20 mile distance either simplex (direct radio-to-radio) or through a repeater. My wife and I do this exact thing everyday. Check in your area for Ham radio club and they can get you pointed in the right direction.

A 20 mile distance in city conditions for legal CB is a stretch at best. A cinch however for 2M amateur radios.

Maybe so, Phil, but you have to admit that they don't risk losing
their license. :-)

Another solution might be to use a simple coax switch available at Radio Shack. Just hook your radios to the 1 and 2 connections, and the antenna to the Out connection. Label the connections with Shop, and Apt, then check the switch whenever you want to operate, to make sure the right one is selected. Not sure if a VHF/UHF duplexer will work, since CB is on a much lower frequency. Be careful, if both radios are on and you transmit on one of them you will fry the receiver in the other one!!

And these dimwits know that, but they what to come to the discussion groups and post their ebay teasers there too so they can make sure they shove it in you face so you will see their ad. They know that eveyone is not interested in the junk they have to sell and may not read the .swap groups, so they want to make sure you see the ad. They are not interested in courtesy or using common sense (can't use something you don't have), they just want to hawk their junk.

Dave Hall wrote:
>
> Simple interference is not proof that a linear was used, since
> interference can happen at legal power levels under certain conditions.
> There would need to be "other" evidence.

First of all, Dave, there is no requirement that there be proof that a linear was used. The requirement only states that there has to be evidence that excessive power was used. In that case, if a linear is found on the premises, it is evidence that it has been used (even if it is not hooked up at the time).

In most cases, excessive, or unusual, interference would be evidence enough that excessive power was used. For example, the FCC routinely sends out notices of apparant violation using just complaints of interference as justification. This happens whenever there appears to be a case of unusual interference, such as numerious complaints made by several individuals.

It is clear that the FCC considers excessive, unusual, interference as evidence that excessive power has been used. If a follow up investigation turns up a linear, those two things are enough to meet the requirements of the rules.

Don't misunderstand the point that I'm trying to make. Clearly, everyday interference caused by legal radio equipment to poorly designed consumer electronics, is not a major issue for anyone other than the parties involved. The new ligislation does not have any effect on this.

Under the new ligislation, if a police officer receives a complaint of interference, and there is no obvious illegal radio activity, the issue would be handled by the parties involved (or the FCC). The police would end their involvement at this point.

The new legislation only allows the local authority to take further action when it is obvious that an illegal radio activity is involved (a linear is found after an interference complaint it received, for example).

Okay, last time. The does not have to be proof that the linear was used, only that excessive power was used. Excessive, or unussual, interference is often enough evidence that excessive power was used. If there is evidence of excessive power, there is evidence that the linear had been used.

If you read back over my original message, I said that a linear discovered after a complaint of interference would be trouble.

Tim, you know that is a complete lie. I have never said that dx was impossible on 11 meters. The issue we were addressing at that time was a person's insane claims concerning the number of countries he had contacted (more than half the countries in the world using a simple mobile radio). I said that it was impossible for him to have contacted that many countries (especially using the equipment he described), since most of the countries he claimed were out of the range of CB even under the most ideal skip conditions.

Because I felf he had lied about the number of countries he had contacted, I went further to say that he had probably not contacted a single country overseas. It was at this point that you jumped in to attempt to twist the argument, and my words, into a debate about dx skip in general.

Read the poposed legislation, Dave. The legislation does not extend
any authority to local enforcement if legal equipment is being used.
The legislation would only allow the local police to take action if
there was an obvious violation (such as an illegal linear). In cases
where there were no obvious violations, the FCC would continue as the
ultimate authority.

What you think of idea of realization of radioexpedition on Southern Altai?

Southern Altai - highland is on the board of Kazakhstan, Russia, China and Mongoly.
Land of lakes and waterfalls, mountain taiga and stormy rivers, deserts and snowy peaks...
In time of Soviet Union this territory had been absolutelly inaccessible for foreign tourists (and furthermore for radioexpedition) - in locale
It is not enough of ham stations.

The base camp of expedition is planned to place in region by highest Fastigiums of Siberia and Altai of a mountain Belooha, lake Markakol and Zaisan.

If you were interested by our proposal, we can be found on ranges 21Mhz, 28Mhz call sign UN8JZZ (collective radio station)

Oh, good grief, Tim. Show me where it says in the Constitution that you have the right to totally unfettered, unregulated, use of a radio. Show me any law where it says that anybody has a right to use their radio anyway they want, even if the interference from the excessively overpowered radio infringes on the neighbor's right to the peaceful enjoyment of his home and property. If so, can I move next to you and send several thousand watts of microwave radio waves through your house, your wife, your children, or you?

The Constitution does not give you the right to do anything you darn well please, Tim. Your rights have to balanced against the rights of others (your neighbors, other radio operators, etc.). In fact, everything you do has to be balanced against the rights of others (including your use of a radio).

That is the country that our forefathers designed. A country where everyone has equal rights. A country where one person (either a member of government or a citizen) cannot simply walk over the rights of others.

At this time, the regulations concerning CB radio are simply not enforced. Many CB'ers have used that fact to abuse the radio frequencies (and the rights of their neighbors). Since some CB'ers cannot be trusted to control themselves, many people feel it is time for enforcement to return.

As I understand it, this legislation is dead. However, new legislation would be proposed in the future. Illegal CB'ers have created a lot of enemies over the years (and very few friends). These people are simply not to stop demanding that the government take action to put an end to the abuses.

It will be a sad day when it happens (legal CB'ers will almost certainly get caught in the crossfire). But it is almost inevitable at this point.

Again, you seem to misunderstand ham radio, Tim. It is not a race to get to the top. In fact, there is no reason to ever go beyond your interests (you have to freedom to choose those interests, and the license class you hold).

At this time, the technician license provides me with all I want out of ham radio. In other words, I'm enjoying the priviledges I already have.

My current interests centers around VHF/UHF and higher operation. I enjoy six meters for the occasional skip. I enjoy talking with friends on the local two-meter repeaters. I enjoy having reliable communications with my wife as we travel around town. I enjoy using my radio on the VHF marine frequecies in connection with my activities associated with the Coast Guard Auxiliary. And I enjoy satellite communications in the UHF bands.

When I want more, I'll make the effort to get another license class. Until then, I'm really very happy with what I have.

However, thanks for your concern about my ham radio activities. It is nice to know that I'm so important that others (such as yourself) try to keep track of my advancement (by the way, you still have the number of years wrong). I hope one day you have someone as concerned about you.

Hams sign a one-sided agreement with the federal government
that opens them up to administrative procedings thus bypassing
due process.

All good reasons not to get a federal license in the first place. It
is the voluntary license that allows the assault on hearth and
home with the 'forfeiture' of equipment.

Switching the bias on a s/s amp must surely screw up the input
impedance. I was looking at this a long while back and came to the
conclusion that the slight increase in efficiency was not worth the
trouble it would cause to input vswr and added cost.

He requested a 'base' solid state amp.

The few solid state commercial amp's that are made for the HF bands will cause one to have a coronary.

All, to my knowledge require an external PSU other than the JRC 2000 which I believe is no longer in production. Kind of overkill for 10/11m!

The MFJ 4-pill is junk.

That leaves the SGC, Henry and Ten Tec. All big money, and that's just for the 100A PSU!

Can you suggest exactly where he goes from here, a tube job maybe?

Phil Unit 148 / G4ZOW / UK

>noise, and he uses his ears

Nonsense. Stereo is obviously judged by sound, radio must be monitored with
equipment that can detect feild strength in order to PROVE excessive power.

>The addition of a linear found on premises would be further evidence.

Again, no proof unless proper equipment monitors excessive power.

>Sir, I came here to give my opinions in an open discussion in this

>overpowered radio infringes on the neighbor's right to the peaceful
>enjoyment of his home and property.

Again, the radio transmitter in question does not need to be "excessively overpowered." Back in the days before cable television when I was active on CB, I routinely took out TV Channels 2 and 5 within a 2-block radius of my house. I was also heard on home tape players, turntables, and even a neighbor's eledtronic organ. The "excessively overpowered radio" in this case was a bone-stock Midland 23-channel AM mobile on a power supply, feeding a 5/8 wave ground plane antenna on the roof.

> If so, can I move next to you and
>send several thousand watts of microwave radio waves through your house,
>your wife, your children, or you?

Happens every day. Not only that, but the government has passed laws which prohibit us from even monitoring these microwave radio waves as they pass through our homes and our bodies. They're called "cellular telephone transmissions."

Again, how is the average cop on the street going to be able to tell the
difference between a LEGAL radio and an ILLEGAL radio (export, 10m ham, etc.)
Unless you are specifically knowledgeable about radio equipment, a small base
linear looks a lot like an Astron power supply. If a cop mistakenly suspects a
LEGAL station of being ILLEGAL, he will confiscate the equipment and/or issue a
citation. The LEGAL operator then incurs the financial burden of having to
dispute the charges against him and get his equipment returned.

Don't think this can happen? Ask the teenager in Kentucky who had his 2m
handheld confiscated by police because they thought it was a "scanner."

And have you polled this newsgroup to see if the members even care if you stay or leave? I was responding politely to messages posted in this thread. You are the one who decided it was your responsibility to tell me to go away. And you then have the nerve to call me a troublemaker. Show me one place in this thread where I have been rude to any person (other than to a person that was first rude toward me - such as yourself).

Then you have not been looking, Rolling. I have posted hundreds of messages to this newsgroup over the last several years, on nearly all subjects (antennas, grounding, power supplies, radio cloices, coax, microphones, and many other topics). Perhaps it is because you spend so much time looking over political issue related messages that you only see the massages I post in those threads.

I don't have time for this petty crap, Rolling. If you want to add something worthwhile to this discussion, then I'll be glad to hear your comments. Otherwise, I have better things to do. I hope you'll pardon me if I simply ignore your nonsense in the future.

We have nothing to base any of this discussion on. At the present time, police are not involved in the policing of radio useage, so there is no evidence either way whether a simple interference complaint is grounds to search a premises (I don't think there has ever been a specific case to base an opinion on - we can only form opinions based on cases that are similar).

We'll have to wait until actual local laws, under possible future legislation, are passed to see if a complaint of interference is enough to warrant a search of the radio equipment being used. Only then will we see whether local law enforcement will use FCC guidelines for entering a premise or will develop their own guidelines that give them more leadway.

Until then, any discussion of this is simply opinion and rhetoric.

Again, the recently proposed legislation would have only allowed the
local authorities to take action if there is a obvious violation, such
as an illegal linear. If the violation is not obvious, the FCC would
have still remained as the untimate authority.

You do not give local police enough credit. It would not be that
difficult to write guidelines that would make it very clear how a linear
differs from a power supply (for example). Obviously, the one major
difference is that a power supply does not have coax connectors.

It would be equally easy to write up a list of the names of radios
that are illegal to use in the CB band. Therefore, a simple radio call
to the station for verification would provide an answer in most cases.

In the case of a licensed station, it is a simple matter to present a
license when requested. Again, the recently proposed legislation would
not have allowed local authorities to take action against licensed
operators. The FCC would still have remained the untimate authority
over licensed stations.

They do it but the cases get thrown out all the time even for drugs. To many people have made the annonomous calls just to harass someone else. A single annonomous phone call will not get it done there must be other compelling evidence. To many local governments have been sued and too many judges have had there rulings overturned over this. Even for the FCC to act on a complaint they must get other evidence for a warrant and have a Federal Marshal serve it. If you make them go to this much trouble you can bet they are going to nail you. As far as this being a free country it is as free as those who would abuse others rights allow. Wenever a law is made to protect someones rights by its nature it is limiting that persons rights and the rights of others.

Dwight thinks all police are smart, honest and operate within the law.
Dwight thinks all police and government agencies are not
capable of stretching their authority, flexing their muscle, and
taking advantage of their power. Dwight would give these agencies
any power that they would deem necessary because Dwight believes
in an open door policy toward these agencies. Anything he is told by
anyone in a position of authority is OK with Dwight. Dwight never
questions authority, or question the ramifications of giving
authority. Dwight thinks that if these agencies do wrong it
would be an easy thing to correct.

Dwight and his way of thinking are the enemy.

I'm in the shop now, to fix that freq counter prob. (stays on
dim) replace fet-501 and fet-502 in the freq. counter module.
that should make it normal again...

Try a pager its cheaper than a cell bill and cheaper than Two CB's and Amps ...Cities are tough on a CB's range at 4 watts. But if you like amateur radio then try the CB's. they will work most of the time except in a skip.

"Larry Diehl" <ldiehl@iname.com> scribbles in a note. news:XMeF4.26545$Ig.116221@news1.rdc1.tx.home.com...

Let's see.....we are in a technical hobby.....we have at least a little computer expertise because we are here.....and we can't do a filter???????
I guess we are in worse shape that I thought.

"D. Stussy" <kd6lvw@bde-arc.ampr.org> wrote in message news:Pine.LNX.4.10.10003310429510.528-100000@dns.bde-arc.ampr.org...
